

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. ## PREFACE

TO THE

*SECOND EDITION.*

---

**T**HE author of the following Inquiry has attended for a course of years to the progress of the national debt, from the interest which he felt as a member of the community in a subject of so much importance, and which has now assumed so alarming an aspect. As he has observed that many persons, in general well informed, were imperfectly acquainted with the facts, and entertained crude views of the principles of finance, he trusts that what he now submits to the public may not be altogether useless.

In the first part, he lays down and enforces some general principles of finance. A person unacquainted with the management of our national debt, may blame him for bestowing labour to prove *truisms*, or principles which cannot be controverted; but to those who know that our financial measures have been conducted for a course of years upon opposite principles, the arguments adduced will not appear unnecessary.

In the second part, a particular detail is given of the origin, progress, management, redemption, and present state of the national debt. A part of these facts is generally known ; but as few are possessed of full information on the subject, a publication of this kind seemed wanted. The author could not well have fixed upon a certain degree of information as what his readers already possessed, and supplied the remainder. Had he attempted to do so, his work would have presented a mutilated appearance, without being a great deal shorter. He has therefore drawn up such a narrative as may communicate all necessary information to a young person or a foreigner, who has no previous knowledge of the subject.

The materials for the statements previous to the year 1786, are drawn from the best authorities that could be procured ; and, if not altogether correct, at least come near to the facts.— Those since 1786, are taken from the official papers presented to the House of Commons, and the acts of Parliament relative to finance. The author cannot expect that, in so great a variety of figures and statements, no error has been committed : but he trusts that the errors are neither numerous nor important.

In the third part, the propriety of the measures adopted in the management of our finance, is examined. It cannot give any reasonable ground of offence, that the plans of respectable authors,

authors, and the measures of eminent statesmen, are discussed with freedom. The author is not conscious of having censured any person with asperity: But wherever he thought their opinions erroneous, or their measures improper, he was under the necessity of assigning his reasons for doing so.

In this edition, the statements are continued to the present time, and have been carefully revised, and some errors corrected. An account and examination of Mr. Vansittart's plan of finance, adopted in the operations of the year 1813, is added;—also some general observations on sinking funds. An Appendix is subjoined, containing an account of the several stocks,—of the East India Company,—and of the manner of transacting loans, and transferring stock;—and several additional Tables are inserted in the concluding Appendix.

---

### POSTSCRIPT.

IN this third edition, a fuller detail is given of the progress of the national debt before the French revolution. Some account of this part of the work will be found in Note XII.

The Tables and calculations are brought up to 1st February, 1817, and a sketch of the transactions

transactions since, added in a Postscript. An additional Table is inserted, exhibiting the operations on the present plan of finance, since its commencement in 1813; and various articles, containing information on points connected with the subject, are introduced.

To accomplish all this, and accommodate the whole to a time of peace, many alterations have been necessary. We are aware, that such alterations, in subsequent editions, are not in general allowable; but, in a work of this kind, they must be admitted.

We consider it as an imperious duty, if, on reviewing a subject, there appear cause to alter an opinion formerly given, in whole or in part, to acknowledge it, and assign the reasons. Accordingly, we have modified, though not entirely altered, the opinion given in our former editions, Part III. Chap. VI., in regard to the system of funding by an increase of capital.

AN  
INQUIRY  
CONCERNING THE  
NATIONAL DEBT.

---

INTRODUCTION.

**THE** decision of national contests, in ancient times, depended upon the numbers, courage, and military talents of the contending nations. The invasions of barbarous hordes, destitute of wealth, and impelled to undertake these invasions by poverty, have often accomplished the subversion of large and wealthy nations, amply provided with all the means of warfare that wealth can furnish, and long renowned for military prowess ; but fallen from their former pitch of valour, in consequence of the luxury which wealth gives rise to. In this manner were the Roman empires, western and eastern, subverted ; and in this manner have the opulent and luxurious nations of the East been repeatedly subdued by indigent and hardy barbarians.

The great alteration in the state of mankind in modern times, and the changes introduced into the art of war, have, in some measure at least, transferred the decision of national contests to a different principle. Money is said to supply the sinews of war ; and gold, rather than steel, is accounted the instrument which leads to victory. It cannot be doubted that this is true in a certain degree, although not to the extent that some maintain.

In the middle ages, when the ferocious spirit which had formerly animated the northern nations, had in some degree subsided ; while commerce was still in its infancy, and little national wealth accumulated ; wars were carried on languidly, and were generally of short duration. Their operations were frequently interrupted by truces, and sometimes discontinued through mere feebleness. A victorious army, conducted by a warlike leader, was obliged to stop short in a successful career, from want of resources.

It is not our object at present to inquire into the sources of weakness, and incapacity for foreign expeditions, inherent in the feudal system, then more or less established in every nation in Europe. Under any system of government, the general wealth was insufficient to supply the expense of those extensive and long continued wars,  
which

which have been waged in later times. The revenue of the sovereign was derived partly from lands reserved as a royal demesne, and partly from feudal casualties, and afforded a slender provision for maintaining the royal state, and defraying the ordinary expenses of government; but was altogether inadequate to the support of numerous and permanent armies. Supplies from the people were obtained to a certain extent; but the people neither possessed the means, nor had acquired the habit of granting liberal supplies. Princes, under any emergency, real or supposed, or actuated by any scheme of ambition, had recourse to the measure of borrowing. The loans which they raised were partly compulsory; and as the repayment was ill secured, the rate of interest was high. Sometimes the jewels of the crown were pledged, and sometimes the crown lands were mortgaged. In this manner, the revenues of most of the powers of Europe were anticipated and encumbered.

This irregular mode of borrowing gradually gave way to one more systematic; which has now been carried by this nation to an extent far beyond what was ever known in any other age or nation; far beyond what any person at its commencement, or even after its considerable advancement, believed to be practicable. This system is still expanding. The public debt, which

was inconsiderable at the Revolution, has increased, in little more than a century, to its present magnitude. The increase during every reign, except the pacific reign of George I. has been greater than during the preceding. The increase during every war has been greater than during the preceding. The increase during the latter period of every war, except the late one, has been greater than in the earlier period. The increase, by every national exertion, has been greater than administration held forth when the measure was undertaken. The part of the national debt paid off, in intervals of peace, has borne a small proportion to that contracted by the preceding war. No man can foresee how far this system may be carried, or in what manner it will terminate.

It, however, presents an aspect sufficiently important and alarming to command our most serious attention. In various periods of its progress it has obtained the attention, perhaps of statesmen, who were unwilling to publish all they thought; certainly of men who were skilled in the principles of political economy, and well acquainted with the state of our finances; and none of these, it is believed, have considered it in a trivial point of view. Perhaps the unexpected magnitude to which the public debt is carried, and the ease with which the funds for its annual augmentations are procured, have contributed

puted of late to blunt the public feelings on this important subject.

Various schemes have been proposed, by means of sinking funds, for diminishing, and, in course of time, discharging our national incumbrances; and some of these have been carried into execution to a certain extent. The confidence placed in the efficacy of these schemes has contributed further to ease the alarm which the magnitude of the public debt would otherwise have produced. Their principles and probable result ought to be scrutinized in the strictest manner. If they be adapted to the relief and ultimate discharge of our national burthens, contracted under the system of expensive warfare in which we have been engaged, let us enjoy the comfort, which such a prospect affords, upon rational grounds. If they be, in whole or in part, deceptive, it is proper that the deception should be pointed out, and that we should know the hazards and the limits of our financial system. If we shut our eyes to national dangers of whatever kind, we are most likely to be overwhelmed by them. If we see them in their true colours, we stand the fairest chance of encountering them with success. If a candid enquiry into this subject should lead to results less favourable than those which have been held forth by high authority, and are readily adopted by the sanguine disposition of the public,

lic, the enquirer performs the part of a true friend to his country, and ought not to be charged as acting from factious motives.

In the following Inquiry we propose,

First, To lay down some general principles, which, if established, would lead to general conclusions, concerning our financial system, and in a great measure, supersede the necessity of examining particular plans which have been proposed or adopted.

Secondly, To give a narration of the manner in which we have proceeded in conducting and accumulating our public debt, and a statement of its present amount and annual charge, and an account of the plans which have been proposed or adopted for its discharge, and their operation. The necessary tables in illustration of these particulars will be subjoined in an Appendix.

Thirdly, By means of the general principles, to scrutinize the efficacy of the schemes to which we trust for the relief of our national burthens ; and examine the propriety of the methods we have adopted in conducting our financial operations.

## PART I.

.....

### GENERAL PRINCIPLES OF FINANCE.

I. THE annual income of a nation consists of the united produce of its agriculture, manufactures, and commerce. This income is the source from which the inhabitants derive the necessaries and comforts of life; distributed, according to their stations, in various proportions; and from which the public revenue, necessary for internal administration, or for war, is raised.

II. The portion of national income which can be appropriated to public purposes, and the possible amount of taxation, is limited; and we are already far advanced to the utmost limit.

III. The amount of the revenue raised in time of peace, ought to be greater than the expense of a peace establishment, and the overplus applied to the discharge of debts contracted in former

mer wars, or reserved as a resource for the expense of future wars.

IV. In time of war, taxes may be raised to a greater height than they can in peaceable times ; and the amount of the additional taxes, together with the surplus of the peace establishment, should be applied for defraying the expense of the war.

V. The expense of modern wars has been generally so great, that the revenue raised within the year is insufficient to defray it. Hence the necessity of having recourse to the system of funding, or anticipation. The sum required to complete the public expenditure is borrowed on such terms as it can be procured for ; and taxes are imposed for the payment of the interest ; or perhaps to a greater extent, with a view to the gradual extinction of the principal.

VI. In every year of war, where this system is adopted, the amount of the public debt is increased ; and the total increase of debt during a war depends upon its duration, and the annual excess of the expenditure above the revenue.

VII. In every year of peace, where the excess of the revenue above the expenditure is properly applied, the national debt is diminished ; and the  
the

the amount discharged during any period of peace, depends upon the length of its continuance, and the amount of the annual surplus.

VIII. If the periods of war, compared with those of peace, and the annual excess of the war expenditures, compared with the annual savings during the peace establishment, be so related, that more debt is contracted in every war than is discharged in the succeeding peace, the consequence is a perpetual increase of debt; and the ultimate consequence of a perseverance in this system must be, its amount to a magnitude which the nation is unable to bear.

IX. The only effectual remedies to this danger, are the extension of the relative length of the periods of peace; frugality in peace establishment; lessening the war expenses; and increase of taxes, whether permanent, or levied during war.

X. If the three former of these remedies be impracticable, the last affords our only resource. By increasing the war taxes, the sum required to be raised by loan is lessened. By increasing the taxes in time of peace, the sum applicable to the discharge of debt is increased. These measures may be followed to such an extent, that the savings in time of peace may be brought to an equality with the surplus expenditure in time of war,

war, even on the supposition that the periods of their relative duration shall be the same for centuries to come, that they have been for a century past.

XI. When taxation is carried to the extent just mentioned, the affairs of the nation will go on, under the pressure of existing burthens; but without a continual accumulation in debt, which would terminate in bankruptcy. So long as taxation is below that standard, accumulation of debt advances; and it becomes more difficult to raise taxation to the proper height. If it should ever be carried beyond that standard, a gradual discharge of the existing burthens will be obtained; and these consequences will take place in the exact degree in which taxation falls short of, or exceeds the standard of average expenditure.

XII. The excess of revenue above expenditure is the *only real sinking fund* by which public debt can be discharged. The increase of the revenue, and the diminution of expense, are the only means by which this sinking fund can be enlarged, and its operations rendered more effectual: And all schemes for discharging the national debt, by sinking funds, operating by compound interest, or in any other manner, unless so far as they are founded upon this principle, are *illusory*.

THE greater part of these propositions are so incontrovertible, that it may appear superfluous to adduce any arguments in support of them, and the others may be inferred from these, by a very obvious train of reasoning. Yet measures inconsistent with them have not only been advanced by men of acknowledged abilities, and expert in calculation, but have been acted on by successive administrations, annually supported in parliament, and ostentatiously held forth in every ministerial publication. These seem to have gained possession of the public mind, and we hear them daily extolled and confided in by persons, in other respects candid and intelligent. This not only supplies an apology for examining the principles minutely, but renders such an examination necessary.

*I. The annual income of a nation consists of the united produce of its agriculture, manufactures, and commerce. This income is the source from which the inhabitants derive the necessaries and comforts of life; distributed, according to their stations, in various proportions; and from which the public revenue, necessary for internal administration, or for war, is raised.*

IN every nation, a part of the public income must be withdrawn from the use of the inhabitants, and applied to public purposes. This constitutes the national revenue, and is levied from the people by taxes. The amount required for this purpose, even in peaceable times, and when all practicable economy is observed, is considerable. The administration of justice and police, the support of such an army and navy as the present state of surrounding nations renders necessary, and various other objects, require a large expenditure. In time of war, the public expenditure is greatly increased.

This expenditure, however reasonable and necessary, is defrayed by subtracting from the funds which supply the wants of the people, and tends to lessen their enjoyments. Taxation, therefore, although necessary, is not desirable. It may arise to a magnitude which will press severely on the comforts, and even encroach on the necessaries,  
of

of the middling and lower ranks. Unnecessary public expenditure, whether occasioned by engaging in wars which might be avoided, or conducting necessary ones with improper prodigality, or by extravagance in internal administration, is a serious evil to the public.

The proposition here laid down concerning taxation, will not be universally admitted. Taxes are affirmed to be harmless, and even useful, upon two principles. They are said to be a spur to industry; and the money collected is said to be no loss to the community, as it is returned, by various channels, to the people from whom it was raised.

It is foreign to the object of our present inquiry to enter into a full examination of the arguments adduced in support of these opinions; and it could not be done without a full discussion of the principles of political economy.

In regard to the first, we may briefly observe, that the desire inherent in every man to improve his circumstances, is a sufficient and effectual incitement to exertion. The farmer raises all the produce he can from his land. If he be deficient, it arises from want of capital, or of agricultural knowledge. The manufacturer extends his operations as far as his capital, the extent of the market, and the number of hands he can employ, permit him. In time of war, the sums exacted in taxes lessen the abilities, and consequently the exertions

exertions of both. In regard to commerce, the effects of war are various. Many branches are circumscribed, or altogether destroyed. Others go on with increasing alacrity; but taxation is never the cause of their enlargement. The merchant generally advances the tax, and, as this employs part of his capital, he is obliged to circumscribe his speculations. He is afterwards reimbursed, perhaps with profit, by raising the price of his commodities, and thereby devolving the tax on the consumer: but the enhancement of price can never increase the quantity of merchandize sold. The only classes of men upon whom taxation can be reasonably supposed to operate as a spur to industry, are those of the lower order, who earn their subsistence, from day to day, by the labours of agriculture or manufactures. If a man can maintain himself and family by four days work in the week, he will not, it is said, work for six. In regard to those employed in agriculture, this seldom takes place. The unremitted labours of the peasant are obvious to every one. In regard to manufacturers and tradesmen, there is more foundation for the observation. A few intemperate tradesmen, unless compelled by necessity, may spend a day or two weekly in the ale-house. But it is notorious, that the greater number continue regularly at their work, except upon rare occasions; and not a few wear out their constitutions by excessive and too long continued exertions,

exertions. It is a comparatively small part of the taxes which falls upon persons in these stations of life.

The other argument (that taxes are only an imaginary evil, because the money is returned, by various channels, to those from whom it was collected,) is founded upon the principle of the mercantile system, that money constitutes wealth—a principle which has been ably refuted by writers on political economy, and is now generally abandoned. The farmer pays part of his produce, or its value, in taxes, and has so much the less for other purposes; that is, he is so much poorer. The money may be brought back to him to purchase another part of his produce for the consumption of the army or navy; but the same men who constitute the army and navy must have been maintained, and his produce would have found a market. Even if money were admitted to constitute wealth, it is not true that all the money raised by taxes returns to those who pay them. A large part is sent abroad for subsidies to foreign powers, and for the support of armies employed in foreign service.

## II. *The*

*II. The portion of national income which can be appropriated to public purposes, and the possible amount of taxation, are limited; and we are already far advanced to the utmost limit.*

THE truth of the first part of this proposition is so obvious, that it may seem unnecessary to enlarge on it. Yet the unexpected increase of the public revenue has drawn off the attention of many from its ultimate limit. They will not affirm that it may be extended to an indefinite magnitude; but, as it has been carried so much farther than our fathers, or we ourselves in early life, believed to be practicable, they maintain, that its future extension may be greater than any one now conjectures; and that its reaching a maximum is so distant an event, that the prospect of it ought not at present to have any influence on our public measures.

It may, however, be evinced, that a large proportion of our resources is already exhausted; and that the continued increase of revenue, at a rate equal to what has taken place these last twenty years, cannot be carried on for a long term of future years.

The whole annual income cannot, under any exigency, be appropriated for public revenue. A sufficiency must be reserved for supplying the necessities of life. The surplus only can be applied

plied to public purposes, and the proportion which can be actually applied to them for any length of time falls much below this limit.

Taxes upon articles of luxury, if raised beyond a certain pitch, lessen their consumption, and become unproductive. The same holds in some degree with regard to taxes on every article not indispensably necessary; and our government has hitherto wisely been sparing of taxes on the necessities of life. Taxes upon commerce, for the same reason, have their limit; and it seems to be believed, that the system of indirect taxation, in some respects the most eligible, is now carried nearly as far as it can be done: For, instead of raising all the revenue wanted by taxes of this kind for some years past, recourse has been had to the system, little used before, of direct taxation.

Our direct taxes are of two kinds. The first is a tax upon legacies and successions in case of intestacy, being a certain proportion of the moveable property left by every person at his death, varying according to the propinquity of the successor to the deceased, and amounting to ten per cent. on property left to remote relations or strangers. Of the same nature is another tax, a stamp duty on the probates or inventories of personal estates, wherein no abatement is allowed, in whatever relation the successor may stand to the deceased.

The second and more considerable branch of  
D direct

direct taxation is that of a certain proportion of every man's income, from whatever source it arises. This has been considered as a war tax, and was first imposed in 1799, under the name of the income-tax, at the rate of ten per cent. After a short intermission during the peace which succeeded the treaty of Amiens, it was revived in 1804, under the name of the property-tax, at the rate of five per cent. ; raised in 1806, to six and one-fourth per cent. ; and in 1807, to ten per cent. ; at which rate it continued until the conclusion of the war. Incomes under L.50, arising from annuities or professional gains, were exempted ; and incomes of that sort under L.150, were entitled to certain deductions according to an established scale ; but every income, however small, arising from capital of any kind, was subject to the full tax of ten per cent. The assessed taxes raised upon houses and windows may also be referred to the head of direct taxation.

The amount of property-tax levied, at an average of three years preceding 5th January, 1813, was L.13,281,509 ; and the whole average amount of taxes, permanent and annual, raised during these years, after deducting drawbacks, &c. was L.64,860,192. If the property-tax be ten per cent. upon the general amount of income, the whole taxation is nearly fifty per cent., or one-half. The lower classes indeed were exempted, or relieved in a certain proportion from the property-tax ;

tax ; and it is probable, that among the higher classes who ought to have paid ten per cent. considerable evasions took place: But as the higher and middling ranks pay almost the whole of the assessed taxes, and a larger proportion of the taxes on consumption, their taxation cannot fall much below one-half of their income ; and therefore we are already far advanced to the utmost limit which taxation can ever reach. The lower classes indeed pay a smaller proportion ; but it will hardly be thought prudent or practicable to raise the taxes upon them in a higher proportion than is done upon their superiors.

If we be nearly right in this view, it is impracticable, in the present state of public wealth, to double our present revenue by increased taxation ; and it would be a measure of great difficulty and danger to enlarge it by one half.

We do not, however, affirm, that the nominal, or even the real amount of our revenue, can never, at any future period, amount to double of its present magnitude. A nominal increase may arise from the depreciation of the value of money, which has taken place rapidly for a century past, and is probably still advancing. This depreciation is necessarily accompanied by a nominal increase of public expenditure ; as every article which government has occasion to purchase, and the pay of every person in civil or military employment under government, must be increased in the same

proportion. The increase, therefore, of nominal revenue, while its effective power remains the same, affords no advantage to the public.

The increase of the money price of commodities arises from two distinct sources, of which, although the effects be blended, the principles, when analyzed, are of a very different nature. The first is the relative increase of the circulating medium, compared with the mass of commodities in circulation. This, so far as it arises from addition to the quantity of gold and silver in circulation, although it first takes place in the nations that are proprietors of the mines of these precious metals, has a tendency, in no long time, to diffuse itself, nearly equally, among all nations connected by a regular commercial intercourse. The effect of it is to subject every creditor, public or private, to a loss in proportion to the extent of the deterioration of the value of money. It consequently discharges part of the public debt; but it produces little effect upon the actual revenue, or the state of commerce. An increase of circulating medium, by the artificial means of paper credit, has the same effect upon the price of commodities, and upon the property of creditors, as an increase of circulating coin: But this, although adopted under one form or other by most mercantile nations, has not the same tendency to equalization, and may occasion considerable changes in the state of commerce; always to the  
disadvantage

disadvantage of the nation where fictitious circulating medium most prevails.\*

The second cause of the increase of the price of commodities, is the taxes imposed upon manufactures, of which we have now a great variety, and upon merchandize imported. The amount of the tax is incorporated with the natural price of the commodity, and paid along with it by the consumer. It is nearly the same as if the consumer paid the natural price of the commodity to the manufacturer or importer, and paid at the same time a tax to government, in proportion to the extent of his consumption. Something of this sort actually took place in what was called the Commutation Tax. When government found it expedient to repeal a part of the duties upon tea, it imposed a tax upon every person for the quantity of tea he was conjectured to consume, as ascertained by the number of windows in the house he possessed. This part of the price of commodities, unless drawn back upon exportation, operates as an obstruction to commerce; and even when drawn back, the relief is only partial. For it is not merely the amount of the tax which the manufacturer must lay upon his commodities: He must have an allowance for the advance of money, and for the additional wages paid to his workmen to enable them to pay the taxes on what they consume. Creditors, public  
or

\* See Note I.

or private, do not sustain any special injury by this part of the increase on the price of commodities. They only contribute their share, along with others, to the increased exigencies of the public.

A real increase of revenue may arise from an increase of national wealth ; and this increase of revenue will be obtained by the existing taxes becoming more productive, without the imposition of new ones. Our wealth has increased to an amazing magnitude, and we do not affirm it has reached its utmost limit. But, considering the extent to which our commerce, a chief source of our wealth, is already carried, it is not reasonable to depend upon its further increase, under growing burdens, as an inexhaustible source for supplying all our exigencies in a state of continued warfare.

*III. The amount of the revenue raised in time of peace, ought to be greater than the expense of a peace establishment, and the overplus applied for the discharge of debts contracted in former wars, or reserved as a resource for the expense of future wars.*

THE propriety of this conduct is obvious, and it has been adopted to a certain extent, but has not been followed out with important efficacy.

In the earlier part of our history, the ordinary  
revenue

revenue was hardly sufficient for the ordinary expenditure ; and parliamentary supplies, in time of peace, were rarely granted. Henry VII. was the last, and, we believe, the only English king, in modern times, who amassed a considerable treasure by a parsimonious and oppressive administration, during a reign the greater part of which was passed in peace. This treasure was dissipated in a short time by his successor. It is unnecessary to enter into a detail of the financial measures of each reign, from that time to the Revolution. Although the period, compared with that which followed, was on the whole pacific, it never afforded any surplus of revenue.

The nature and efficacy of the different kinds of sinking funds established since the Revolution, will be considered in the third part of this inquiry.

The amount of the payments of the public debt, in time of peace, subsequent to the Revolution, has been as follows :

During the peace which followed the treaty of Ryswick, being a period of four years, from 1697 to 1701, there was discharged L.5,121,040 of funded debt, being L.1,280,260 annually, at an average ;\* and at the rate of L.5.95 per cent. on the public debt existing at the termination of the preceding war.

During the peace which followed the treaty of Utrecht, being a period of twenty-six years, from

1713

\* See Part II. Chap. I.

1713 to 1739, there was discharged L.4,190,734, of funded debt, being L.161,182 annually, at an average ; and at the rate of L.0.91 per cent. of the debt existing at the termination of the preceding war.

During the peace which followed the treaty of Aix-la-Chapelle, being a period of eight years, from 1748 to 1756, there was discharged L.4,961,560, being L.620,195 annually, at an average, and at the rate of L.0.78 per cent. of the debt existing at the termination of the preceding war.

During the peace which followed the treaty of Paris, being a period of twelve years, from 1763 to 1775, there was discharged L.10,281,795, being L.856,816 annually, at an average, and at the rate of L.0.62 per cent. of the funded debt existing at the termination of the preceding war.

During the peace which followed the American war, being a period of ten years, from 1783 to 1793, there was redeemed by the commissioners for the reduction of the national debt, L.10,242,100, being L.1,024,210 annually, at an average, and at the rate of L.0.43 per cent. of the funded debt existing at the termination of the preceding war. But as the unfunded debt was increased during the peace, the discharge of debt was only L.5,732,993, being L.573,299, at an average, and at the rate of L.0.23 per cent. of the whole debt existing at the termination of the preceding war.

No

No debt was paid off in the short space which followed the treaty of Amiens in 1802.

*IV. In time of war, taxes may be raised to a greater height than in peaceable times ; and the amount of the additional taxes, together with the surplus of the peace establishment, should be applied for defraying the expenses of the war.*

It is not intended to affirm that the power of a nation to bear taxes is increased in consequence of its being engaged in war. The contrary is always the case. Commerce, manufactures, and agriculture, are the sources from which all revenue is derived. The two former may be ameliorated in certain branches by war, but they are depressed on the whole ; and agriculture also suffers in some degree. But the necessity of the case, real or supposed, has a powerful influence on the public mind, and reconciles the community to submit to privations, which in peaceable times would be accounted insupportable.

Before the introduction of the funding system, national exertion was limited by the revenue which could be raised within the year : but so soon as that system was established, the selfish practice of devolving the burthens, arising from the exigencies or passions of the present age, upon posterity, was adopted in its full extent. The

first attempt to defray any considerable part of the war expenses by taxes raised within the year was under Mr. Pitt's administration, in 1798, when the aid and contribution tax was imposed, being a large addition to the former assessed taxes on houses, windows, servants, horses, carriages, &c. regulated by an increasing scale according to the amount of the former assessment.

This tax, not succeeding to expectation, only subsisted one year, and was succeeded by the income and property taxes, already mentioned. Another war tax, first imposed in 1798, was an additional duty on all goods exported and imported, partly according to a table, and partly at so much per cent. on their real value, as ascertained by the oath of the merchant, together with a tax upon the tonnage of shipping. This tax is sometimes called the convoy tax, being considered as a compensation for the security which our trade receives in time of war by sailing with convoy. These, together with additional excise duties, were imposed during the continuance of the war, and amounted in 1812 to L.21,838,166, and in 1815 to L.24,213,930, being about one-third of our whole taxation.

The property-tax, and some other of the war taxes, have been discontinued since the peace. Some of them have been continued for a limited time, and others rendered perpetual. How far the promised relief will extend, and prove permanent, is still among the secrets of futurity. Past  
experience

experience shows, that taxes have been often imposed at first for limited terms, and afterwards rendered perpetual; and the incroachments that have been already made upon the war taxes, do not promise fair for their speedy removal. In the years 1798, 1799, 1800, a sum of no less than L.56,445,000 was charged upon the war taxes, and distinguished from what was then called the *permanent* funded debt, being intended to be discharged by continuing the war taxes after the restoration of peace. This system, however, was abandoned under Mr. Addington's administration, and the above sum consolidated with the rest of the funded debt. The war taxes were discontinued during the short peace. The system adopted by Lord Henry Petty, in 1807, would have entirely absorbed the war taxes for an indefinite period, if it had been continued; and during the only year it subsisted, the war taxes were mortgaged for the interest and sinking fund of the loan of that year, for a term of at least fourteen years, to the extent of - - - L.1,200,000 and in 1809 the charges of the loan were again laid upon the war taxes, amount, - - - - - 1,040,000

---

Sum for which the war taxes are pledged, - - - - - L.2,240,000  
 The war taxes are also charged with the interest, &c. of the loan 1811, but certain additional duties  
 E 2 imposed

imposed that year are added to the war taxes, which are expected not only to defray that charge, but to afford a surplus. The measure, however, of blending the war taxes in this manner, with the general revenue, is not favourable to the prospect of their speedy removal.\*

*V. The expense of modern wars has been generally so great, that the revenue raised within the year is insufficient to defray it. Hence the necessity of having recourse to the system of funding, or anticipation. The sum required to complete the public expenditure is borrowed on such terms as it can be procured for ; and taxes are imposed for the payment of the interest ; or perhaps to a greater extent, with a view to the gradual extinction of the principal.*

VARIOUS causes may be assigned for the increased expense of war in modern times ; the nature of our military weapons ; the entire separation of the character of the soldier from that of the citizen ; the extensive system of colonization and foreign settlements, in consequence of which, a national contest, which a few centuries ago would have been decided by a battle on the frontiers of the contending nations, now extends the ravages of war to every corner of the globe :  
And

\* See Note II.

And since the system of the balance of power has prevailed, large sums have been granted by more opulent states, as subsidies to others supposed to be interested in the same common cause. While these and other causes have led to great expense, the increase of national wealth has supplied the means; and the rulers of this nation in particular, by a strict adherence to public faith, and by a well regulated system of transfer, have been able to draw forth a large proportion of the wealth of their subjects, and a share of that of foreigners, for the exigencies of the public. The progress of our public debt, and manner of conducting it, will be detailed in the second part of this inquiry.

*VI. In every year of war, where this system is adopted, the amount of the public debt is increased, and the total increase of debt during a war depends upon its duration, and the annual excess of the expenditure above the revenue.*

*VII. In every year of peace, where the excess of the revenue above the expenditure is properly applied, the national debt is diminished; and the amount discharged during any period of peace depends upon the length of its continuance and the amount of the annual surplus.*

VIII,

**VIII.** *If the periods of war compared with those of peace, and the annual excess of the war expenditure compared with the annual savings during the peace establishment, be so related, that more debt is contracted in every war than is discharged in the succeeding peace, the consequence is a perpetual increase of the debt; and the ultimate consequence of a perseverance in this system must be its amount to a magnitude which the nation is unable to bear.*

THE two former of these propositions appear incontrovertible, and the first part of the other follows from them as a necessary consequence.

The doctrine of our national debt amounting to a magnitude which the nation is unable to bear, will not be easily relished. We are accustomed to hear of our inexhaustible resources, and we have experienced the amount of our debt to an amazing magnitude with less pressure than might have been expected.

The observations already made in illustration of the second proposition show how far our resources are already exhausted.

In Part II. Chapter I. there is given a statement of the amount of the funded debt at the commencement of each war, and of each peace, from the Revolution to the year 1816, inclusive, being a period of 128 years, and the amount of debt, contracted in each period of war, and discharged

charged in each period of peace. The number of years of war in that period is 66, and those of peace 62. But the duration of war expenditure compared with that of peace establishment will be found considerably greater than that proportion ; for,

1st. A long time is required at the termination of a war, before affairs can be brought to the situation of a peace establishment, and a large expense is incurred during that period. If we add a year of war expenditure to the duration of each war on this account, we shall not go beyond the fact.

2d. Besides the wars enumerated in the statement, the nation has been put to expense by several armaments, when national disputes assumed the appearance of war, although they were adjusted with slight or no hostilities. Something of this kind occurred in regard to Spain oftener than once in the early part of the 18th century, and again with the same power, in 1770, from a dispute concerning the Falkland islands in the south extremity of South America ; and in 1790, from a dispute concerning Nootka Sound in the northern extremity of North America. When these circumstances are attended to, the period of war expenditure will be found considerably greater than that of peace establishment.

The whole debt contracted during 66 years of  
war

war is L.802,819,790, being L.12,163,936 annually, at an average.

The whole debt discharged during 62 years of peace is L.44,837,399, being L.723,814 annually, at an average.

But the average sums are not those which chiefly claim our attention. It appears by inspection of the table how rapidly the debt contracted in the latter part of the period has increased; and future events will more probably assimilate to that than to an earlier period.

The whole debt contracted during the period of war is to the whole debt discharged during the period of peace, as 17.9 to 1.

The average debt contracted annually in war is to the average debt paid annually in peace, as 16.8 to 1.

It is maintained by many that there is no cause to be alarmed at the magnitude of the national debt, because the greater part of the national creditors are our fellow citizens, and a debt owing by one part of the community to another is in effect no debt at all. Some go as far as to maintain that the national debt is a part of our national wealth, and ought to be reckoned, along with the value of our commerce, manufactures, and agriculture, in estimating the amount of the national capital.

With these last we shall not undertake to argue.  
Towards

Towards the others we shall partly concede the point. But when every reasonable concession is made, enough still remains to place the magnitude of the national debt in an alarming point of view.

The large amount which the public have been able to borrow is a proof of a large capital existing among the community, and affording a surplus after the demands of commerce, manufactures, and agriculture, in their actual state, are supplied. But we are not warranted to affirm that the existence of a large public debt is necessary for employing this capital, or that it could not have been invested in various ways to the further increase of our public wealth in its genuine sources. This would have diffused an additional share of the comforts of life through every rank of society. The taxes, which the public debt requires, lessen these comforts. The wars in which money has been expended, if not unnecessary, are certainly unprofitable. The interest of the public debt, at least of a large part, is drawn from the profits of the industrious part of society, and paid to the idle and luxurious. It is drawn from the merchant, the manufacturer, the farmer, and paid to the stockholder. The amount so drawn may be augmented till it occasion the ruin of those who pay it, and ultimately the ruin of the stockholder, involving the whole community in distress and confusion.

Perhaps some think, though they seldom venture to say, that matters may be restored, by means of a public bankruptcy : and that this nation, after such a measure, will retain the same degree of internal wealth, and support the same strength and importance in its relations to foreign states, as if no national debt had ever existed.— It will not be necessary to enter into a long refutation of this opinion. The extent of distress attending a public bankruptcy, whether brought on systematically, or overtaking us as the necessary consequence of our being overwhelmed with the magnitude of our debt, would be so great ; the present overthrow of every thing valuable so compleat ; and their future extrication so uncertain, that we can hardly conceive a greater public evil. Among its probable consequences we may reckon internal insurrections, and foreign invasions by rival or hostile nations, taking advantage of the time of our distress and weakness.

Every friend to Britain, every friend to humanity, must deprecate such an event. And a proper sense of the calamities in which it would involve us, should keep us at a cautious distance from the verge of so dreadful a precipice.

“ Does the circumstance of our creditors being our fellow citizens afford no relief to the magnitude and burthen of our national debt, and are we in the same situation, as if we were indebted to foreigners ?” We do not affirm so.

So

So long as public faith is maintained, there are two ways in which the burthen of our debts is alleviated by having our countrymen for our creditors.

1st. A part of the taxes raised for the payment of interest, and also for other purposes, falls upon the stockholder, and this part is more considerable as the national debt increases, and bears a greater proportion to the whole of the national revenue.

2d. The expenditure of the stockholder increases the profit of the industrious citizen.

But allowing for these advantages, still, the greater part of the burthen falls upon the industrious, and it receives only a partial relief from any advantage resulting from the expenditure of the idle.

It is argued by those who still retain the generally exploded opinions concerning money, that all the money raised in taxes, at least all that comes to the stockholder, is spent among those who pay it, and that therefore it is no loss to them. This is no less absurd than the defence of a house-breaker, who being convicted of carrying off a merchant's money, should plead that he did him no injury, for the money or part of it would be returned to him in purchasing the commodities he dealt in.

Were a national bankruptcy ever to take place, perhaps less evil might attend it if our creditors

were foreigners. It would not in that case occasion internal distraction and convulsion. The evil to be dreaded would be war with the injured nations. And as we would retain our full national strength, and our resources would then be unincumbered with debt, they might not find it prudent to attack us. However, as we hold a breach of national faith in detestation, we recollect with pleasure, that the far greater part of our creditors are our fellow citizens.\*

In part of the foregoing argument we have spoken of the industrious citizen and the stockholder as being separate persons, and, in some respects, of opposite interests. In many individuals these characters are blended : But, in most cases, the one or the other character predominates, and if, in a few, they be nearly equally balanced, it does not affect the general argument.

*IX. The only effectual remedies to this danger are the extension of the relative length of the periods of peace ; frugality in the peace establishment ; lessening of the war expenses ; and increase of taxes, whether permanent, or levied during war.*

As the object of the present inquiry relates to our national revenue, debt, and resources, we shall avoid, as far possible, the colateral subject of

\* See Note III.

of an examination of the necessity or rashness, the expediency or inexpediency, the justice or injustice, of the wars in which we have been engaged. A wise nation will at all times engage in wars with much circumspection, and terminate them as soon as can be done with safety. If the result of our inquiry should be, that we are not able for another century to carry on our warlike system in a manner similar to that which we have done in the period now reviewed, this furnishes additional reasons for such wise and moderate conduct.

If nations could derive wisdom from past experience, and from the judgment which is formed of many former wars, now that the passions which excited them are subsided, much might be urged in favour of a pacific system. It will be admitted that we have frequently engaged in war for trivial or unattainable objects—that the objects have generally not been attained—that, under pretence of guarding against distant and improbable dangers, we have incurred present and imminent ones—that passion and national pride, rather than rational views of national interest, have been often the ruling principles of our public conduct—that, as we have engaged in war rashly, we have persevered in it with obstinacy, and rejected offers of pacification more favourable than those which we were afterwards under the necessity of accepting.

The view we entertain of any present war is  
seen

seen through a different medium. Every thing valuable to us as men, and as a nation is supposed to be at stake—our national prosperity, our national honour, our national existence—our liberties and lives. No exertion can be too great.—The power of our enemy is so formidable, and his ambition so insatiable, that we have no alternative but to prosecute the war with the utmost vigour, till we lay him prostrate at our feet. No pressure of increasing burthens is to be regarded ; no dread of exhausting our resources entertained. If he make repeated overtures of pacification, they are to be considered as insidious, and rejected with scorn.

While these passions prevail, any arguments against our belligerent conduct, whether drawn from past experience, or from a cool view of present circumstances, will be urged in vain. As the judgment we now form of the measures of our ancestors is different from theirs, it may happen that the judgment formed of the measures of the present day by posterity, or by the younger part of our fellow citizens, when in advanced life, may be different from ours.

Admitting that our situation in the scale of nations, at the termination of the late war, is nearly the same as it has been for some centuries past, can it be reasonably expected that the succeeding period will be more pacific than the past ? We can hardly expect it would. If reason and past  
experience

experience were listened to, they have much to urge : but the world is not now in its infancy, and experience has long furnished the same lessons of the inefficacy and destructive tendency of war, in vain. It is likely the same passions will involve rival nations again in the calamities of war, upon slight or no grounds. If there be any circumstance likely to assuage the passion for war, it arises from the pressure of public debt, a system peculiar to modern times, the effects of which, when carried to its utmost extent, have not yet been submitted to the test of experience.

In regard to the public expense during peace, it was generally believed during the late war that the state of Europe, under any terms by which it could be concluded, would be such as to render it necessary to keep up a higher peace establishment than had been formerly done. And experience since has verified this opinion in its full extent.

In regard to the expense of future wars, it is not in general wise, admitting their necessity or propriety, to be sparing in exertion in those points where the contest is likely to be effectually decided. Our operations ought to be as prompt and vigorous as we can make them. Neither ought we to be sparing in any expense that contributes to the health and comfort of the soldier, the care of the sick and wounded, the comfortable provision for the worn-out and disabled. But there  
are

are other points in which, without enfeebling national exertion, or without encroaching on the demands of humanity, economy may be properly practised. The following questions in regard to the expenses of past wars may be proposed. Have there been no unnecessary and ineffectual expeditions undertaken? Have not considerable armies been kept in places where they could be of little or no use? Has there been no lavish expenditure in fortifications and barracks? Has not the system of increasing the number of our foreign colonies, and consequently the expense of establishments and garrisons, been followed to the utmost extent, and in quarters where it did not weaken our enemy; and where, by employing a part of our disposeable force, it weakened our exertions in points of more importance? Have the national expenses been conducted with all prudent frugality? or have not enormous fortunes been amassed by public contractors? Have not large sums been retained for long periods of time in the hands of public accountants? and have not large sums been ultimately lost by the insolvency of some of these accountants, from whom sufficient security had not been taken? Have not large subsidies been granted to foreign powers whose fidelity we had just cause from experience to distrust, and who actually proved unfaithful?

Most of these questions will be generally answered in the affirmative of misconduct: and yet  
we

we find the estimates of the expense of each succeeding year are formed on a larger scale ; that the execution generally exceeds the estimate ; and that motions for inquiry into the public expenditure and correction of abuses, are generally discouraged ; and that even where abuses in public offices are admitted, speedy and effectual measures are not taken for their correction.

*X. If the three former of these remedies be impracticable, the last affords our only resource. By increasing the war taxes, the sum required to be raised by loan is lessened. By increasing the taxes in time of peace, the sum applicable to the discharge of debt is increased. These measures may be followed to such an extent, that the savings in time of peace may be brought to an equality with the surplus expenditure in time of war, even on the supposition that the periods of their relative duration shall be the same for centuries to come that they have been for a century past.*

THE difficulty and danger of a further increase of our taxes have been already considered. Every new imposition, as we approach the limit of taxation, becomes more oppressive and more unproductive. But if we cannot or will not adopt more frugal or more pacific measures, there is no

alternative but an increase of our taxes to the extent above-mentioned : And, if we cannot bear this increase, it is impossible to escape national bankruptcy.

We are far advanced to the utmost extent to which taxation can be carried : But we have also gone far towards defraying our annual expenses by money raised within the year. During the last ten years, and upwards, though we have been engaged in a war of unprecedented expense, the amount of our taxes has been greater than the expense of the war, but insufficient to answer, along with that expense, the interest of the debt formerly contracted. Taxation is now carried, perhaps, as far as is necessary upon the supposition that the intervals of peace in future will be equal to the time of war. We have been engaged in war for twenty years, with scarcely any interval, and have not yet fully attained the state of a peace establishment ; and some have maintained, that since the former system of Europe was dissolved, there was no *safety* for us but in *perpetual war*. These, if they were consistent, would perceive the necessity of raising our taxes to the amount of our full expenditure. We reprobate the idea of eternal war as barbarous and impracticable : But if we have still the prospect of frequent war, prudence requires us to raise our taxes to the measure of our expenditure ; which, however severe a pressure it may occasion  
at

at present, must, if deferred, occasion a still heavier pressure at a future period, when our public debt is further accumulated.

So long as the practice was followed of defraying almost all the war expenses by loans, and imposing taxes only for the payment of interest, the burthens of the war were so lightly felt, that the national promptness to engage in war was scarcely under any restraint. Now, when a great part of the expense is raised within the year, and much of it by direct taxation, the burthen is far more heavy, and this pressure would go far to indispose the nation for war, except in a situation where the necessity for prosecuting it was considered as great, or where hostile passions were excited to a more than usual height. Still, however, our burthens were not raised to the measure of our expenditure, and therefore the restraint did not operate so far as it ought. We ought to have felt the full extent of our burthens, and then it would have been tried how far our relish for war would continue. Justice to posterity required this.—Every generation has its own struggles and contests. Of these, and of these only, it ought to bear the burthen. We at present labour under a heavy debt contracted by our ancestors, in wars, perhaps unnecessary, certainly arising from causes now past and gone, with which we have no concern; and, under a still heavier one, arising from wars waged in our own days, the burthens of

which, at the time, we were unwilling to bear. Had the debt accumulated in these wars not existed, our present taxes would have been more than sufficient to defray all the expenses of the late war, widely as it was extended, and lavishly as it was conducted.

*XI. When taxation is carried to the extent mentioned above, the affairs of the nation will go on, under the pressure of existing burthens, but without a continual accumulation of debt, which would terminate in bankruptcy. So long as taxation is below that standard, accumulation of debt advances, and it becomes more difficult to raise taxation to the proper height. If it should ever be carried beyond that standard, a gradual discharge of the existing burthens will be obtained, and these consequences will take place in the exact degree in which taxation falls short of, or exceeds the standard of average expenditure.*

*XII. The excess of revenue above expenditure is the only real sinking fund by which the public debt can be discharged. The increase of the revenue, or the diminution of expense, are the only means by which this sinking fund can be enlarged, and its operations rendered more effectual; and all schemes for discharging the national debt, by sinking funds operating by compound interest,*  
or

*or in any other manner, unless so far as they are founded upon this principle, are illusory.*

THE progress and discharge of the debt of a nation are regulated by the same principles as those of an individual; and experience shews, that measures of public finance are often conducted with a degree of imprudence seldom exhibited in the management of private affairs. We may, however, extend our views to a greater length of time, in regard to the former.

It is true that, upon abstract principles, the smallest sum lent out for compound interest will, in length of time, increase to an indefinite magnitude:\* But it is obvious, that the improvement of money in that way would be limited, at a certain amount, by the want of demand from borrowers, and the impossibility of investing it in productive capital of any kind. It is restricted within a much narrower limit by the mutability of human measures, and the actual impossibility of adherence to the same system, conducted by successive trustees through many generations. It is true that if the system were invariably adhered to, the sum would increase at the rate which calculation points out, until it was limited by the impossibility of finding borrowers, or employing it in any profitable manner.

The system of accumulating a national treasure

\* See Note IV.

sure has been long laid aside, and is not likely to be revived. We may therefore dispense with any further consideration of nations storing up wealth, and bestow our attention on the actual case of nations labouring under debt; sometimes endeavouring to discharge it; often obliged to increase it.

Suppose an individual has contracted a certain extent of debt, and afterwards attains to circumstances which enable him to discharge it. If no oppressive and usurious measures be practised against him by his creditors, and if he pay the interest regularly, the sum which he must pay altogether, before he be clear of debt, is the amount of the money he borrowed, and the simple interest of each portion of the same, from the time of its being borrowed to the time of its repayment. Suppose he borrows L.10,000, and that for ten years he pays the interest, but no part of the principal. If the rate of interest be 5 per cent. he pays during that time L.500 annually for interest, or L.5000 altogether; and if, by a sudden acquisition of wealth, he is able to discharge the debt at the end of ten years, he pays exactly L.15,000 altogether. But suppose, by an amelioration of his circumstances, he is enabled to pay L.1000 annually to his creditors, for principal and interest. The first year he pays L.500 for interest, and L.500 towards the discharge of the principal. The remaining debt is L.9500,  
and

and the interest of this being L.475, if he can pay L.1000 next year, he discharges L.525 of the principal, leaving a debt of L.8975. The interest of this is L.448 15s. and next year, by paying L.1000, he discharges L.551 5s. of the principal, and reduces the debt to L.8423 15s. If he continue to act in this manner, the whole debt will be discharged in about  $14\frac{1}{4}$  years; and the whole sum which he pays, including the L.5000 paid during the first ten years, is L.19,250 nearly, being the amount of the principal, of 10 years interest on L.10,000, of 11 years interest on L.9500, of 12 years interest on L.8975, of 13 years interest on L.8423 15s. and so on; altogether, the principal, together with the simple interest of each portion of the same, from the time that the debt was contracted, till the time that portion was repaid. If he can only spare L.750, and therefore discharge L.250 of the principal the first year, it will require somewhat above 22 years to discharge the whole; and if he can only spare L.600 and therefore discharge L.100 of the principal the first year, it will require 37 years. In all these cases, it is the surplus of L.500, of L.250, or of L.100, which the debtor can spare above the interest, that enables him to discharge the principal.

Instead of conducting the business in this manner, he may pay only the L.500 of interest to his creditors, and lend out the other L.500 at interest,  
and

and lend again L.500 more at the end of the next year, and so on, accumulating the sums lent by compound interest, till it amount to L.10,000, and then discharge his whole debt at once. It will require exactly the same time of  $14\frac{1}{4}$  years to accomplish this. If he transact the business himself, the second way will be attended with more trouble, but the result will be the same. If he employ an agent to transact the loans, he will be a loser by following the last mentioned method, to the extent of the fees paid for agency.

If the debtor be able to pay no interest during the first ten years, the creditors will either insist on accumulating the interest with the principal, in the manner of compound interest, or the debtor must borrow annually from other hands, to pay the interest annually to his original creditors, and must also borrow more each succeeding year, to pay the interest of the debts thus contracted. In either way, his debt at the end of ten years will amount to L.16,289, the interest of which being L.814 9s. an annual payment of L.1000 would discharge only L.185 11s. of the principal debt the first year, and would require about 35 years to discharge the whole, whether he pay the L.1000 annually to his creditors to lessen the principal, after payment of the interest, or whether he accumulate the overplus by compound interest till he be able to pay the whole debt at once.

Substitutè

Substitute millions, or tens of millions, or hundreds of millions, for thousands, and the above reasoning is equally applicable to the public debt of a nation.

If the debt be ever discharged, which can only be done by a surplus revenue, and if the business be transacted as private affairs are, where the creditor is entitled to no more than the sum lent, together with the interest, the time required for the discharge of a public debt will be the same as that for a private one, when the proportion of surplus revenue is the same; and this holds whether the surplus be paid annually to the creditors, in discharge of part of the debt, so far as it will go, or accumulated in a sinking fund, in the hands of Commissioners appointed for that purpose.

The whole sum paid to the public creditor, before the debt be discharged, is equal to the sum advanced by him, together with the simple interest of each portion of the same, from the time it was advanced to the time it is repaid, providing the interest be paid regularly from the time the debt is contracted. But if the payment of the interest be suspended for a certain time after the debt is contracted, then the whole sum paid is equal to the principal debt, together with the compound interest of the same, during the period of suspension, and the simple interest of each portion of this accumulated sum, from

the time it is put in a train of payment, till that portion be paid.

But the manner in which our public debt is conducted is greatly more unfavourable to its repayment than in the case of private business. A certain capital in the 3 per cents. or other fund, is assigned to the public creditor for every L.100 advanced, according to the price of the funds at the time, and allowing always a profit to the lender. He is repaid according to the price of the funds at the time of repayment; and as the repayment is in time of peace, when the funds are generally much higher than in time of war, the sum repaid is, in such case, much greater than the sum advanced, together with the interest.

There is generally a colateral circumstance in favour alike of the public and private debtor, which was already mentioned in the illustration of the second general proposition, arising from the alteration of the value of money. In regard to either, if the interval between the time of borrowing and repaying be considerable, the nominal sum paid is likely to be of less real value than a like nominal sum at the time the debt was contracted.

Neither this advantage which the public debt possesses in common with the private one, nor the disadvantage which the public debt labours under from the above mentioned imprudent manner in which it is conducted, has any relation to the

the argument concerning the inefficacy of the sinking fund.

Let us next consider the case of a nation engaged in war, the expense of which it is unable or unwilling to bear during the year. Suppose the annual expenditure of the war, added to the peace establishment and interest of former debts, exceed the present revenue by 11 millions. That sum must be raised by loan, or additional taxes, and should be raised by the latter as far as the nation can bear them.

If no additional taxes be imposed, the annual loans of 11 millions will accumulate against the nation with all the disadvantages of compound interest.

If a sum less than the interest be raised by additional taxes, the loans will accumulate in some degree with the disadvantage of compound interest.

If a sum equal to the interest be raised by additional taxes, the nation will be burdened at the conclusion of the war, or at any period of its continuance, with a capital debt equal to the amount of the loans, and with additional perpetual taxes equal to the amount of the simple interest of the same.

Suppose the war to continue ten years, and the loans to be raised in the 5 per cents. at par. The whole sum borrowed will be 110 millions,

and the interest of each loan being L.550,000, the whole additional interest will be L.5,500,000.

The surplus of the revenue, now burthened with this additional sum, above a peace establishment, is the only fund from which this debt can be discharged during a subsequent peace.

If a sum greater than the interest of the loan be raised by additional taxes, there will be less accumulation of capital; and the further taxation is carried, the more accumulation is restricted: but, until taxation is carried so far as to defray the expenses within the year, there will be a certain accumulation; and till it be carried so far as to confine the accumulation within the limit that may be reasonably expected to be discharged in a subsequent peace, the system will prove ultimately ruinous.

The restraint given to the accumulation of debt in any period, short or long, depends altogether upon the excess of the additional taxes above the interest of the loans; and it makes no difference whether they be considered simply as war taxes, or permanent taxes, according to future exigencies; or whether they be connected with a sinking fund of any kind.

Suppose that additional taxes amounting to L.610,000 are imposed every year; as this does more than cover the interest of the loan, and part of it may be applied to the expense of the war, a less loan than L.11,000,000 will be sufficient, and  
the

the loan will be less in each succeeding year, so long as L.11,000,000 is the sum wanted.

The progress of the funded debt will be as follows,

The first year L.550,000\* from the additional taxes being applied in payment of the interest of the loan, there will be a surplus of L.60,000 applicable to the service of the second year.

The loan required the second year will therefore be L.10,940,000, and the amount of the loans, in the two first years, L.21,940,000, the interest of which is L.1,097,000, and as L.610,000 more of additional taxes are imposed the second year, or L.1,220,000 in these two years, there will be a surplus, after paying the interest, of L.123,000 applicable to the service of the third year, and the loan required for that year will be L.10,877,000.

The amount of loans during these three years is therefore L.32,817,000, the interest thereof, L.1,640,850, the additional taxes imposed during these three years, L.1,830,000, affording a surplus of L.189,150, applicable to the service of the fourth year.

\* All the calculations in this inquiry, unless when otherwise mentioned, are made at 5 per cent. interest; the 3 per cent. funds are valued at 60, the 4 per cents. at 80, and the 5 per cents. at par.

The

The progress during ten years is exhibited in the following Table.

Years.	Loan each year.	Amount of loans.	Amount interest.	Amount add. taxes.	Surplus.
1st	11,000,000	11,000,000	550,000	610,000	60,000
2d	10,940,000	21,940,000	1,097,000	1,220,000	123,000
3d	10,877,000	32,817,000	1,640,850	1,830,000	189,150
4th	10,810,150	43,627,850	2,181,393	2,440,000	258,607
5th	10,741,393	54,369,243	2,718,462	3,050,000	331,538
6th	10,668,462	65,037,705	3,251,885	3,660,000	408,115
7th	10,591,885	75,629,590	3,781,480	4,270,000	488,520
8th	10,511,480	86,141,070	4,307,043	4,880,000	572,947
9th	10,427,053	96,568,123	4,828,406	5,490,000	661,594
10th	10,338,406	106,906,529	5,345,326	6,100,000	754,674

Thus, at the end of ten years, when additional taxes are imposed annually to the extent of L.610,000, the amount of funded debt is L.106,906,529, instead of L.110,000,000, which it would have been, if the additional annual taxes had been only L.550,000.

If, instead of conducting the business in this manner, we trace the effects of the system, actually followed, of transferring L.1,200,000 annually from the public revenue to Commissioners appointed for the reduction of the national debt, by whom also the interest of the sums redeemed are applied each succeeding year, in addition to the above mentioned sum, for its further redemption, the result will be found exactly the same.

As L.11,000,000 is annually wanted to complete the war expenses, and L.1,200,000 to be transferred to the Commissioners, the annual loan must

must be L.12,200,000 and the amount of the loans in ten years, L.122,000,000.

The first year, L.1,200,000 of the debt is redeemed, leaving L.11,000,000 unredeemed.

The second year, L.60,000, the interest of this redeemed debt being added to the L.1,200,000, the sum applied by the Commissioners for the redemption of the public debt is L.1,260,000, and this redeeming an equal sum in the 5 per cents. the whole sum redeemed the two first years is L.2,460,000, and the loans of these years being L.24,400,000, the unredeemed debt at the end of the second year is L.21,940,000.

The interest of the redeemed debt now amounts to L.123,000, which being added to L.1,200,000 gives L.1,323,000, applicable to the redemption of debt. The whole sum borrowed the first three years is L.36,600,000; the whole sum redeemed, L.3,783,000; and the unredeemed debt L.32,817,000.

The progress during ten years is as follows :

Years.	Loan each year.	Amount of Loans.	Debt re-deemed each year.	Amount of debt re-deemed.	Interest on debt red.	Debt remaining unredeemed.
1st	12,200,000	12,200,000	1,200,000	1,200,000	60,000	11,000,000
2d	12,200,000	24,400,000	1,260,000	2,460,000	123,000	21,940,000
3d	12,200,000	36,600,000	1,323,000	3,783,000	189,150	32,817,000
4th	12,200,000	48,800,000	1,389,150	5,172,150	258,607	43,627,850
5th	12,200,000	61,000,000	1,458,607	6,630,757	331,538	54,369,243
6th	12,200,000	73,200,000	1,531,538	8,162,295	408,115	65,037,705
7th	12,200,000	85,400,000	1,608,115	9,770,410	488,520	75,629,590
8th	12,200,000	97,600,000	1,688,520	11,458,930	572,947	86,141,070
9th	12,200,000	109,800,000	1,772,947	13,231,877	661,594	96,568,123
10th	12,200,000	122,000,000	1,861,594	15,093,471	754,674	106,906,529

Thus it appears that the amount of unredeemed debt at the end of ten years, when the system of the sinking fund is strictly followed, is L.106,906,529, the same as the amount of the debt under equal expenditure and taxation when no sinking fund is established. It is the same every year of that period, and will remain the same for any length of time. The surplus of taxes applicable to the expense of the war on the one system answers to the interest of debt redeemed, applicable to its further redemption, on the other.

If, instead of funding in the 5 per cents. at par, the transactions be made in the 3 per cents. at L.166 13s. 4d. capital, for L.100 borrowed (and this is nearly what has been done), the nominal sums funded and redeemed are increased in the proportion of 5 to 3, but no alteration is made in the interest, or the real value of the debt.

If the L.11,000,000 required yearly be funded in the 3 per cents. the capital funded is L.18,333,333, and if a sinking fund of 1 per cent. on this nominal sum be established for its redemption, the sum required to be raised by additional taxes yearly for that purpose is L.183,333. This will have a greater effect in preventing accumulation or increasing the sum redeemed than a surplus of L.60,000 in proportion to the sums: But the reasoning adduced in regard

regard to the one is equally applicable to the other.

We have now examined the supposed effects of sinking funds, in the cases of diminishing debt during peace, and of increasing debt during war, with a degree of prolixity which so clear a subject little required, had not the efficacy of a sinking fund, and omnipotence of compound interest been strongly urged by respectable authority, and taken possession of the public mind, and influenced the public measures of finance for a course of years. We trust we have demonstrated their futility. No person ever doubted that increase of taxation, and saving of expenditure, are means of retarding the accumulation of debt. We ought to embrace the former as far as we are able, and the latter, as far as safety permits. But the point at issue is, whether, taxation and expenditure being the same, a sinking fund produces any beneficial effect.

If a period of peace were protracted till the public debt were discharged, the taxes might and would be diminished to the limit of a peace expenditure, for nobody now thinks of accumulating national treasure for future purposes. If the periods of war and peace be so related, that the debt contracted in the former be discharged in the latter, the amount of the debt vibrates, and this system may go on for an unlimited  
 I length

length of time. But, if more debt be contracted every war, than is discharged in the subsequent peace, (and this has hitherto been the real case) and if the accumulation be in a greater proportion than the increase of national wealth, there is a limit beyond which the system cannot be supported.

## PART II.

### HISTORY OF THE PUBLIC DEBT OF GREAT BRITAIN.

---

#### CHAPTER I.

#### *Progress of the Funded Debt.*

---

#### SECTION I.

#### PERIOD BEFORE THE FRENCH REVOLUTION.

THE funded system commenced at the Revolution. The public debt before that time was inconsiderable, and not reduced to any regular form. During the war waged by King William against the abdicated monarch, and the king of France, who supported his claims, it was found impracticable to raise the requisite sums within the year, and recourse was had to loans ; for discharging which taxes were imposed, to continue for a limited number of years ; it being expected that the produce of these taxes would discharge  
I 2 the

the debts in the periods for which they were granted. These expectations were seldom realized, and as the public exigencies required the taxes to be mortgaged again, for new loans, often before their former term was expired, they were prolonged from time to time, and at last, almost in every instance, rendered perpetual. Loans were also raised during that war on annuities for lives, on very high terms.

The legal rate of interest at the commencement of the funding system was 6 per cent., and it was reduced in the year 1714 to 5 per cent.\* The rate of interest granted for the public debt has been often higher than the legal rate: But instead of assigning capital to the public creditor equal to the sum borrowed, and a rate of interest which it could be procured for, according to the circumstances of the times, the practice in the later period of that system has been to fix upon a low rate of interest, and grant the lender other advantages, generally by assigning to him a capital larger than the sum borrowed. The greater part of the loans has been made in funds bearing 3 per cent. interest on the nominal capital, some in a fund at 4 per cent. and some in one at 5 per cent.

Some loans have been contracted altogether on annuities for lives or years: But most of these annuities, which at present amount to a large

\* See Note V.

large sum, have been granted as a collateral advantage to the public creditor, who received the greater part of his recompence in a capital bearing interest at three, four, or five per cent.

Annuities for lives have sometimes been granted upon schemes called *Tontines*, in which the benefit of survivorship is allowed. The subscribers to these schemes appoint nominees, who are divided into classes, according to their ages, and a proportionate annuity is assigned to each; and when some of the lives fail, the amount of the annuities appertaining to each class is divided among the survivors, so long as any remain, or at least till the annuity amount to a large sum, according to the terms of the scheme.

Tontines seem adapted to the passions of human nature, from the hope every man entertains of longevity, and the desire of ease and affluence in old age; and they are beneficial to the public, as affording a discharge of the debt, although a distant one, without any payment. They have been extensively adopted in some foreign countries, but seldom in Britain. The first, which was proposed in the beginning of king William's reign, only succeeded to a small extent; the second, attempted in the year 1766, almost totally failed; and, in the third and last, undertaken in 1789, although the sum proposed to be raised in this way was only L.1,002,500, the  
persons

persons who contracted with Government for the whole were unable to compleat it without loss ; and an alternative was afterwards allowed them of a long annuity.\* Some schemes of this kind, undertaken in Ireland in the years 1773, 1775, and 1776, were more successful.

The annuities for fixed terms now existing (called Long Annuities) all terminate at the same time, in 1860. The first of these was granted in the year 1761, being an annuity of L.1 for 99 years, upon every L.100 subscribed to the loan of L.11,400,000 contracted that year, in addition to the permanent annuity of L.3 on a capital equal to the sum advanced. Many other annuities of this kind have been since granted, and all of them for such periods as to terminate at the same time. The amount of these annuities for Britain, on the 1st February, 1817, was L.1,225,431, and, except what was granted in place of the tontine of 1789, they are all in addition to the perpetual annuities on the capitals of the loans.

The part of the public debt to which a perpetual annuity is annexed is called the *redeemable debt*, because it may be redeemed by Parliament, on repayment of the capital. The part invested in annuities for lives or years is called the *irredeemable debt*, as these cannot be redeemed during

\* See Note VI.

ing the term agreed on, without the consent of the holder.

Another colateral advantage has sometimes been granted to the public creditors from lotteries. Tickets have been granted to the subscribers to the loans, on terms considered as beneficial, and instead of paying money to the holders of the fortunate tickets, the prizes were assigned them in capital stock of that kind in which the loan of the year was funded. This method was introduced in king William's reign, and continued in many of the loans of the three following reigns. During the peace which followed the seven years war, the lotteries were several times connected with the schemes adopted for discharging a part of the public debt. In the lottery of 1769, the prizes were paid in money ; in 1776, the system of funding the prizes was revived. The lotteries, from 1777 to 1784 inclusive, were connected with the loans, but the prizes paid in money. In 1785, the tickets were sold at a profit to the public, and the prizes paid in money ; and this method has been adhered to in all the lotteries since.

The profit which the public draws from lotteries has been considered as a tax on the spirit of gaming, and in this view may be added to the amount of the other taxes. In order to secure all that can be raised this way to the public, private lotteries are prohibited under heavy penalties.

But

## REIGN OF WILLIAM III.

---

THE only debt subsisting before the Revolution, which is now blended with the mass of our national incumbrances, took rise from the measure of shutting the Exchequer in the year 1672. On that occasion, L.1,328,526, which had been advanced on the credit of supplies voted by the House of Commons, was retained. Interest was paid to the creditors for some years, at 6 per cent., but was discontinued before the death of Charles II. ; and no provision was made by Parliament for this debt till the last year of king William's reign, when the hereditary excise was charged with the interest of the above mentioned sum, at 3 per cent. redeemable upon payment of L.664,263, or half the principal. This has been called the Bankers' debt, and was incorporated with other public debts in the general fund established in 1716.

There was also due for arrears to the army and other demands at the Revolution, about L.580,000, and L.60,000 to the late king's servants ; but the money in the Exchequer and in the hands of the receivers was sufficient to discharge these demands.

More difficulty was found in raising the comparatively moderate sums required in king William's reign, than in obtaining much larger loans in later times. This may be partly attributed to the inferiority of the national wealth, and greater value of money ; and partly to the novelty of the system, and want of public confidence. Measures of various kinds were had recourse to.

I. The

I. The most general measure was that already mentioned, of imposing taxes for a limited, generally a small, number of years, and mortgaging their produce to the lenders for payment of their principal and interest. Upon this system the following loans were authorized by Parliament,\* though some of them were not completed.

1690.—Loan, charged on certain excise duties, for four years, interest 8 per cent. for what was advanced before 10th June, and 7 per cent. afterwards,	L.250,000
Loan, charged on duties of tonnage and poundage, for four years, interest as above,	500,000
1691.—Loan, charged on duties on East India goods, &c. for 5 years, interest 8 per cent.	300,550
Loan, charged on duties on wines, &c. continued from 1698 to 1696, interest 8 per cent.	700,100
Loan, charged on additional excise duties, for 4 years, interest 7 per cent. payable quarterly,	1,000,000
1693.—Loan, charged on additional duties on importation, for years, at 8 per cent.	510,000
Loan, charged on duties on wines, &c. continued from 1696 to 1698, at 8 per cent.	500,000
1694.—Loan, charged on stamp duties, new first introduced, for 4 years, at 8 per cent.	330,000
1695.—Loan, charged on tonnage and poundage duties, for 4 years, at 8 per cent.	1,250,000
Loan, charged on duties on batchelors, widows, marriages, births, and burials, for 5 years, at 8 per cent.	650,000
Loan,	

\* We have not included the sums borrowed in anticipation of the land tax, or other taxes, which were repaid, or intended to be repaid, within the year.

Loan, charged on glasswares, for	years,	
at 7 per cent.		L.564,700
1696.—Loans, charged on continued duties on		
wines, &c. for 3 years, at various rates		
of interest,		1,500,000
Loan, charged on house and window duties,		
for 7 years—the first, L.600,000, at 7 per		
cent., and the remainder at 8 per cent.*		1,200,000
Loan, charged on duties on low wines, &c.		
for years, at 7 and 8 per cent.		515,000

At the peace of Ryswick, in 1697, it appeared that many of the funds on which the loans had been granted, would prove defective, and the Exchequer tallies in the hands of the public creditors sold at great discount. The amount of these, including advances on a scheme of a land Bank, which did not take effect, was L.5,160,495 ; to provide for which the Bank of England was authorized to receive them on subscription, and enlarge their capital ; and funds were provided, by the prolongation of various duties to 1706, which were expected to yield L.800,000 per annum, to discharge these debts, with interest, at 8 per cent. within that period. This has been called the *first general mortgage*, several similar measures having been adopted afterwards.

The system of borrowing on duties for short terms was continued after the peace, to discharge arrears, or answer other exigencies, as follows :

1697.—Loan, charged on additional duties on malt,		
&c. for two years, by lottery, (which		
proved deficient,)		L.1,400,000
1698.—Loan, charged on additional duty on coals,		
for 5 years, at 7 and 8 per cent.		500,000
1701.—Loan, charged on continuation of various		
duties, for years, at 6 and 7 per cent.		300,000
Loan,		

\* See Note VII.

Loan, charged on weekly payments of	
L.3,700 from the excise, for 5 years, at	
6 and 7 per cent.	L.820,000

II. During this reign, the Bank of England, and a new East India Company, were incorporated, and advanced the following sums to the public.

1694.—Loan from the Bank of England, at 8 per	
cent. besides L.4000 for management,	L.1,200,000
1698.—Loan from the East India Company, at 8	
per cent.	2,000,000

III. Besides the above mentioned debts, which can only be discharged by the repayment of the principal, others were contracted this reign on annuities for lives, or terms of years; which therefore became extinct by the failure of the lives, or the lapse of time.

The first operation of this kind was in the year 1692, when it was proposed to raise a million, for which the contributors were to receive 10 per cent. for seven years, and afterwards 7 per cent. on the lives of their nominees, with the benefit of survivorship, till the number was reduced to seven. Advantageous as these terms were, the sum raised on it was only L.108,100, and the annuity after seven years, L.7,567.

An alternative was allowed of an annuity on a single life, at 14 per cent. ; the sum raised on which was L.773,393, amounting, with the former, to L.881,493 ; and by an act of the following year, the million was completed on the same terms. The payment of these annuities was charged on an additional duty on ale, &c. for 99 years, which was afterwards rendered perpetual.

In the year 1694, annuities were granted for one, two, or three lives, in the option of the purchasers, on which the following sums were raised.

On

IV. The measure of raising money by issuing Exchequer bills was introduced in this reign, in the year 1696; and has been annually continued, and much extended since.

---

## REIGN OF QUEEN ANNE.

---

I. THE measure of raising money by loans on particular branches of the revenue mortgaged for a limited number of years was continued in the early part of this reign. The whole sum raised by eight loans of this kind, almost all at 6 per cent. interest, payable quarterly, was L.4,713,405, exclusive of the loan of L.1,296,552, raised in 1710, charged at first on the continuation of the impost on wines, tobacco, &c. from 1716 to 1720; but transferred next year to the South Sea Company.— On these loans no additional capital was granted.

II. L.1,200,000<sup>l</sup> was advanced in 1708 by the East India Company, without interest, and L.400,000 by the Bank of England, in 1709, without interest after the two first years, on the prolongation of their respective charters.

III. The South Sea Company was established in 1711. At this time great arrears had been incurred upon the navy, victualling, transport, and ordnance departments, and other branches of the war expenditure; to liquidate which the holders of these debts, and also of the loan of 1710, were incorporated and

and invested with the exclusive privilege of trading to the South and West coast of America ; and they advanced L.500,000 to Government for current services.

The amount of arrears and deficiencies above mentioned, with interest, was reckoned at	-	-	L.7,213,572

--	--	--	-------------

However, on making up their accompts, it was found only to amount to	-	-	9,177,967
--	---	---	-----------

On this, their original capital, they received 6 per cent. interest, and L.8000 per annum for management.

IV. Large sums were raised on annuities for 99 years, at different rates ; money was also raised in 1705, on annuities for one, two, or three lives, which were afterwards converted, upon advancing additional sums, into long annuities. The amount raised in this manner was L.8,191,942, and the amount of the annuities was L.527,174.

The payment of these annuities was charged on certain branches of the revenue ; and as these were already mortgaged for a certain term at the time when the money was wanted, a farther sum was raised, in addition to that applied to the public service, for payment of the annuity, till the branch of revenue in which it was charged should become free. Thus, in 1704, the sum raised by annuities was L.1,018,867, charged on weekly payments from the excise ; but L.900,000 only of this was applied to the public service, and L.118,867 was reserved for payment of the annuities until the 25th December, 1705, when

when that fund should be disengaged. A like arrangement, obviously very disadvantageous to the public, was made in several following financial operations.

V. In the year 1710, the sum of L.2,400,000 was raised by two acts, on annuities for 32 years, at 9 per cent.

VI. In the latter part of this reign, when, from the continuance of the war, the difficulty of obtaining money became greater, recourse was had to a method which increased the capital of the public debt to a much greater extent than the money raised. The loans were raised by lotteries, in which every ticket was intitled to a capital equal to the sum advanced; and the fortunate tickets or prizes to a large additional capital—both bearing interest at 6 per cent., and proposed to be repaid, with interest, in 32 years, funds being allocated for that purpose, which were reckoned sufficient for their discharge in that time. The sums raised in this manner, by six lotteries, including one which was appropriated to discharge the debt on the civil list, and one which was granted after the peace of Utrecht, to discharge arrears, amounted to

---

L.37,807,224

The amount of debt contracted during this or the former reign is not exhibited by adding the loans. For, as some of them were contracted on the mortgage of certain branches of the revenue for short terms, and were discharged, or, at least, much reduced, within these periods, the existing debt at any time consisted

sisted of the undischarged balances, added to the amount of the debts of a more permanent kind. The same system of paying former debts and contracting new ones then prevailed, which, under a different form, has been so extensively followed in later times.

---

## REIGN OF GEORGE I.

---

THIS reign was a period of uninterrupted peace. Notwithstanding this, the capital of the public debt was very little diminished; but important alterations took place in our financial system, and the interest of the debt was much reduced. The most important measures were the following :

I. Instead of mortgaging certain branches of the revenue for a limited time, the loan of 1715 was raised on perpetual annuities, redeemable by Parliament, on repayment of the principal, but funds assigned for payment of the interest only. This method has been generally followed since. But several loans were raised this and the following reign, on the former system, by the renewal, and several prolongations of the salt duties.

II. A separate account had been hitherto kept of each loan, and of the funds on which it was charged. This method was found inconvenient, as the produce of some of the taxes fell short of the expected amount, while that of others exceeded it, and the multiplicity of funds occasioned confusion. For these reasons,

reasons, the various branches of the revenue, soon after the peace of Utrecht, were united into a few funds. The *aggregate fund* was established in 1714, and the *general fund* in 1716. The *South Sea fund*, which had been established some years before, underwent some new regulations. To each of these funds a variety of duties was appropriated, comprehending altogether the whole revenue, except the land and malt tax granted annually, and the branches then appropriated to the support of the civil government;\* and each of them was charged with the payment of certain annuities. The management of the debt and receipt of future loans was transferred from the Exchequer to the Bank, and that convenient mode of transference established, which is still in use.

III. The united surplus of these three funds formed the basis of the first sinking fund, established in 1716, and proposed to be inviolably applied to the discharge of the national debt. A particular account of this fund will be given in the following chapter.

IV. The more beneficial measures embraced this reign were those for the reduction of the interest on the national debt. We have mentioned that most of the loans in king William's reign were made at 8 per cent. interest, and those in queen Anne's reign at 6 per cent. In 1714, the legal rate of interest was reduced to 5 per cent. ; but upwards of two years passed before Government took advantage of this reduction. To accomplish this with more facility, Government treated with the Bank and the South Sea Company, who not only agreed to abate the interest on the debts due them, (except that on the original stock of the Bank) from 6 to 5 per cent. ; but to advance, the former L.2,500,000, and the latter L.2,000,000, for the payment of such creditors as should refuse to accede to a like agreement: but no demand from these companies was necessary,

\* See Note IX.

sary, as almost all the public creditors agreed to the proposed reduction. This took place in 1717.

Although there has been no farther reduction of the legal rate of interest, yet, the actual rate having fallen, Government was enabled to obtain a reduction of the interest on the debts due to the Bank and South Sea Company, from 5 to 4 per cent. in 1727. The interest on the debt due to the East India Company underwent a like reduction in 1732. At this time, almost all the redeemable debt was due to these three companies.

V. The transactions with the South Sea Company during this reign were extensive and important. We have already noticed, that the original capital of this company, at its establishment in the former reign, was L.9,177,967. In 1715, this capital was increased to L.10,000,000, chiefly by adding arrears of interest unpaid to their former capital. In 1719, part of the annuities granted in 1710, for thirty-two years, at 9 per cent., or  $11\frac{1}{9}$  years purchase, were subscribed into the company's stock, notwithstanding the part of the term elapsed at  $11\frac{1}{2}$  years purchase, and the company advanced L.544,142 to Government; by which operations, their capital was raised to L.11,746,844.

In 1720, a scheme was formed for uniting all the public debts into one fund; and for that purpose, this company was authorised to purchase the debts and annuities due by Government, on the most advantageous terms they could. The amount of these debts and annuities (besides those due to the Bank and East India Company, not comprehended in the scheme) was—

Redeemable debts, bearing interest at 5 per	
cent.	L.11,779,660
Ditto, bearing interest at 4 per cent.	4,776,822
	<hr/>
	L.16,556,482
	Long

Long annuities, granted for 99 years,	-	L.666,821
Short annuities, granted for 32 years, not formerly subscribed,	-	127,260
		<hr/> L.794,081

And they were to have an addition to their capital of twenty years purchase for the long annuities, and fourteen years purchase for the short annuities, at 5 per cent. interest, and an equal stock for the perpetual annuities, at the respective rates of interest which they bore; but the interest of the 5 per cents. to be reduced to 4 per cent. in 1727. The company farther agreed to pay into the Exchequer, for the liberty of purchasing the perpetual annuities, L.4,156,306 towards the discharge of the national debt; and to pay L.450 for every L.100 of terminable annuities which they should purchase.

This gave rise to an extraordinary scene of national infatuation, generally called the *South Sea Bubble*. The expectations entertained of advantage from this agreement with Government, and from the extension of their trade to the South Sea, were so extravagant, that the price of their stock rose in a short time to 1000 per cent., and soon after fell as rapidly, to the ruin of many. The folly of this national credulity was the more surprising, as a similar delusion of the Mississippi Company had taken place in France about a year before, attended with consequences still more fatal.

The greater part, however, of the public debt was subscribed into the South Sea Company, and their capital was raised to L.37,802,488; of which, four millions were purchased by the Bank in 1722. Upon the disasters which befell this company, they were exempted from the stipulated payments to Government.

These operations, so far as they related to the redeemable debt, were merely a change of arrangement, and made no alteration either in the capital or interest of the public debt. To understand

understand the alteration produced upon the irredeemable debt, we must observe that the long annuities, in consequence of the reduction of interest, now sold at a higher price than the sum originally advanced, notwithstanding the part of the term elapsed. These annuities had been granted at different rates, as already mentioned, most of them about 16 years purchase. The company, by purchasing L.100 annuity, for which L.1600 had been originally paid, became entitled to a capital of L.2000. Thus, the public, instead of an annuity which terminated by the course of time without repayment, became burthened at present with an equal one, which could only be extinguished by the payment of a sum greater by one-fourth than what had been advanced. But, in return for this, the debt was rendered redeemable, and a reduction of interest to 4 per cent. in 1727, agreed on; and, in consequence of the option of redemption, Government was enabled afterwards to reduce the interest to 3 per cent. along with that of the other public debts.

These measures have been much commended; but their advantage to the public seems equivocal. An interest or perpetual annuity, susceptible of reductions, and actually reduced, was substituted for a temporary annuity, which admitted of no reduction: But the sure and complete relief which the course of time would have given many years ago, without repayment, was abandoned; and the public was burthened with a permanent debt, exceeding the sum originally advanced by L.3,034,769.

Although the amount of the public debt was nearly stationary this reign, considerable loans were made for discharging the unfunded debt, and for compensating the sums paid by the sinking fund, or otherwise. These were nearly as follows:

	<i>Principal.</i>	<i>Interest.</i>
1715.—Loan, at 5 per cent. transfer- able at the Bank, -	L.910,000	L.45,500
Additional loan, at the same rate,	169,000	8,450
1717.—Loan, on the general fund, for supplying sundry deficien- cies, at 5 per cent. -	952,042	47,602
And for discharging Canada bills, at 4 per cent. -	24,195	968
1719.—Loan, by lottery, at 4 per cent. including expense of draw- ing, -	505,995	20,240
By another lottery, at 4 per cent.	500,000	20,000
Loan, at 5 per cent, -	520,000	26,000
1720.—Loan, charged on plate duty, at 4 per cent. -	312,000	12,486
1726.—Loan, by lottery, for the civil list, charged on pension duty, at 3 per cent. -	1,000,000	30,000
1727.—Loan, charged on duty on coals, at 4 per cent. -	370,000	14,800

All the redeemable annuities not subscribed into the South Sea Company, were paid off from the sinking fund during this reign. The irredeemable subsisting annuities were nearly as follows:

	<i>Principal.</i>	<i>Annuity.</i>
Long annuities, not subscribed into the South Sea Company, -	L.1,836,275	L.131,203
Short annuities, which expired in 1742, not subscribed, -	270,398	24,322
Tontine of 1692, -	108,100	7,567
	<hr/> L.2,214,773	<hr/> L.163,092
Annuities for two or three lives, granted in 1694, original sum,	122,152	22,637

The two first of these articles remained permanent for many years, but the last article was diminished gradually by the failure of lives.

The whole debt, funded and unfunded, at the end of this reign, has been estimated at L.52,092,285, and the interest, L.1,217,551.

## REIGN OF GEORGE II.

DURING the first and pacific part of the reign of George II. financial business was conducted nearly in the same manner as in the former reign. The system of contracting new debts, and applying the sinking fund to the discharge of former debts, was for some time continued, but the debt was, on the whole, diminished. The loans were nearly as follows:

	<i>Principal.</i>	<i>Interest.</i>
1728.—Loan, from Bank, at 4 per cent. -	L.1,750,000	L.70,000
1728.—Loan, from Bank, at 4 per cent. -	1,250,000	50,000
	<hr/>	<hr/>
	L.3,000,000	L.120,000
m 2		1751.—

	<i>Principal.</i>	<i>Interest.</i>
Brought over, -	L.3,000,000	L.120,000
1731.—Loan, at $3\frac{1}{2}$ per cent. -	400,000	14,000
and by lottery, at 3 per cent. -	800,000	24,000
1732.—Loan, charged on salt duties, revived for three years from Lady-day, 1732,* at 3 per cent. - -	500,000	15,000
	<hr/>	<hr/>
	L.4,700,000	L.173,000
1734.—Loan, charged on salt duties, continued for 7 years from 1735, at 4 per cent. -	1,000,000	40,000
1735.—Loan, charged on salt duties, continued for 5 years from 1742, at 4 per cent. -	500,000	20,000
1736.—Loan, charged on the sinking fund, at 3 per cent. -	600,000	18,000
1737.—Loan, at 3 per cent. -	500,000	15,000
1738.—Loan, charged on the sinking fund, at 3 per cent. -	300,000	9,000
	<hr/>	<hr/>
	L.7,600,000	L.275,000

We have not mentioned several loans charged on the growing produce of the sinking fund, from which they were repaid soon after.

Although hostilities against Spain commenced in 1739, and war was openly waged with France and Spain in 1740, there do not seem to have been any loans for that war, except what were charged on the growing produce of the sinking fund till 1741.

The

\* When the loan was raised on the mortgage of duties for a limited time, we have mentioned the duties on which it was charged, but not when the interest only was provided for.

The terms of the loans, and amount of money borrowed, capital funded, and interest and annuities contracted, during the war of 1740, were nearly as follows.

	<i>Sum borrowed.</i>	<i>Capital.</i>	<i>Interest.</i>	<i>Annuity.</i>
1741. Loan, at 4 per cent. charged on prolongation of salt duties, from 1746 to 1753, -	1,200,000	1,200,000	48,000	
1742. Advanced by the Bank, with- out interest, in consideration of the renewal of their charter, Loan, at 3 per cent. charged on sinking fund, -	1,600,000 800,000	1,600,000 800,000	24,000	
1743. Loan, at 3 per cent. - and by lottery, at the same rate, 1744.	1,000,000 800,000	1,000,000 800,000	30,000 24,000	
From the East India Com- pany, on the prolongation of their charter, at 3 per cent.	1,000,000	1,000,000	30,000	
Loan, at 3 per cent. but L 3 deducted from each L.100 at payment, - and by lottery, at 3 per cent.	1,164,000 600,000	1,200,000 600,000	36,000 18,000

Loan, at 3 per cent. - and by lottery, each subscriber of L.300 to the loan to have 10 tickets, at L.10, - and a life annuity of L.4 10s.	1,500,000 500,000 -	1,500,000 500,000 -	45,000 15,000 -	22,500
1746. Loan, at 4 per cent. - and by lottery, each subscriber of L.500 to the loan to have 10 tickets, at L.10, - and a life annuity of L.9,	2,500,000 500,000 -	2,500,000 500,000 -	100,000 20,000 -	45,000
Advanced by the Bank, for cancelling Exchequer bills, at 4 per cent.* -	986,800	986,800	39,472	
1747. Loan, at 4 per cent. with an ad- ditional capital of 10 per cent. and by lottery, at 4 per cent.	4,000,000 1,000,000	4,400,000 1,000,000	176,000 40,000	
	20,150,800	20,586,800	680,472	67,500

\* See Note X.

	<i>Sum borrowed.</i>	<i>Capital funded.</i>	<i>Interest.</i>	<i>Annuity.</i>
Brought forward, - 1748.	20,150,800	20,586,800	680,474	67,500
Loan, at 4 per cent, each subscriber of L.100 to have a gratuitous lottery ticket, value L.10	6,300,000	6,930,000	277,200	
1749.	26,450,800	27,516,800	957,672	67,500
Navy bills, &c. charged on sinking fund, at 4 per cent. - 1750.	3,072,472	3,072,472	122,898	
Loan, at 3 per cent. to discharge part of the debt of the navy, charged on the sinking fund,	1,000,000	1,000,000	30,000	
	30,523,272	31,589,272	1,110,570	67,500

It appears from this account, that the loans were raised on easy terms till 1745, when the alarm excited by the rebellion rendered it necessary to grant a life annuity, in addition to the interest of the loan,—and the same was done to a greater extent the following year ; and in the two last years of the war, an additional capital of 10 per cent. was granted. A small additional capital had been granted in 1744.

The most important financial measure in the succeeding peace was the reduction of the interest on the greater part of the public debt to 3 per cent. For this purpose, it was enacted, in 1749, that all the public creditors at 4 per cent. who should signify their consent to accept of 3 per cent. after 25th December, 1757, should have their present interest continued till 25th December, 1750, and 3½ per cent. interest, till December, 1757. The amount of these debts was L.57,703,475. The greater part of the creditors accepted of this offer: but, as some had declined it, a like offer was repeated next year, in which the interest at 3½ per cent. was only continued till 25th December, 1755. Most of the remaining creditors accepted, and those who declined it were paid off. These debts were united into a fund, since called the *three per cent. reduced annuities* ;  
and

and the debts, which then bore only 3 per cent. interest, were united into another fund, called the *three per cent. consolidated annuities*. The interest on the South Sea stock of L.3,662,784 was continued at 4 per cent. till December, 1757; but that on the South Sea annuities underwent the same reduction as the other debts: and L.2,100,000 was borrowed in 1751, transferable at the South Sea House, to pay off those who declined the reduction.

The funded debt discharged during the peace was,	
Navy debt, charged on sinking fund, in 1749,	L.3,072,472
To holders of South Sea annuities, who did not	
agree to the reduction of interest, in 1751,	2,276,843
To other public creditors, for the same reason,	830,989
	<hr/>
	L.6,180,354

The funded debt at the commencement of the seven years war was nearly the same as at the conclusion of the former war; but the greater part of the unfunded debt was paid off during the peace.

The terms of the loans, and amount of money borrowed and capital funded, and interest and annuities contracted, during the seven years war, were as follows.

	Sum borrowed.	Capital.	Interest.	Annuity.
1755. Loan, at 3 per cent. by lottery,	900,000	900,000	27,000	
1756. Loan, at $3\frac{1}{2}$ per cent. redeem- able after 15 years, and redeem- ed in 1771, -	1,500,000	1,500,000	52,500	
Also, by lottery, at 3 per cent.	500,000	500,000	15,000	
1757. Loan, at 3 per cent. with an ad- ditional life annuity of 22s. 6d. per L.100, -	3,000,000	3,000,000	90,000	33,750
1758. Loan, at $3\frac{1}{2}$ per cent. reduced in 1782 to 3 per cent. -	4,500,000	4,500,000	157,500	
and by lottery, at 3 per cent.	500,000	500,000	15,000	
1759. Loan, at 3 per cent. allowing L.115 capital for every L.100 borrowed, -	6,600,000	7,590,000	227,700	
1760. Loan, at 4 per cent. for 21 years, and then reduced to 3 per cent. allowing L.103 ca- pital for L.100 borrowed, -	8,000,000	8,240,000	329,600	
1761. Loan, at 3 per cent. with an ad- ditional annuity of L.1 2s. 6d. for 99 years, -	11,400,000	11,400,000	342,000	128,250
and by lottery, at 3 per cent.	600,000	600,000	18,000	
1762. Loan, at 4 per cent. for 19 years, and then reduced to 3 per cent. with an annuity of L.1 for 98 years, -	12,000,000	12,000,000	480,000	120,000
1763. Loan, at 4 per cent. -	2,800,000	2,800,000	112,000	
and by lottery, at the same rate,	700,000	700,000	28,000	
Transactions after the peace, to discharge arrears.	53,000,000	54,230,000	1,894,300	282,000
1763. Navy bills, charged on the sink- ing fund, at 4 per cent. and paid off in 1765, 1766, and 1767, 1765.	3,483,553	3,483,553	139,342	
Navy bills, funded in the 3 per cent. reduced,	1,482,000	1,482,000	44,460	
	57,965,553	59,195,553	2,078,102	282,000

The loans of 1758, 1761, 1763, 1767, and 1768, were aided by the profits of lotteries.

A considerable sum of navy and other debts, contracted this war, was never funded, but paid off in the subsequent peace.

### REIGN OF GEORGE III.

We have already, for the sake of connection, mentioned the financial operations to the conclusion of the seven years war.

During the succeeding peace, the following loans were contracted, chiefly to discharge other debts which bore a higher rate of interest :

Loan of 1766, at 3 per cent.	-	-	L.1,500,000
Loan of 1767, at 3 per cent.	-	-	1,500,000
Loan of 1768, at 3 per cent.	-	-	1,900,000
			<hr/>
			L.4,900,000

And the following debts were paid off:

		<i>Sum paid.</i>	<i>Capital.</i>
1765 } Navy debt, charged on sinking			
1766 } fund, in 1763, by four equal			
1767 } payments of L.870,888,	L.3,483,553		L.3,483,553
1768 } Loan of 1763, at 4 per cent.			
1769 } discharged by 4 equal pay-			
ments of L.875,000, at par.	3,500,000		3,500,000
		<hr/>	<hr/>
Carried forward,	-	L.6,983,553	L.6,983,553
			1771.—

	<i>Sum paid.</i>	<i>Capital.</i>
Brought forward, -	L.6,983,553	L.6,983,553
1771.—Loan of 1756, at $3\frac{1}{2}$ per cent. at par. - -	1,500,000	1,500,000
1772.—Various 3 per cent. funds, paid off at 90 per cent., each holder of L.100 being al- lowed four lottery tickets, at L.12. 10s. - -	1,350,000	1,500,000
1774.—Various 3 per cent. funds, paid off at 88 per cent., each holder of L.100 being al- lowed six lottery tickets, at L.12 10s. - -	880,000	1,000,000
1775.—Various 3 per cent. funds, on the same terms, -	880,000	1,000,000
	<hr/>	<hr/>
	L.11,593,553	L.11,983,553

In 1773, L.1,253,700, bearing interest at 4 per cent. till 1781, being part of the loans of 1760 and 1762, was subscribed into the 3 per cent. cons., allowing the proprietors the profits of the lottery of that year. The remainder of these loans was added to the 3 per cent. reduced in 1781.

The terms of the loans, and amount of money borrowed, capital funded, and interest and annuities contracted, during the American war, and to discharge arrears, were as follows.\*

	<i>Sums borrowed.</i>	<i>Capital funded.</i>	<i>Interest.</i>	<i>Annuity.</i>
1776. At L.107 10s. funded, for L.100 borrowed, in the 3 per cents. - -	2,000,000	2,150,000	64,500	
1777. At par, in the 4 per cents. with an annuity of 10s. for 10 years, 1778.	5,000,000	5,000,000	200,000	25,000
At par, in the 3 per cents. with an annuity of L.2 10s. for 30 years, or for life, in the option of the subscribers, -	6,000,000	6,000,000	180,000	150,000
1779. At par, in the 3 per cents. with an annuity of L.3 15s. for 29 years, or for life, -	7,000,000	7,000,000	220,000	262,500
1780. At par, in the 4 per cents. with an annuity of L.1 16s. 3d. for 80 years, -	12,000,000	12,000,000	480,000	217,500
	32,000,000	32,150,000		
1781. At L.150 in the 3 per cents. and L.25 in the 4 per cents.	12,000,000	21,000,000	660,000	
1782. At L.100 in the 3 per cents. and L.50 in the 4 per cents. with an annuity of 17s. 6d. for 78 years, - -	13,500,000	20,250,000	675,000	118,125
1783. At L.100 in the 3 per cents. and L.25 in the 4 per cents. with an annuity of 13s. 4d. for 77 years, -	12,000,000	15,000,000	480,000	80,000
1784. At L.160 in the 3 per cents. and L.50 in the 4 per cents. with an annuity of 5s. 6d. for 75½ years, - L.2000 being forfeited by the failure of a subscriber.	6,600,000	8,998,000	299,940	16,500
	75,500,000	97,398,000	3,249,440	869,625

N 2

Which underwent no alteration till the establishment of Mr Pitt's sinking fund, in 1788.

The annuities for terms of years or lives then existing was,

L.1,193,674

SECTION

## SECTION II.

### PERIOD SINCE THE FRENCH REVOLUTION.

SINCE the establishment of the present sinking fund, in 1786, part of the funded has been actually redeemed. In order to exhibit a distinct view of this subject, we shall first state the progress and present amount of the funded debt, and charges on the same, without regard to the redemption; and then the extent of the redemption, and the amount now unredeemed.

At the commencement of the war in 1793, the capital funded debt, stated as in 1786, consisted of

3 per cents.	-	-	L-187,611,255
4 per cents.	-	-	32,750,000
5 per cents.	-	-	17,869,993

Amount funded debt,*	-	-	L-238,231,248
But there had been redeemed by the sinking fund, in 3 per cents.	-	-	10,242,100

Unredeemed debt,	-	-	L-227,989,148
------------------	---	---	---------------

Interest of 3 per cents.	-	-	L-5,628,338
of 4 per cents.	-	-	1,310,000
of 5 per cents.	-	-	893,499

Amount interest,	-	-	L-7,831,837
------------------	---	---	-------------

And

Remainder unredeemed,	"	<u>L.8,934,571</u>

Since the commencement of the war, loans have been contracted every year, and Exchequer and navy bills have been frequently funded. A part of most of the loans since 1797 has been for the use of Ireland, and in 1809 a part was for Portugal. Some loans have been transacted in Britain for

P

Ireland,

\* This is afterwards stated at L.18,847. See Note XIV.

Ireland, which, though not connected with any British loan, are guaranteed by Britain, and the interest payable there. The particulars of these operations are as follows :

1793.

A. Loan, sum raised,	-	-	L.4,500,000
<hr/>			
Capital funded, at the rate of L.100 in 3 per cent. cons. for L.72 raised,	-	-	L.6,250,000
<hr/>			
Interest,	-	-	L.187,500
Management, L.450 per million,	-	-	2,812

1816.

*W.* Loan from Bank of England, at par.

Sum borrowed, -	-	-	L.3,000,000
Capital funded, -	-	-	3,000,000
Interest at 3 per cent. -	-	-	L.90,000

The loan in 1811 marked *I*, and that in 1812 marked *M*, were partly made in Exchequer Bills.

In 1809, an option was given to the holders of the 3 per cent. stock, and of the long annuities, to convert their interest into life annuities, at certain rates, according to the age of the annuitant. In consequence of this, L.3,449,955 of the 3 per cent. stock, and L.4,420 long annuities, was converted into life annuities before 1st February, 1817, amounting, after deduction of what had fallen in by death, to L.225,255. These annuities were charged on the sinking fund, and the dividend, discharged

discharged by the extinction of the capital, amounting to L.107,918, applied to that fund.

An abstract of all these operations, together with the amount of the public debt, and the charge on the same at the commencement of the war, 1793 ; at the peace of Amiens, 1802 ; and on the 1st February, 1817, is exhibited in Table II.

It appears that the amount of the funded debt of Britain at the peace of Amiens, was,

In the 3 per cents.	-	-	L.467,105,854

## IRISH FUNDED DEBT.

---

We have already noticed, that part of most of the loans made in Britain since 1797, has been for the use of Ireland ; and several separate loans have also been made in Britain for Ireland. The interest and other charges on these loans has been annually remitted from the treasury of Ireland to the British treasury.

Table IV. contains a state of the sums raised by these loans, and the capitals funded in the 3 per cents. 4 per cents. and 5 per cents. ; the total capital funded each year ; the amount of the Irish debt payable in Britain at the end of each year : also, the interest, annuities, and charges of management, contracted by each loan.

It appears that the whole sum raised in Britain for Ireland, and guaranteed, to 1st February, 1817, is - L.64,750,000

The capital funded in the 3 per cents,	-	L.94,856,375

S

Besides

Besides this, L.4,500,000, part of the loan raised in Britain in 1811 was for the use of Ireland ; for which there was funded L.5,400,000, in the 3 per cents. ; L.900,000 in the 4 per cents. ; and a long annuity granted of L.15,562 ; but the interest of this being paid by Britain, is not stated in the account of the Irish debt.

But this is only part of the Irish funded debt. Another part has been funded in Ireland, the interest of which is payable, and the capital redeemable there.

The first operations in that kingdom were by *tonnage annuities*. In the years 1773, 1775, and 1777, L.740,000 was raised in that manner, and annuities granted to the extent of L.48,900.

The method generally followed of late is that of granting a funded capital in the  $3\frac{1}{2}$  per cents. equal to the sum borrowed, and an additional funded capital in the 5 per cents. such as the lender would accept of. Sometimes a *Discount* in Irish treasury bills has been also granted.

The progress of the whole Irish funded debt is exhibited in Table V.

The sums raised for Ireland from 1773, when the public debt of that country commenced, to 5th January 1817, were,

By the articles of Union between Britain and Ireland, which took effect 1st January 1801, the debts of each country, existing at that time, and their interest, were to continue as separate charges on the revenues of the respective countries; and such future expenses as were for the special service of either country, were to be charged on the revenue of the same: But the general charges for the army, navy, &c. being alike for the defence or advantage of each country, were appointed to be charged in the proportion of 15-17ths to Britain, and 2-17ths to Ireland.

But these arrangements are now done away. By an act passed in 1816, all the public revenues of Great Britain and Ireland are consolidated and applied to the service of the United Kingdom; and from the 5th January, 1817, the whole of the national debts of both kingdoms, and the interest and sinking funds, compose one consolidated national debt, interest and sinking fund.

When the Union between England and Scotland was accomplished in 1707, as Scotland was subjected, by the articles, to the payment of certain duties of customs and excise, then payable in England, and applicable to the debt of England contracted before the Union, it was agreed that the sum of L.398,085 should be granted by the Parliament of England as an equivalent for the same; and this sum was applied to the payment of the small public debt then due by Scotland, the indemnification of the losses sustained by the Darien Company, the improvement of fisheries and manufactures in Scotland, and some other public purposes.

The public debt of Scotland amounted at the Union to L.248,550; and the creditors were incorporated in 1724, under the name of the *Equivalent Company*, with a stock to that extent, and an annual payment of L.10,000 till redeemed.—L.111,348 of this sum was subscribed in 1727 into the Royal Bank of Scotland, and forms the original stock of that Company, and the remainder forms the present stock of the *Equivalent Company*.

---

#### IMPERIAL LOANS.

Two loans have been raised in Britain for the Emperor of Germany, and guaranteed by the British government. The interest, if not provided by the Emperor, (and he has never made any provision) to be paid from the consolidated fund. The money for these loans was advanced by the subscribers to the  
British

British loans, in proportion to their subscriptions. The particulars are,

Loan of 1795, contracted at a capital of L.83 6s. 8d. in a fund at 3 per cents. for each L.100 advanced, and an annuity of L.5 for 25 years.

Loan of 1797, at a capital of L.226 10s. in a 3 per cent. fund, for each L.100 advanced.

### LOAN TO PORTUGAL.

A LOAN of L.600,000 for the service of Portugal, was raised and guaranteed by Britain in 1809, and connected with the loan of that year, in the manner explained in Note XIX.

The sum funded in the 3 per cent. reduced, was, L.895,522

Interest,	-	-	L.26,865
Management,	-	-	159

Annual charge, (besides sinking fund of L.30,000,) L.27,044

### MANAGEMENT OF THE NATIONAL DEBT.

THE management of the national debt is conducted by the Bank of England, except a small part which is in the hands of the South Sea Company. The expense of management, in most articles, previous to 1786, was at the rate of L.562 10s. per million

lion of capital, whether of a three, four, or five per cent. annuity, reckoning L.40,000 of terminable annuities, equal to a million of capital.

In 1786, the rate of management was reduced to L.450 per million; and this was confirmed by an act of parliament in 1791.

In 1808, the rate of management was further reduced, and settled on the following terms :

L.450 per million, if the capital exceeded 300 millions, but fell below 400 millions.

L.340 per million, if the capital exceeded 400 millions, but fell below 600 millions.

L.300 per million, on such part of the public debt as exceeded 600 millions.

No agreement was made for the case of the public debt falling below 300 millions.

Besides these allowances for management, the bank receives considerable sums for conducting loans and lotteries. The sum at present allowed for receiving contributions to the loans, is L.800 per million, and for transacting the business of the lotteries, at the rate of L.1000 for each contract of 20,000 tickets.

## CHAPTER II.

### *Plans adopted for the Reduction of the Funded Debt, and their Operation.*

---

#### SECTION I.

##### SIR ROBERT WALPOLE'S SINKING FUND.\*

---

THE first plan for the discharge of the national debt, formed on a regular system, and conducted for some time with a considerable degree of firmness, was that of the Sinking Fund established in 1716. The author of this plan was the Earl of Stanhope; but as it was adopted under the administration of Sir Robert Walpole, it is commonly denominated from him. The taxes which had been laid on before for limited periods, being rendered perpetual, and distributed among the *South Sea*, *Aggregate*, and *General Funds*, as has been mentioned already, and the produce of these funds being greater than the charges upon them, the surplusses, together with such farther surplusses

\* This account of Sir Robert Walpole's sinking fund, is chiefly taken from Dr. Price's writings.

surplusses as might afterwards accrue, were united under the name of the *Sinking Fund*, being appropriated for the discharge of the national debt, and expressly ordained to be applicable to no other purpose whatever. The legal interest had been reduced from six to five per cent. about two years before, and as that reduction was conformable to the commercial state of the country, Government was now able to obtain the same reduction on the interest of the public debt, and apply the savings in aid of the sinking fund. In 1727, a further reduction of the interest of the public debt, from five to four per cent. was obtained, by which nearly L.400,000 was added to the sinking fund. And in the year 1749, the interest of part of the debt was again reduced to three and a half per cent. for seven years, and to three per cent. thereafter; and in 1750, the interest of the remainder was reduced to three and a half per cent. for five years, and to three per cent. thereafter, by which a further saving of about L.600,000 was added to the sinking fund.

The opinion, strongly urged since by Dr. Price, seems to have been entertained at that time, of the importance of applying the produce of the sinking fund invariably to the discharge of the national debt, and borrowing by new loans, when the public exigencies required it. Accordingly, about eight millions were borrowed towards the supplies between 1718 and 1732, being a period

period of peace.\* The sums applied from the sinking fund to the discharge of the national debt, from 1716 to 1728, amounted to L.6,648,000, being nearly equal to the additional debt contracted in that time. About five millions more were paid between 1728 and 1733. The interest of several loans contracted between 1727 and 1732, was charged upon surplus duties, which, according to the original plan, ought to have been appropriated to the sinking fund.

Soon after, the principle of preserving the sinking fund inviolable was abandoned. In 1733, L.500,000 was taken from that fund, and applied to the services of the year. The reason for adopting that measure was to keep the land-tax, the burthen of which was then much complained of by the landed interest, at the low rate of a shilling in the pound. In 1734, L.1,200,000 was taken from the sinking fund, for current services; and in 1735 it was anticipated and mortgaged.

In the loans contracted after the establishment of the sinking fund, and charged upon special duties, that fund was made a colateral security. By this arrangement, when a tax produced less than was charged on it, the sinking fund supplied

T

the

\* The particulars were given in our former editions, from Dr. Price's appeal to the public, amounting to L.6,168,732 before 1729, and to L.8,418,732 before 1732. If, instead of these sums, we take the loans as stated above, pages 82, 83, and 84, the difference is not important.

the deficiency ; but when it produced more, the overplus, instead of being applied to the sinking fund, was carried to the service of the year. By an act passed in 1752, another regulation was introduced : All the new taxes were appointed to be carried directly to the sinking fund, which was charged with the interest on the loans. At first, the sinking fund lost more than it gained by this arrangement, as most of the new taxes proved deficient ; but this loss was afterwards more than recompensed.

The only deviation from this plan was the additional tax upon houses and windows, granted in 1758, and applied directly to the payment of the interest of the loan contracted that year, without being carried to the sinking fund. This tax proving deficient, the deficiency was made good from the sinking fund, and afterwards replaced from the supplies.

The produce of the sinking fund, at its commencement in 1717, was, - L.323,437  
Medium annual produce, from 1717

to 1726, both inclusive,	-	577,614

— 1757 to 1766,	-	2,059,406
— 1765 to 1769,	-	2,234,780
— 1770 to 1774,	-	2,610,759

In

In 1775,	-	-	L.2,917,869
1776,	-	-	3,166,517
1777,	-	-	2,685,669
1778,	-	-	2,442,063
1779,	-	-	2,267,399
1780,	-	-	2,403,017

The sinking fund would have risen higher, had it not been depressed, especially in the later period, by various incroachments. It was charged with the interest of several loans, for which no provision was made; and in 1772, it was charged, with an annuity of L.100,000, granted in addition to the civil list. During the three wars which were waged while it subsisted, the whole of its produce was applied to the expense of the war; and even in time of peace, large sums were abstracted from it for current services. According to Dr. Price, the amount of public debt paid off by the sinking fund, since its first alienation in 1733, was only

Three millions paid off in 1736 and 1737.

Three millions in the peace between 1748 and 1756.

Two millions and a half in the peace between 1763 and 1775.

In all, eight millions and a half,

The additional debt discharged during these periods of peace was effected, not by the sinking fund, but from other sources.

On the whole, this fund did little in time of peace, and nothing in time of war, to the discharge of the national debt. The purpose of its inviolable application was abandoned, and the hopes entertained of its powerful efficacy entirely disappointed. At this time, the nation had no other free revenue except the land and malt tax, granted annually; and as the land tax during peace was then granted at a low rate, their produce was inadequate to the expense of a peace establishment, on the most moderate scale. This gave occasion to the incroachments on the sinking fund. Had the land tax been always continued at four shillings in the pound, it would have gone far to keep the sinking fund, during peace, inviolate.

This fund terminated in 1786, when the arrangements detailed in the following section, were adopted.

---

## SECTION II.

### MR. PITT'S SINKING FUNDS.

1786.

THE present sinking fund was established under Mr. Pitt's administration, in 1786. The various branches of revenue then existing were united under the name of the consolidated fund.\* One million

\* See Note XXIII.

million taken from that fund, was vested annually in the hands of Commissioners for the redemption of the national debt, to be applied for purchasing capital in such stocks as they should judge expedient, at the market prices. To this fund was to be added, the interest of the debt redeemed, and annuities fallen in by the failure of lives, or the expiry of the terms for which they were granted, and life annuities unclaimed for three years were considered as expired, and added to the sinking fund. When this fund amounted to four millions, it was enacted, that the interest of the redeemed debt, and annuities fallen in, were no longer to be applied to it, but remain at the disposal of Parliament.

1792.

Another sinking fund was established this year, of one per cent. on the nominal capital of each loan, to which the dividends on the capital redeemed by this fund were to be added. When annuities for a longer term than forty-five years, or for lives, were granted, the value which would remain after forty-five years, was appointed to be estimated, and one per cent. on that value set aside for their redemption. This fund was appointed to be kept separate, and applied for the redemption of the debts contracted subsequent to its institution, by which means it was estimated that

that every loan would be redeemed in forty-five years\* at furthest from its contraction.

In the same year, L.400,000 was granted in aid of the former sinking fund, and L.200,000 was granted by annual acts for the same purpose, till 1802, when the grant was rendered perpetual. Savings by reduction of the rate of interest of the national debt, were appointed to be added to that sinking fund; but no savings of this kind have taken place since its commencement.

1798.

This year, the application of one per cent. on the capital of the loans to the sinking fund, was deviated from. A part of the loan, (16 millions capital,) was charged on a tax then imposed, called the aid and contribution tax; for which the income tax was substituted the following year. In like manner, a part, or the whole of the loans for several years, was charged on the income tax, and no sinking fund of one per cent. provided for their redemption. The amount of capital for which no sinking fund of one per cent. was provided, is L.86,796,375. This system was abandoned in 1802, when all the loans were united, and the interest of these loans charged on the consolidated fund.

1802.

\* See Note XXIV.

The two sinking funds were united, applicable to the discharge of debts existing in 1802; and the system of a sinking fund of one per cent. on loans subsequent to 1802, was revived, and has been followed in all the subsequent loans till 1813, except that of 1807, when Lord Henry Petty's system was adopted. The limitation of the sinking fund to four millions, enacted at its commencement, and a similar limitation in 1792, were repealed; and the application of annuities whose term was expired, and of savings by the reduction of the rate of interest, to the sinking fund, was repealed.

Table VI. contains a state of the loans from 1793, distinguishing those that were charged and those that were not charged with the sinking fund of one per cent. and the present amount of that fund.

---

### SECTION III.

#### LORD HENRY PETTY'S PLAN OF FINANCE.

A new plan of finance was proposed to Parliament in 1807, by Lord Henry Petty, (now Marquis of Lansdown,) Chancellor of the Exchequer, and adopted in the arrangement of the loan for that year.

The

The annual expenditure during war, was estimated at L.32,000,000 beyond what the surplus of the consolidated fund, and the annual taxes, could supply. The war taxes were estimated at 21 millions, viz. property tax, L.11,500,000, and other articles, L.9,500,000. The annual deficiency to be supplied by loan was therefore 11 millions, which were proposed to be raised by mortgaging the war taxes to the extent of ten per cent. on the sum borrowed ; the surplus of which sum mortgaged, after paying for interest and management, was to form a sinking fund for redeeming the debt, and thereby disengaging the part of the war taxes mortgaged, in a certain number of years, according to the rate of interest at which the loan was transacted. Thus, if the interest and management was five per cent. there would remain five per cent. as a sinking fund, and this would pay off the debt in fourteen years. The sums proposed to be borrowed in this manner were 12 millions for the first three years, 14 millions for the fourth, and 16 millions for each of the succeeding ten years, amounting altogether to 210 millions, for which, at the rate of ten per cent. the whole of the war taxes would be mortgaged : But the debt contracted the first year being now paid off by the sinking fund appropriated to it, the portion of the war taxes mortgaged for it would be set free, and be applicable to the loan of the following year ; and another portion being

being set free the following and each succeeding year, these loans might be continued on this system without limitation of time.

But as the sums mortgaged for these loans were withdrawn from the war taxes, it was necessary to replace the same; and this was proposed to be done by raising supplementary loans, the annual amount of which would be equal to the sum mortgaged, deducting the excess of the war tax loan for the year, above the sum of L.11,000,000 wanted.

Thus, the first year, the sum borrowed is,

.	-	-	-	L.12,000,000
Of which required,	-	-	-	11,000,000

Excess,	-	-	-	<u>L.1,000,000</u>
---------	---	---	---	--------------------

Portion of war taxes mortgaged,	-	-	-	L.1,200,000
---------------------------------	---	---	---	-------------

Deduct above excess,	-	-	-	<u>1,000,000</u>
----------------------	---	---	---	------------------

Sum to be raised by supplementary

loan, first year,	-	-	-	L.200,000
-------------------	---	---	---	-----------

The second year an equal portion of the war taxes was proposed to be mortgaged, amounting, together with the former, to

-	-	-	-	L.2,400,000
---	---	---	---	-------------

Deduct excess of loan as before,	-	-	-	<u>1,000,000</u>
----------------------------------	---	---	---	------------------

Sum to be raised by supplementary

loan, second year,	-	-	-	<u>L.1,400,000</u>
--------------------	---	---	---	--------------------

In this manner, the supplementary loan of the fourteenth year, would amount to 16 millions, and the amount of these loans for fourteen years, to L.94,200,000. In the fifteenth year, it would amount to 20 millions, which sum it would never exceed, and never fall below 16 millions. In twenty years, the amount of these loans would be L.204,200,000 ; and in each period of fourteen years after the first, the amount of supplementary loans would be 238 millions.

A sinking fund of one per cent. on the nominal capital, supposed funded in the three per cents. at 60, and therefore equal to 1-60th of the sum borrowed, was, agreeably to the system of 1792, to be added to the interest of these supplementary loans ; and this charge to be provided for by imposing new taxes. It was proposed to diminish the amount of these taxes, or to supersede them altogether, by taking aid from the falling in of annuities, and from the surplus of the present sinking fund, after the amount of the same should exceed the interest of the debt remaining unredeemed. This surplus was expected to become available in the year 1817.

If a larger sum than 11 millions was required for the service of any year, it was to be raised by other arrangements.

As the ministry who planned this system did not continue long in office, it was never followed out after the first year. Its merits will be considered afterwards.

## SECTION IV.

## MR VANSITTART'S PLAN OF FINANCE.

THE plan of finance proposed in 1813 by Mr. Vansittart, and adopted by Parliament, is a modification of Mr. Pitt's sinking funds ; and, among other objects, is intended to rescind the alterations, which have been made in these funds, as originally established in 1786 and 1792, by subsequent acts of Parliament, and restore them, as far as practicable, to the state in which they would have stood if no such alterations had taken place. It will be proper, therefore, to recapitulate the original enactments and alterations, in order to render the new system more clearly intelligible.

The original sinking fund of 1786, consisting of an annual grant of L.1,000,000 from the consolidated fund, (increased in 1792 to L.1,200,000) together with the interest of the debt redeemed, and annuities for lives or years which might expire, but limited not to exceed four millions, was appropriated for the redemption of the debt then existing, of L.238,231,248 ; and therefore when a sum of redeemed debt, to that amount, should be vested in the hands of the Commissioners, that debt was to be considered as discharged.

In 1792, when the war with France commenced, and new loans became necessary, a

sinking fund of one per cent. was created on the nominal sum of each loan, which, it was estimated, would redeem it within 45 years at farthest from its contraction. In the succeeding years this system was so far deviated from, that loans to the amount of L.86,796,375 were contracted, without any sinking fund being provided for their discharge.

Had the original system of 1786 and 1792 been adhered to, so soon as the debt of 1786 was redeemed, the nation would have been eased of taxes to the amount of the interest of that debt, and of the sum appropriated to the first sinking fund; or these sums, or any part of them, might have been reserved for the charge of such loans as the exigencies of the times should require.

Also, after 45 years, or perhaps a shorter period, from the contraction of each loan; the nation would have been eased of taxes to the amount of the interest and sinking fund of that loan, or these sums reserved to bear the charge of future loans, as above-mentioned.

In 1802, the two sinking funds were united and appropriated to the discharge of the debt existing at that time, amounting to L.567,008,978, or, deducting the part then redeemed, to L.499,753,063, besides annuities for lives or years. The limitation of the sinking fund to four millions was repealed; and loans contracted in future were to be accompanied with a sinking fund

fund of one per cent. ; each sinking fund of this kind being applied, agreeably to the enactment of 1792, to the separate discharge of the loan to which it was attached, until that loan was completely discharged ; and then to terminate, or be released for future exigencies.

The effects produced by these alterations in the sinking funds were,

1st. The prospect of any relief from existing burthens, or the release of any funds at present appropriated, for future exigencies, was protracted by the union of the sinking funds to a more distant period. By the original plan, such relief would have taken place when the debt of 1786, (amount L.238,231,248,) was redeemed, which was expected about 1813. By the union of the sinking funds, no relief could be obtained till the debt of 1802 (amount L.499,753,063) should be relieved, which was not expected till 1830.

2d. By repealing the limitation of the sinking fund to four millions, the united amount has been increased far beyond what was originally intended.

3d. The amount of taxes for supplying this enlarged sinking fund has been much increased, at the same time that no relief is obtained from the repeal of the taxes appropriated to the redeemed debt, until the whole debt existing in 1802 shall be redeemed.

The

The design of Mr. Vansittart's plan is to counteract these effects ; to provide at present that relief which the public would have obtained from the original plan ; to restrain the excessive increase of the sinking fund ; and, at the same time, to afford equal security to the public creditors as they were entitled to by the act of 1792, by securing the redemption of each loan in some way or other, within a period not exceeding 45 years at farthest from its contraction.

For these purposes it was proposed, 1st, That whereas a sum equal to the debt of 1786, and bearing an interest nearly equal to the interest of that debt, is now vested in the hands of the Commissioners ; that so soon as the interest of the debt redeemed shall become fully equal to that of the debt of 1786, that debt should be declared discharged, and the sums hitherto appropriated for the interest and sinking fund of the same shall be appropriated, so soon as required, to bear the charge of future loans ; and therefore no new taxes should be imposed for the interest or sinking fund of the new loans, till the same amount to a sum equal to the interest of that considered as released. By this means the supposed loans of 1813, 1814, 1815, 1816, and part of that of 1817, were expected to be defrayed without any additional taxes.

2d. Whereas loans to the extent of L.86,796,375 were charged on the consolidated fund in 1802,  
without

without any sinking fund attached to them, in consideration that the advantages abovementioned, given to the general sinking fund by the enactments of that year, enabled it to bear that burthen ; it was proposed, now that these enactments are partially repealed by the new system, in order to place the public creditors in a situation equally favourable to what they held by the establishment of 1792, that the one per cent. sinking fund on the abovementioned sum, amounting to L.867,963, should be replaced to it.

3d. That as the amount of exchequer bills in circulation, and not redeemed within the year, has much increased, and was then about L.26,000,000, that a sinking fund of one per cent. on that sum, or L.260,000, should be provided ; and that taxes to the amount of L.1,127,963 should be imposed the first year, to meet that sum, together with the sum mentioned in the last article ; and that, in like manner, a sinking fund of one per cent. should be annually provided for any addition to the amount of exchequer bills in circulation, for the discharge of which, within the year, no funds are provided.

4th. That, in future, instead of allocating the sinking fund of one per cent. for the discharge of each separate loan, the whole funds of this kind should be united, and applied to the discharge of the first contracted loan ; and so soon as a sum equal to that loan shall be redeemed, the charge

on

on the same should be considered as released for the public service ; and in like manner each successive loan should be redeemed, and its charge released, in the order of their contraction, by the united produce of the sinking funds appropriated for the redemption of all the loans contracted since 1792 : But the whole sinking fund created by the act of 1786, or by any subsequent acts, should be continued and applied, until the total redemption of all the debt now existing, or to be created during the present war.

5th. As, by this arrangement, the discharge of successive loans, instead of commencing from their contraction, is postponed till all prior loans be discharged ; in order more effectually to secure the payment of each loan within forty-five years, a sinking fund, for the excess of the loan above the sum applicable in the same year to the reduction of the public debt, should be provided, equal to one half of the interest, and a sinking fund of one per cent. on the nominal capital of the remainder, agreeably to the act of 1792.\*

6th. That the amount of taxes imposed each year should be determined as follows :—The time of the discharge of each loan, according to article 4th, being estimated, and the charge on the loan for the year, according to article 5th : Then, if no loan falls in within the year, new taxes should be imposed equal to the interest and sinking fund  
of

\* See Note XXV. Also Table XI.

of the loan contracted ; but, if one or more loans fall in, the interest on these loans, being released, shall be appropriated to the charge of the new one, and taxes imposed for the surplus only ; and if the interest on the loans released exceed the charge on the loans contracted, no taxes shall be imposed that year ; and the surplus of interest released shall be reserved in aid of the charge of the loan of the subsequent year.

---

#### SECTION V.

##### REDEMPTION OF THE NATIONAL DEBT BY THE PURCHASE OF THE LAND TAX.

TAXES in various forms have been frequently but not permanently imposed on land in England, from a very remote time. The present land tax commenced at the Revolution, and was brought to its present form in 1692, when a valuation of the land was made, and although considerably below the real value at the time, it afforded a revenue of about L.500,000, at one shilling per pound, including a like tax upon personal property, estimated at a very low rate. The valuation made at that time has never been altered ; and the tax has been imposed annually till 1798, sometimes at one shilling, sometimes at two shillings, sometimes at three shillings, most frequent-

ly at four shillings, which rate it has never exceeded. This tax was long considered as a heavy burthen, and much resisted by the landed interest. Of late years it has been less regarded, partly from the increasing influence of the mercantile interest, and partly from its becoming, in consequence of the increase of the rent of land, the deterioration of the value of money, and the general magnitude of our taxes, comparatively an inferior object.

In 1798, the land tax was rendered perpetual at four shillings per pound, and the proprietors were empowered to purchase the sums charged on their estates for capital in the three per cents. affording an equal dividend. If they did not accept this offer within a limited time, it might be sold to others for capital affording a dividend of one-fifth more than the tax purchased. The term for purchase has been since repeatedly extended, and various regulations enacted. In consequence of these enactments, the purchases of land tax amounted the first year to L.13,059,586 in the 3 per cents., and the second year to L.3,034,216, but afterwards the purchases went on languidly; and after eighteen years the amount of capital transferred for this purpose, on the 1st February, 1817, was L.25,290,994, the interest of which, L.758,730, was deducted from the national charge; but nearly an equal sum of land tax being redeemed, was deducted from the national revenue,

venue, being somewhat more than one-third of the whole. In order to encourage the completion of this scheme, an act was passed, session 1813, in which terms more advantageous to the purchaser were offered.\*

This plan is, in effect, no other than a transfer of part of the capital of the funded debt from the former stockholders to the landed proprietors. These last pay a value for the capital with which they redeem their land tax, and their relief from that tax is equivalent to their receiving a dividend to the same extent. The landholders may still be considered as subjected to the land tax at its highest rate ; though some of them pay it by drawing a dividend for capital in the funds, which they have purchased for value, and have thereby become stockholders to that extent. The public revenue may still be considered as drawing the whole of the land tax, and paying the whole of the dividends. Could the portions of other taxes payable by particular classes of men be ascertained, it might as well be proposed to them to purchase an exemption from these taxes. Such of them as were able might embrace the offer, and after they had paid the value and received their exemption, they would be exactly in the same circumstances as if they had purchased capital in the funds, drawn their dividends, and applied them in payment of taxes. The public, in like

x 2

manner,

\* See Note XXVI.

manner, would lose in taxes what they saved in dividends. We cannot, therefore, consider the part of the national debt redeemed by the purchase of the land tax as affording any relief to the public burthens.

It has always been considered as necessary, upon the principles of the British constitution, that part of the taxes should be granted annually by Parliament as a restraint on the power of the Crown. The land and malt taxes, producing about L.2,700,000 annually, were formerly reserved for this purpose. Since the land tax was rendered perpetual, certain duties on sugar and tobacco, and on offices, pensions, and salaries, have been granted annually, together with the malt tax. The average net annual amount of these taxes for three years preceding 5th January, 1817, was L.5,040,195.

---

## SECTION VI.

### OPERATION OF THE SINKING FUNDS.

THE amount of money applied for the redemption of the national funded debt, and of capital and interest redeemed since the commencement of the sinking fund in 1786, to 1st February, 1817, and the produce of the sinking fund at that time, are as follows :

3 per

	Sums expended.	Capital redeemed.	Interest redeemed.
3 per cents. -	176,652,174	283,777,272	8,513,319
4 per cents. -	6,586,934	7,796,400	311,856
5 per cents. -	130,113	145,500	7,275
	183,369,223	291,719,172	8,832,450
Unclaimed for 10 years, 3 per cents.		176,441	5,293
4 per cents.		16,313	652
5 per cents.		19,503	975
3 per cent. reduced stock, purchased with unclaimed dividends, -		327,000	9,810
		292,258,430	8,849,181
Converted into life annuities, -		3,449,955	103,498
Long annuities converted into life annuities, -		-	4,420
Transferred to purchase land tax, -		25,290,994	
		320,999,379	8,957,100
Permanent annual grant, 26 Geo. III.		-	1,000,000
Additional annual grant, 42 Geo. III.		-	200,000
Amount of 1 per cent. on loans preceding 1st February, 1813, -		4,683,542	
On loans 1798, 1799, 1800, and 1802, not formerly charged, -		867,963	
Sinking fund on long annuities, -		49,548	
			5,601,053
Sinking Fund on Exchequer Bills, -			260,000
Sinking fund on Lord Henry Petty's plan, -			626,255
Sinking fund on loans 1813, 14, and 1815, on Mr. Vansittart's plan, -			2,756,518
Annuities of which the term is expired, -			79,880
Annuities, of which the nominees died prior to 5th July, 1802, -			21,481
Annuities unclaimed for 3 years, -			28,833
Long annuities unclaimed for 10 years, -			471
			19,531,598
Deduct charge on loans 1813 and 1814, on Mr. Vansittart's plan, -		L.5,782,969	
Part of charge on loan 1815, -		1,850,000	
			7,632,969
			11,898,629
Also life annuities charged on this fund, -			225,255
Sinking fund, 1st February, 1817, -			11,673,374

The sum payable to the Commissioners for the Reduction of  
the National Debt, by official account, 5th January, 1817,

was,	-	-	L.11,869,790
Add unclaimed annuities,	-	-	28,838
			<hr/>
			L.11,898,629

The 3 per cents. were redeemed, at an average,  
nearly at  $62\frac{1}{4}$  per cent.

The 4 per cents. at  $84\frac{1}{2}$ .

The 5 per cents. at  $89\frac{3}{8}$ .

The debt funded before 1st February, 1817,

was,	-	-	L.1,003,768,694
Of which transferred for life annuities,	-	-	3,449,955
			<hr/>
			L.1,000,318,739
Transferred for land tax,	-	-	25,290,994
			<hr/>

Transferred to Commissioners, L.975,027,745

For stock purchased by sinking  
fund, -

L.291,719,172

Unclaimed for 10 years, - 212,258

Stock purchased with unclaimed  
dividends, - -

327,000

---

292,258,430

Unredeemed debt of Britain, 1st February 1817, L.682,769,315

Which debt was invested in the following funds:

Bank annuities,	-	-	L.14,686,338
Loan of 1726,	-	-	1,000,000
South Sea annuities, including loan of 1751,			14,345,685
3 per cent. consolidated,	-	-	345,305,810
3 per cent. reduced,	-	-	104,747,599
			<hr/>

Carried forward, - L.480,085,432  
4 per

Brought forward,	-	L.480,085,432
4 per cents.	-	68,965,030
5 per cent. navy,	-	L.132,660,349
Ditto loyalty,	-	1,058,503
		<hr/> 133,718,852
		<hr/> L.682,769,315
Debt cancelled,	-	L.251,738,858
Redeemed debt standing in the name of the		
Commissioners,	-	40,519,572
		<hr/> L.292,258,430

Table III. contains the amount of the capital funded debt each year,\* the amount redeemed each year, and the balance, or difference, between the capital funded and the capital redeemed; also the whole funded debt existing each year, without regard to redemption; the whole debt redeemed, and the whole debt unredeemed. But this gives an imperfect view of the progress of the public debt; for the loan of the year is perhaps made in the five per cents., and the redemption in the 3 per cents.; and therefore, if the capitals only be exhibited, the debt redeemed will appear more in proportion to the debt contracted than it really is. Therefore, other columns are inserted, exhibiting the value of the capital funded, the capital redeemed, and the balance, reduced to 3 per cents.; the reduction of the capital being made in proportion to the rate of interest, when the loan is wholly or partially funded at a higher rate than 3 per cent.

If the whole of the present funded debts were reduced to three per cents. the amount would stand as follows:

3 per cents.	-	L.480,085,432
Value of L.68,965,030—4 per cents.	-	91,953,373
of 133,718,852—5 per cents.	-	222,864,753
		<hr/> L 794,903,558

And

\* See Note XXVII.

And if this be reduced to 5 per cents. or the sum for which it might be redeemed when the 3 per cents. are at 60, it comes to L.476,942,135.

## SECTION VII.

### IRISH, IMPERIAL, AND PORTUGUEZE SINKING FUNDS.

A SINKING fund for the redemption of the IRISH DEBT payable in Britain, was established in 1797, similar to the British one per cent. sinking fund of 1792.

The amount of this sinking fund, 1st February, 1817, was L.1 per cent. on L.103,032,750, being the amount of the Irish debt payable in Britain, and guaranteed, - - L.1,080,327  
Sinking fund on long annuities, - 9,258  
Interest of L.19,087,846, redeemed at 3 per cent. 572,635

Amount of sinking fund for Irish debt, payable in Britain, and guaranteed, - L.1,612,220

The capital of Irish debt funded in Britain, and guaranteed, 1st February, 1817, was - L.103,032,750  
Of which redeemed in 3 per cents. - 19,087,846  
Unredeemed debt, - - L.83,944,904

This capital is invested in the following funds :

3 per cent. cons. - - L.32,819,955  
3 per cent. reduced, - - 42,948,574  
4 per cents. - - 5,954,375  
5 per cent. navy, - - 2,222,000  
L.83,944,904

Which, reduced to 3 per cent., amount to - L.87,411,028  
And to 5 per cents. - 54,446,617  
Besides

Besides this capital, L.129,583 of long annuities have been contracted, which expire in 1860.

The sum paid for redeeming the above capital of L.19,087,846, was L.11,873,490, being about 62 3-16ths at an average.

Table IV. contains, besides the particulars abovementioned, the Irish debt, payable in London, redeemed each year, the total redeemed, and the balances unredeemed.

There was also a sinking fund established at the same time for the redemption of the Irish debt payable in Ireland, which consists of a permanent grant of L.67,649, of a charge of one per cent. on the loans payable in Ireland, contracted since, of dividends on stock redeemed, and of annuities fallen in. The sum appropriated annually to the sinking fund was L.100,000 Irish currency; of which, L.32,351 was appropriated for the reduction of the debt borrowed in Britain, for Ireland, in 1797; and the remainder, L.67,649, together with the expired annuities, to the reduction of the remainder of the Irish debt existing before 1797:\* and since 1813, an allowance of one per cent. on Irish treasury bills has been added to this fund.

The amount of capital debt payable in Ireland, redeemed on the 5th January, 1817, was

		Irish currency.
In the $3\frac{1}{2}$ per cents.	-	L.6,478,739
In the 4 per cents.	-	471,450
In the 5 per cents.	-	1,862,472
		<hr/> L.8,812,662
Which was redeemed for	-	<hr/> L.6,976,521

And there was redeemed between 5th January,  
and 1st February, 1817, in the  $3\frac{1}{2}$  per cents. - L.106,700  
y Making

\* There have been some small variations in the distribution of this sum since its commencement.

Making the whole sum redeemed, 1st February,

1817, - - L.8,919,362

---

Of which cancelled,

3½ per cents. - L.2,231,914

4 per cents. - 294,500

5 per cents. - 1,852,072

---

L.4,378,486

Uncancelled,

3½ per cents. - L.4,353,525

4 per cents. - 176,950

5 per cents. - 10,400

---

4,540,876

---

L.8,919,362

---

The interest on debt redeemed, 5th January,

1817, was,

On L.5,478,739, at 3½ per cent. - L.226,755

On 471,450, at 4 per cent. - 18,858

On 1,862,472, at 5 per cent. - 93,123

---

L.338,738

On L.106,700, at 3½ per cent. redeemed

before 1st February, 1817, - - 3,734

---

L.342,472

---

The debt remaining unredeemed, 1st February,

1817, was,

3½ per cents. - - L.10,795,534

4 per cents. - - 678,650

5 per cents. - - 13,807,309

---

L.25,281,493

---

Which, in British currency, is - L.23,336,763

---

The

The interest on the unredeemed debt, 5th January, 1817,  
was,

		Irish currency.
On L.10,795,534, at $3\frac{1}{2}$ per cent.	-	L.377,843
On 678,650, at 4 per cent.	-	27,146
On 13,807,309, at 5 per cent.	-	690,365

\* See Note next page.

Such is the extent of the funded debt, due, or guaranteed by Britain, and the annual charge attending the same. It cannot now be doubted that the Imperial and Portuguese debt are as much a charge upon Britain as any part of its proper debt ; and the suspicions formerly entertained that the Irish debt might terminate in the same manner, are now fully verified.

---

• We have not stated the expense of management of the debt in Ireland. The management of the whole Irish debt is stated in the official account at L.30,505 ; but that of the Irish debt funded in Britain alone, when reduced to Irish currency, exceeds this sum.

## CHAPTER III.

### UNFUNDED DEBT.

THERE is always a large sum, besides the funded debt, due by the British government. This may arise from any national expense for which no provision has been made, or the provision has proved insufficient, or not forthcoming at the time wanted. The forms of the unfunded debt are various ; but the following are the principal branches.

I. **EXCHEQUER BILLS.** These are issued from the exchequer, in consequence of acts of Parliament, several of which are passed every session. The first were issued in 1696, to the amount of £2,700,000, and being intended as a temporary substitute for money during the recoinage at that period, some of them were then so low as £10 and £5. There are none issued now under £100, and many of them are for £500 and £1000.— They bear interest at various rates, from 2d. to 3½d. per day for £100 ; and being distributed among those who are willing to advance their value, they form a kind of circulating medium. After a certain time, they are received in payment

Z

ment of taxes, or other monies due to government ; and the interest due on them at the time is allowed in the payment. They cease to bear interest when in the hands of the revenue collectors, or other public officers, and when called in by Government. The Bank of England often engages to receive them to a certain extent, and thereby promote their circulation ; and the daily transactions between the bank and the exchequer are chiefly carried on by bills of L.1000, deposited in the exchequer by the bank, to the amount of the sums received by them on account of Government.

These bills are sometimes granted on the credit of the supplies for the present or the subsequent year ; and in this way the produce of the annual taxes is generally anticipated ; and a large sum is generally authorized to be raised on them in time of war, to answer exigencies, by an act, proceeding upon what is called a vote of credit, passed near the conclusion of each session of Parliament. New exchequer bills are frequently issued in discharge of former ones ; and they are often converted into funded debt, by granting capital in some of the stocks, on certain terms, to such holders as are willing to accept them.—The operations of this kind since 1791, have been already detailed.

**II. NAVY BILLS.** These are issued from the navy office, to answer any purpose in that important branch of national expenditure; and they bear interest after a certain date, if not discharged. A practice had long prevailed, when the number of seamen for the service of the year was voted, to grant a sum estimated at the rate of L.4 per month for each man, allowing 13 months to the year, for the whole naval expense; wages, victualling, wear of shipping, and ordnance, included. In consequence of the deterioration of the value of money, this allowance became insufficient; and navy bills, to a large amount, were issued to supply the deficiency; and these were often funded afterwards in the same manner as exchequer bills. Since 1797, this practice has been discontinued; and sums, considered as adequate in the present circumstances, voted at once for the service of the navy; since which, the amount of the navy bills has not been so great as formerly; and they have been paid from the money granted for the navy, without recurring to the system of funding. By an act, 37 Geo. III. all navy bills were to be made payable at a period not later than 90 days from the time when issued, with interest not exceeding  $3\frac{1}{2}$  per cent. from their date; but by an act passed last session (1817), the restriction to 90 days was repealed.

III. **ORDNANCE BILLS, or DEBENTURES**, are issued in like manner from the ordnance office, for supplying the exigencies in that branch of expenditure.

Victualling and transport bills are issued from the respective offices in the same manner. There is also always a large amount of floating debt at the navy, victualling, transport, and ordnance offices, for which no bills have been issued.

Table XII. exhibits the amount of exchequer bills, navy bills, and ordnance bills, and other debts at these offices, and the whole amount of unfunded debt, in these three branches, on the 5th January of each year, from 1793 to 1817; also the increase or decrease during the preceding year; and the interest on exchequer bills since 1799. The fluctuation of the unfunded debt explains in part the cause of the great inequality of the addition to the funded debt in different years, and must be taken into consideration along with the increase of the funded debt, after reducing both to the same rate of interest, in order to form a judgment of the whole increase of the public debt in any year.\*

A singular kind of debt was contracted in the financial arrangements of the year 1813. The holders of exchequer bills proposed to be funded, and who were willing to contribute a further sum, payable by instalments, to the extent of one half

\* See Note XXVII.

nalf of the bills funded, on the terms proposed, received assignable debentures, bearing interest at 5 per cent. and payable half yearly at the same terms as the 3 per cent. reduced stock ; the holders of which were entitled to demand payment in money, on the 5th April, 1815, or the 5th April of any succeeding year, upon three months previous notice ; or, in place of money, to receive for each L.100 in said debentures, L.100 in the 5 per cent. cons., L.120 in the 4 per cent. cons., or L.150 in the 3 per cent. reduced, in option of the holder ; and those remaining unfunded to be finally paid off 12 months after the conclusion of peace. The sum raised in this manner was L.799,300 ; of which, L.7,400 was funded in the 3 per cent. reduced, in 1814, for L.11,100, and money was provided for paying off the remainder in 1816. This part of the public debt seems not to have been included in the accounts presented to Parliament.

Besides these principal branches of the unfunded debt, there are always a number of demands on the public, for bills accepted by the treasury ; army charges, and miscellaneous services of various kinds. These are daily fluctuating, and their amount at any particular time cannot be easily ascertained.

The amount of these debts on the 5th January each year since 1811, together with the whole amount of the unfunded debt as reported to Parliament

liament these years, and the annual increase, are subjoined to the Table.

The amount of the three great branches, 5th January, 1817, was	-	-	L.46,777,672
Miscellaneous articles,	-	-	3,269,416

---

Amount reported to Parliament,		L.50,047,088
--------------------------------	--	--------------

---

Increase of funded debt in 1816,		L.1,321,729
----------------------------------	--	-------------

---

To these sums a large addition may be made, for demands due by the public, not brought to account.

The outstanding taxes, due to the public, may be placed against the unfunded debt. While the property tax subsisted, a large arrear was generally due, sometimes amounting to eight millions; but since the repeal of that tax, and the collection of its arrears, the sums of this kind due to the public are inconsiderable.

The imprest monies, or sums in the hands of the treasurers of the army and navy, and other public accountants, and which, so far as not expended, are refunded to the public at clearance, may also be stated against the unfunded debt. The amount of these cannot be ascertained.

The unfunded debt of Ireland, on the 5th January, 1817, was L.5,774,883 Irish currency.

## PART III.

### EXAMINATION OF PLANS FOR THE REDEMPTION OF THE NATIONAL DEBT, AND OTHER FINANCIAL OPERATIONS.

---

#### CHAPTER I.

##### *Examination of Dr. Price's Views of Finance.*

DR. PRICE's views of the national debt were first announced in his *Treatise on Reversionary Annuities*, in the year 1771 ; and more fully unfolded in an appeal to the public on that subject, published the following year ; and in some subsequent publications.

His plan for the redemption of the national debt, is the application of a certain sum of money annually, set apart from the rest of our annual revenue, and appropriated for the purchase of stock at the current prices ; the interest of the part of the debt thus redeemed being always added to the original sum, to increase the operation of the fund. This system to be inviolably followed,

lowed, in time of war as well as in time of peace ; and money, when wanted, to be raised by new loans, as if no such fund existed. To secure the steady execution of this plan, the management of the fund to be committed to special Commissioners ; acting under penalties in such a manner as would take it out of the hands of the treasury, and form a check upon the House of Commons itself.

The efficacy of this plan depends upon the operation of compound interest, which he considers as omnipotent. Money, he says, bearing compound interest, increases at first slowly ; but the rate being continually accelerated, it becomes in some time so rapid as to mock all the powers of imagination.

He proceeds to illustrate and enforce his plan in the following manner.

There are three ways in which a nation may apply a sinking fund :

1st, The interests disengaged by it from time to time may be applied in redeeming the public debt.

2d, They may be applied to current services.

3d, They may be immediately annihilated by abolishing the taxes charged with them.

In the first way of employing a sinking fund, it always increases, and that with a force which is continually accelerated ; and which, therefore,  
however

however small at first, becomes at length equal to any effect. In the second way, it admits of no increase; because it always acts with the same force. In the first way it resembles a grain of corn sown, and the produce sown again, and so on; which will soon afford an increase sufficient to support a kingdom. In the second way, it resembles a seed, the produce of which is consumed. What has been said of the second way, is true in a higher degree of the third. A fund of the first sort is money bearing compound interest; a fund of the second sort is money bearing simple interest; and a fund of the third sort is money bearing no interest at all.

In illustration of this, the Doctor supposes an annual sum of L.200,000, set aside as a fund for keeping the debt, *which the nation is continually incurring*, in a state of redemption. If applied the first way, a debt of L.200,000 is discharged the first year, which, supposing interest at five per cent., disengages an annuity of L.10,000. If this annuity, instead of being spent on services, is added to the fund, and both employed in paying debts, an annuity of L.10,500 will be disengaged the second year, or L.20,500 in both years. Computing in this manner, the amount of annuities disengaged increases faster each succeeding year, and in 86 years, becomes L.13,083,000, which, being added to the original sinking fund, amounts to L.13,283,000. The full value, there-

fore, of an annuity of L.13,083,000, will have been paid off in eighty-six years, that is, nearly 262 millions of debt; and consequently, though the state had been adding three millions to its debt every year, or 258 millions altogether, it would have been more than discharged, and that at no greater expense than the annual saving of L.200,000.

In the second way, the sum of annuities disengaged by it would have been eighty-six times L.10,000, or L.860,000, and the discharged debt would have been L.17,200,000; but besides this, there would be a debt saved, in consequence of applying every year the disengaged annuities to current services; for which, otherwise, equivalent sums must have been borrowed. L.10,000 will be saved at the beginning of the second year; L.20,000 at the beginning of the third year; and L.850,000 at the beginning of the eighty-sixth year; and altogether, L.36,550,000, which, added to the L.17,200,000 of debt discharged, makes the advantage to the public, from this plan, in eighty-six years, L.53,750,000; and as it was 262 millions by the first one, the difference to the public in its favour, is L.208,250,000.

In the third way, the whole advantage derived from it, is the discharge of a debt of L.200,000 annually, or L.17,200,000 in all.

Such is the substance of Dr. Price's views. He goes on to illustrate them by other suppositions,

tions, which, as his method of arguing is the same, it is unnecessary to recapitulate. His work is written in a very intemperate style, and contains, among others, the following assertions :

1st, That no benefit is derived from applying a fund in the second of the abovementioned ways, rather than the first. In both cases, the taxes are continued during the operation of the fund, and the national burthens are the same. The difference in favour of the former, already stated, is *gained without any kind of loss or expense*. By following the latter, we subject the nation to a loss of 208 millions, from a circumstance absolutely frivolous.

2d, War would increase the efficacy of the sinking fund ; and any suspension of it then would be the *madness of giving it a mortal blow*, at the very time it was making the quickest progress.

3d, A state may, without difficulty, redeem its debts, by borrowing money at an equal, or even a higher interest than the funds bear, and without providing any other funds than such small ones as are necessary to pay the interest of the sums borrowed. In private life, such a measure would be justly deemed absurd. But, in a state, it would be the effect of the soundest policy. It is borrowing money at simple interest, in order to improve it at compound interest.

4th. The sinking fund proposed would render it of little or no consequence what interest a na-

tion paid for its loans. Reduction of interest has not been attended with the advantages commonly imagined, and, as hitherto managed, has only been an expedient to postpone public bankruptcy, by lessening the possibility of avoiding it.

The arguments already adduced in support of our twelfth general proposition, are perhaps sufficient to point out the judgment which ought to be formed of this plan, and of these assertions. For several reasons, however, they demand a more particular discussion.

1st, The excellent character and high reputation of the author. A pious divine,—a respectable scholar,—an expert calculator, a virtuous man, and an upright patriot.\*

2d, The effects which his plan has produced upon our system of national finance. It has not shared the common fate of the projects of private individuals, and vanished in neglect and oblivion. It is the basis of Mr. Pitt's sinking fund, adopted fifteen years after its first publication, and now followed out for upwards of 30 years; and although with some deviations, yet, on the whole, with a steadiness seldom experienced in public measures for so great a length of time, and under a succession of different administrations.

It

\* We respect highly the integrity of the man, and believe that, in all his writings, he was actuated by the purest motives for the public welfare; but we do not mean to insinuate any opinion in regard to his principles of civil liberty.

It will be proper, before proceeding, to state distinctly the points in which all agree, and the points at issue.

It is universally admitted, that every productive additional taxation tends to prevent the progress of the national debt, if it be in a state of accumulation ; and to accelerate its discharge, if it be in a state of redemption.

That every increase of expenditure, whether arising from necessity or profusion, tends to increase its accumulation, or retard its discharge.

That any sum of money, however small, improved by compound interest, will amount, in length of time, to an indefinite magnitude ; and therefore,

That any surplus of national revenue above national expenditure, will be sufficient, if it continue for a long time, and be faithfully applied, to discharge any national debt, however great.

The doctrine maintained by Dr. Price is, that the formation and inviolable appropriation of a sinking fund, operating by compound interest, *in war as well as in peace*, is a measure of the utmost consequence, and that the effects of this system are greatly superior to those of any other application of a surplus, *the expenditure and taxation being equal*. That this is his opinion, appears from the passages above quoted, and many others to the same purpose. His work means this, or it means nothing : for it was never called in question,

tion, that saving of expenditure, or increase of taxation, have a powerful effect on the state of national finance.

In opposition to Dr. Price's doctrine, it is maintained, that the separation of a sinking fund from the general revenue, is a measure of no efficacy whatever; that the first and second methods of applying a surplus abovementioned, are merely different modes of official arrangement, leading to the same result;—that in time of war, when the expenditure exceeds the revenue, the preservation of the sinking fund, and consequent increase of loans, is a system from which no advantage can arise;—if it could be conducted without expense, it would be nugatory; as it is necessarily attended with expense, it is pernicious;—that at the conclusion of a war, any surplus revenue applied for the discharge of debt during the subsequent peace, operates by compound interest, during the continuance of peace: But the notion of uniting that period to another period of peace, or to a still longer period of alternate war and peace, in order to obtain the powerful effect of compound interest acting for a great length of time, is illusory.

We return to the case supposed by Dr. Price, abovementioned, and compare the effects of the first and second methods of applying the surplus, either in time of peace or war.

In time of peace, when the second method is followed,

followed, L.10,000, being the interest of the debt discharged the first year, is applied to the current services of the second year ; L.20,000, the third year ; and these sums are supposed requisite to compleat what the service of each year requires ; and, as Dr. Price observes, they must have been borrowed, if the first method had been followed. If loans be made for this purpose, either taxes must be imposed for the payment of the interest, or the sums borrowed accumulate by compound interest. In the former case, the nation is subjected to the burthen of taxes for payment of the interest of L.10,000 the first year ; of L.20,000 more, or L.30,000 altogether, the second year ; and of L.36,550,000 the eighty-sixth year ; none of which would have been imposed according to the second method. It is this gradually increasing, and ultimately large additional taxation, that occasions the difference of L.208,250,000 stated by Dr. Price, as the loss arising from the second method. If the same taxes be imposed when the second method is followed, their produce is not wanted for the services of the year, and must accumulate, at the end of the period, to the above-mentioned sum in favour of the public.

If taxes be not imposed to pay the interest of these loans, then to the L.20,000 borrowed the second year, there must be added a sum sufficient to pay the interest of the loan of the former year ; and, in like manner, a sum must be borrowed each succeeding

succeeding year, equal to the interest of all the former loans, by which means the amount of these loans would accumulate by compound interest against the public.

The disengaged annuities under the second method, may be dissipated by profusion, and then there will be a difference between the methods equal to what Dr. Price states ; but it is the profusion, and not the mode of application, that is the cause of that difference. They may be applied to the construction of canals, harbours, and other objects of national utility ; and the benefits accruing from these to the public, may repay the expense of their execution, or otherwise ; but the propriety of this mode of application of surplus revenue, does not belong to our present inquiry.

In war, let us adopt Dr. Price's supposition of three millions being required annually in addition to the sums raised within the year, and of continuing the application of L.200,000 as a sinking fund ; which sum is comprehended in the loan of three millions. The debt contracted in three years, is nine millions ; and the additional taxes for payment of interest at five per cent. come to L.450,000. The national debt redeemed by a sinking fund of L.200,000, operating by compound interest in three years, is L.630,500, and therefore the additional unredeemed debt is L.8,369,500.

If no sinking fund be continued during the  
war,

war, a loan of L.2,800,000 only will be required the first year, the interest of which is L.140,000. But the taxes imposed that year amount to L.150,000, (for we suppose the extent of taxation in both methods equal,) therefore there is a surplus of L.10,000 applicable to the service of the second year. The loan required for the second year will therefore be L.2,790,000; the two loans together, L.5,590,000; and the interest upon them L.279,500. The additional taxes imposed the two first years amount to L.300,000, leaving a surplus of L.20,500 applicable to the service of the third year. The loan required the third, is therefore L.2,779,500, and the amount of the three loans L.8,369,500, exactly the same as the unredeemed debt when a sinking fund is continued; and it is obvious the same equality will hold for any number of years.

When Dr. Price says that a debt of 258 millions might be discharged in eighty-six years, at no greater expense than an annual saving of L.200,000, he overlooks the taxes imposed year after year, for the payment of interest; a great part of which would not have been needed, if that annual sum had not been separated from the public revenue. The reasoning used above is equally applicable to any other supposition of war expenditure, whatever be the annual deficiency, whether uniform or varying,—whether continued for three, or thirty, or an hundred years, still the

B b

taxation

taxation and expenditure of each year being the same, the finances of the nation will be found in the same condition at the end of the period, whether the sinking fund be preserved inviolate, or entirely laid aside.

If no sinking fund be kept up for thirty years, a little alteration on the arrangement of public accounts would bring them exactly to the same state as if it had been uniformly adhered to ; and conversely, the present form of our financial accounts, arising from a sinking fund, may be brought, by a like alteration of arrangement, to the form in which they would have stood, if no sinking fund had ever been thought of. It is impossible that a mere change of order in the public accounts, capable of being reversed at any time, can be attended with advantage to the public.

At the termination of a war, the nation remains charged with a certain debt, and it possesses, or ought to possess, a certain surplus revenue. The efficacy of this surplus to discharge the debt, depends upon its proportion to the debt, and the length of time during which it is applied to that purpose, and upon these alone. It operates by compound interest. But the manner in which the debt was contracted, or the surplus obtained, has no relation to the progress and period of its discharge. It is of no avail that a sinking fund  
had

had been operating by compound interest during a former peace. When war breaks out again, the operation of compound interest is at an end. In place of continuing to discharge debt, an additional debt is contracted. When peace returns, the operation of discharge re-commences from a new basis, according to the state of finance at the time. The public debt is certainly increased ;— the proportion of surplus revenue to that debt, and therefore the time requisite for its complete discharge, may be greater or less than at the former peace ; but the two periods of peace cannot be united to obtain a powerful effect from the long continuance of compound interest.

The Doctor's plan for discharging the national debt by borrowing money at simple interest, in order to improve it at compound interest, is, we apprehend, completely delusive. He admits the absurdity of such a measure in private life,—and its absurdity in national finance is exactly the same. The cases differ only in extent of sum, and duration of time, which no ways alter the general tendency of the measure. Suppose a million borrowed for this purpose, and assigned to Commissioners for the redemption of the national debt, in whose hands it operates by compound interest. The interest of this loan is L.50,000, which must either be provided for by some additional tax, or saved by some measure of public economy ; or if neither of these be adopted,

ed, an additional loan must be made next year to pay the interest. In the former case, it is the tax or the economy, and not the operation described, that benefits the revenue; and they would have produced the same effect by affording an additional surplus improved at compound interest, without any loan. In the latter case, an additional sum of L.50,000 is borrowed the second year; and a sum equal to the interest of both loans, or L.102,500, the third year; and thus the debt accumulates by compound interest against the public, exactly to the same extent that the money vested in the hands of the Commissioners accumulates in its favour.

Dr. Price's assertion, that it is of little consequence what interest a nation paid for its loans, is untenable. In time of war, additional interest must be met by additional taxes, or accumulate by compound interest against the public. In time of peace, reduction of interest produces or increases a surplus, upon the application of which the redemption of national debt entirely depends.

The Doctor remarks, that a debt bearing a high rate of interest, with a sinking fund attached, is redeemed in less time than the same debt with the same sinking fund at a low rate of interest; and he considers this circumstance as a recompense for the burthen of the high interest. He overlooks that, as a much larger sum is annually raised from the public when the interest is high, a great  
part

part of this additional burthen being paid to the national creditors, is entirely lost to the public; and a part only being added to the sinking fund as the redemption of the debt advances, accelerates the course of its discharge. A debt of ten millions, bearing interest at six per cent. is redeemed by a sinking fund of L.100,000, in about  $33\frac{1}{2}$  years. If the rate of interest be only three per cent. it will require 47 years. But in the former case, the annual burthen on the public is L.700,000, and the whole burthen L.23,450,000; and in the latter case, the annual burthen is L.400,000, and the whole burthen L.18,800,000. If the sum of L.700,000 had been raised annually while the debt bore interest at three per cent. it would have been discharged in 19 years for L.13,300,000. Or if L.477,000 had been raised annually, it would have been discharged in  $33\frac{1}{2}$  years, for L.15,979,500.

Dr. Price supposes the case of a state burthened with debt, bearing five millions of interest, and able, by its utmost exertions; to raise a million more as a sinking fund. "This, if the debts bear interest at 6 per cent. will pay off three-fifths of them in twenty-three years, and the state may be saved; but if the interest be no more than 3 per cent. it will not give the same relief in less than double that time, and a public bankruptcy may prove unavoidable."\* He does not mention that,

\* Observations on Reversionary Annuities, 4th edit. vol. i. p. 189.

that, in the former case, the debt supposed to exist, and to be partially discharged, is L.83,333,333, and in the latter case, L.166,666,666. The same national exigencies must have required the contraction of an equal debt. What he proves is only that a debt of half the amount, but bearing interest at a double rate, will be discharged in less time by the same sinking fund.

Dr. Price, in comparing the different ways of applying the disengaged annuities, says, that if they be not applied the first way, they might, for ought he knows, be best employed in the last way, that is, in the abolition of taxes; for a kingdom will then be sure of receiving some relief. We have endeavoured to evince that the first and second methods are the same in substance, and differ only in form. We esteem them greatly superior to the third. It is by continuing the taxes, and thus supporting the surplus during a period of peace, that any thing effectual can be done for discharging the national debt.

Dr. Price communicated to Mr. Pitt, in 1786, three plans for the redemption of the national debt.\*

One of these, No. III. is the application of a million surplus, exactly the same as was adopted in the sinking fund established that year, which will be examined in the following chapter.

Another

\* Morgan's Review of Dr. Price's writings on the Finances of Great Britain.

Another, No. II. proposed that the sinking fund should be raised from a million to L.1,600,000, by additional taxes imposed at the following periods.

First year,	-	-	L.60,000.
Second year,	-	-	180,000
Third year,	-	-	120,000
Fourth year,	-	-	120,000
Fifth year,	-	-	120,000
			<hr/>
			L.600,000

This plan is more efficacious than the former, as the sum appropriated is greater ; but of the same general tendency.

In the other plan, No. I. it is proposed to impose the same additional taxes, but apply their produce as follows :—A part of the three per cent. stocks to be converted into four per cents., and the additional interest to be paid by these taxes. The holders of the three per cent. stock converted to advance an adequate sum for the increase of interest, and this sum to be applied in addition to the million for the redemption of the national debt.

We entirely agree with Dr. Price in the disadvantage of borrowing at a low rate of interest, with an increase of nominal capital ; and the last mentioned plan, so far as it tends to counteract that system, appears beneficial.

The

The Doctor, in a subsequent publication,\* presuming that the sinking fund would strengthen the public credit, and raise the three per cents. considerably above par in intervals of peace, lays down a plan, founded upon that supposition, for reducing the national debt. Instead of a reduction of interest, which, he says, would retard the extinction of the public debt, he proposes a reduction of capital; and, supposing the three per cents. at 110, he assumes, that the public creditors would agree to have their capital reduced from L.100 to L.80, if secured of the present interest for fifteen years. At the end of that period, the reduced capital, bearing interest at  $3\frac{1}{4}$  per cent. would sell much above par, and a similar operation might be repeated upon terms still more advantageous, and by this scheme, the operation of compound interest itself would be aided.

Admitting the price of stocks, and consent of the creditors, as supposed, this appears to us one of the best parts of the Doctor's plans. The methods he proposes to improve the surplus value of the stock for the public emolument, is, perhaps, the most effective that could be taken.

The advantages expected by Dr. Price and his friend, Mr. Morgan, from the execution of his plans, depend in a considerable degree upon the

con-

\* Preface to the third edition of *Observations on Reversionary Annuities*, p. 13, &c. This article is omitted in the following edition.

confidence which they suppose these measures would give in government security, and the rise of the price of stocks which that confidence would produce. All this is so hypothetical as to render a more minute examination of these plans, so far as they rest upon that expectation, unnecessary.

Much has been said by Dr. Price and others, of the advantage which a sinking fund produces in supporting the price of stock. We apprehend it is incapable of producing any such effect. The price of stock, like that of any commodity, depends on the proportion of supply and demand. Whatever sums are brought into the money market, and applied by the Commissioners for the purchase of stock; equal sums are withdrawn from the money market, by the additional loans required to replace what is invested in the hands of the Commissioners. Dr. Price justly observes,\* that whatever effect borrowing every year has in sinking the funds, paying every year would have an equal contrary effect. He has not attended to the obvious consequence, that, if the payment be made by means of borrowing, it can produce no alteration in the price of the funds at all. He supposes ten millions borrowed every year to defray the expenses of war, nine millions only of

c c

which

\* Preface to third edition of *Observations on Reversionary Annuities*, page 13.

which would have been wanted had not the surplus million been locked up; and further, that this scheme, by keeping up public credit, and throwing money every year into the hands of the lenders, enables Government to borrow at four instead of five per cent. and thereby save L.50,000 of interest. He overlooks that the effect of throwing a million into the hands of the lenders, is compensated by demanding from them an additional million in the loan.

The purchases made by the Commissioners, no doubt, support the funds at a higher rate than they would stand, if there were no such purchasers in the field, and the loan for the year the same; and this advance takes place at a time when a high price is disadvantageous to the public: But the additional loan which the sinking fund requires, must have as great an effect in depressing the funds, and that depression takes place at a time when a low price is disadvantageous to the public.

## CHAPTER II.

### *Examination of Mr. Pitt's Sinking Funds.*

THE system of finance recommended by Dr. Price, is the same as that carried into execution under the administration of Mr. Pitt, and continued since. In the former chapter, we considered its merit and tendency on general principles. In this, we are to consider the effects it has actually produced.

The result of the foregoing reasoning is, that a sinking fund connected with an increasing debt, providing the loans be obtained on the same terms the debts were redeemed, and the additional operations conducted without expense, is attended with no consequence, good or evil. But in every loan, the contractors have a profit at the expense of the public: and when the system of a sinking fund is followed, the public, besides expense, sustains a loss equal to the *bonus* attending the additional loans.

It is of importance to ascertain whether the nation has sustained a loss of this kind, and to what extent. If the fact be ascertained, it corroborates the foregoing reasoning; if it be considerable, it leads us to enquire for what reason the system is persevered in.

The whole sum raised by loans, from 1793,  
 (when the first loan was made after the establish-  
 ment of the sinking fund) to 1st February 1817,  
 after deducting the part of the loyalty loan re-  
 paid, is - - - L.420,307,425  
 Exchequer and navy bills funded, 89,148,773

---

Amount loans and bills funded, L.509,456,198

---

And the capitals funded for these were,

In the 3 per cents.	-	-	L.605,495,840
In the 4 per cents.	-	-	44,027,744
In the 5 per cents.	-	-	116,013,861

---

L.765,537,445

And long annuities have been granted, at a me-  
 dium for  $58\frac{1}{2}$  years, - - - L.525,111

Now these may be reduced to 3 per cents. by  
 allowing a capital in proportion to the rate of in-  
 terest, which is the natural value, and, although  
 there be some fluctuation in the market price,  
 comes near enough to the actual value.

Sum funded in 3 per cents. - L.605,495,840

Value of L.44,027,744 in 4 per cents. 58,703,658  
 of 116,013,861 in 5 per cents. 193,956,435

---

Carried forward, - L.857,555,933

Value

Brought forward,	-	L.857,555,933
Value of L.525,111 annuities for 58½		
years, at 18.86 years purchase,		
L.9,903,593, in 5 per cents. and		
in 3 per cents.	-	16,505,988

Whole value of funded capital and  
annuities, reduced to 3 per cents. L.874,061,921

The sums expended by the Commissioners for  
the reduction of the national debt, and capital  
redeemed, are as follows.

<i>Sums expended. Capital redeemed.</i>		
3 per cents.	-	L.176,652,174 L.283,777,272
Of which redeemed		
before 1793,	-	8,147,630 10,242,100
		<hr/>
		L.168,504,544 L.273,535,172
4 per cents.	-	6,586,934 7,796,400
5 per cents.	-	130,113 145,500

Amount redeemed,  
from 1st Feb. 1793,  
to 1st Feb. 1817, L.175,221,593 L.281,477,072

And the capital redeemed, reduced to 3 per  
cents., is

L.273,535,172,	3 per cents.	L.273,535,172
7,796,400,	4 per cents.	10,395,200
145,500,	5 per cents.	242,500

---

L.284,172,872

During

During the continuance of the war, the national debt increased annually; the sums borrowed, by loans or otherwise, exceeding the debt redeemed. Now, if no system for redeeming the national debt had been adopted, the amount of taxes and expenses remaining the same, the requisite money raised by loans or funded bills would have been less by the last mentioned sum made over to, and expended by, the Commissioners.

Now, as L.509,456,198 (the sum raised) is to L.874,061,921, (the capital required to be funded in the 3 per cents. in order to raise that sum) so is L.175,221,593 (the sum delivered to, and expended by, the Commissioners for the reduction of the national debt, and which might have been deducted from the loans, if no such commission had existed,) to L.300,623,533, the sum which would have been saved from the funded capital, (3 per cents.) by lessening the loans.

Debts contracted from 1793 to 1817, reduced to  
3 per cents. - - - L.874,061,921

If no sinking fund had existed, it  
would have been less by - - - 300,623,533

And would have amounted only to L.573,438,388

From above sum of L.874,061,921

Deduct debt redeemed 284,172,872

Unredeemed debt, - - - L.589,889,049

Loss to the public by sinking fund,\* L.16,450,661

But

\* See Note XXVIII.

But the present excess of national debt occasioned by the sinking fund is much higher. A portion of this loss has occurred each year for a period of twenty-four years ; and the whole effect ought to be estimated by accumulated computation of interest. If the last mentioned sum be equally divided, the annual loss is L.685,444, and this, in twenty-four years, at compound interest, amounts to about 30 millions. Something, however, may be deducted from this statement, because the loss was not equally diffused through the period ; the portions appertaining to the early part being considerably smaller.

Neither has any thing been charged for the expense of the commission for the redemption of the public debt. This branch of public expense, indeed, has been very moderate ; but its amount, with compound interest, ought to be added to the other loss, in order to ascertain the whole.

We are next to examine that part of Mr. Pitt's plan which attaches a sinking fund of one per cent. to the nominal capital of every loan, imposing taxes to that extent beyond what are required for the payment of the interest. This plan was also suggested by Dr. Price ;\* whose proposal, however, was one per cent. on the sum borrowed, and not on the capital funded.

There is an inequality in the extent of this fund  
from

\* Appeal to the Public, p. 40, 41.

from its being applied to the nominal capital. If the loan be made in the 3 per cents. valued at 60, it amounts to 1-60th of the sum borrowed. If it be made in the 5 per cents. valued at par, it amounts to 1-100th.

Like the other parts of the plan, it occasions a loss to the public by borrowing upon higher terms, in order to redeem a part of the debt upon lower ones. It is equally destitute of all real efficacy for the discharge of debt, under equal circumstances of taxation and expenditure.

The ultimate effects of adherence to this system, during a long period of continued warfare, remains to be ascertained. Suppose the annual deficiency to be supplied by loan is 11 millions: this funded in the 3 per cents. creates a capital of L.18,333,333, the interest of which is L.550,000, and the sinking fund, L.183,333; for both which additional taxes are imposed.

It is obvious that if no more taxes be imposed than are required to pay the interest, the annual deficiency of 11 millions remains the same. A loan to that extent must be made annually, and taxes imposed for the payment of the interest; and our debt, interest, and taxes, increase annually, by equal sums, without the most distant prospect of relief.

But if taxes be imposed to a greater amount than the interest of the loan, the surplus fills up some part of the deficiency. On the foregoing  
sup-

supposition, L.183,333 is deducted from the 11 millions, leaving a deficiency of L.10,816,666, and if an equal amount of taxes be imposed the second and each succeeding year, the part of the deficiency supplied will increase by compound interest; and in a course of years, the whole 11 millions will be supplied, and no further loans or additional taxes will be needed, provided the expenditure remain the same as at the beginning of the period.

Now, as an annuity of L.1, at five per cent. compound interest, amounts to L.60 in about twenty-nine years, that length of time is required before the deficiency of 11 millions be supplied. During that time, L.783,333 of additional taxes are imposed annually, or L.21,266,666 altogether. The result is, that if the nation, which cannot at present raise 11 millions more, to equalize its taxes to its expenditure, shall increase them gradually for twenty-nine years, till the addition amount to 21 millions, the point of equalization will be obtained; or, to use the language of the sinking fund, the debt annually redeemed, will then become equal to the debt contracted.

If the loan of 11 millions be made in a five per cent. fund, the sinking fund is L.110,000, which, added to the interest, gives an annual charge of L.660,000. Upon this supposition, thirty-seven years are required before the deficiency is supplied; and the additional taxes imposed, amount to L.24,420,000.

A sinking fund of this kind is preferable in ultimate efficacy to one founded on the appropriation and accumulation of a fixed annual sum. It increases with the increase of the funded debt; and, in a long time, will be equal to the discharge of any debt, however great, provided the nation bear the taxes which it requires. An annual sum, esteemed large at first, is likely to become inadequate to the discharge of a debt which increases beyond expectation. A sinking fund of L.1,200,000 would require forty-seven years and a half to fill up a deficiency of 11 millions; and the additional taxes imposed, would amount to above 28 millions.

We have stated the case of continued warfare, as being more simple in calculation. In the case of alternate war and peace, the periods would be different, but the relative merits of the different systems the same.

But the chief point to be attended to is, that none of these plans, nor any possible plan, has any intrinsic power to discharge, or aid the discharge of our national burthens. An opinion prevails that the minister who instituted the sinking fund has put a powerful machine in action, which, although its first operations were feeble, has now become of great efficacy, and that the efficacy will continue to increase without any further exertion on our part, like the acceleration of falling bodies by the power of gravity, till it amount to an indefinite magnitude.

When

When a minister establishes a sinking fund connected with a system of borrowing, he acknowledges the inability of the nation to bear at present the expense which his system of administration requires; and his plan, whatever it be, does no more than inform the public, that if posterity be able and willing to raise such sums, by extended taxation, at certain periods which his plan points out, as will make up for our deficiencies, with interest, and furnish besides what is wanted for the exigencies and contests of their own time, the public debt which he contracts will then be discharged.

That minister would have reason to doubt whether posterity would submit to all this. Yet, the plan of our sinking fund established in 1786 and 1792, have been adhered to with great steadiness, and our taxes raised to an amount beyond precedent or expectation.

The sums annually raised by taxes, since the commencement of the war, are as follows :\*

Year ending 5th January.

1793	L.17,656,418	1801	L.33,896,464
1794	17,170,400	1802	35,415,096
1795	17,308,811	1803	37,240,213
1796	17,858,454	1804	37,677,063
1797	18,737,760	1805	45,359,442
1798	20,654,650	1806	49,659,281
1799	30,202,915	1807	53,304,254
1800	35,229,968	1808	58,390,255

D d 2

1809

\* See Note XXIX.

1809	L.61,538,207	1814	L.66,925,835
1810	63,405,294	1815	69,684,192
1811	66,681,366	1816	70,421,788
1812	64,763,870	1817	59,437,259
1813	63,169,845		

From this statement, it appears that the amount of our taxes, which was nearly stationary for some years after the commencement of the war, has increased progressively, (with one or two slight exceptions) since the year 1795; that the increase was most rapid some years after the recommencement of the war, when heavy war taxes were imposed, and that the amount of taxes at the end of the war was about four times what it was at the commencement.

The whole amount of taxes, upon the average of the last three years of war, after deduction, was about 69 millions; a sum more than sufficient to defray the expense of the war, enormous as it was; but not sufficient to provide at the time for the interest of debt formerly contracted.

Our present national revenue would therefore have been sufficient to support, without limitation of time, the expense of the late war on the scale it was conducted, if the taxation during former wars, and the early period of the present one, had been equal to the expenditure.

The cause of this is, not that certain sinking funds were established twenty or thirty years ago, but that we submitted to a taxation of 69 millions,

lions, and to the privations occasioned thereby. The same amount of taxation would have produced the same effect, although none of these funds had ever been established.

Convinced that the sinking fund has contributed nothing to the discharge of the public debt, and that it has occasioned a large addition to our public burthens, we next enquire, whether any and what advantages have been derived from it.

The means, and the only means, of restraining the progress of national debt, are, saving of expenditure, and increase of revenue. Neither of these have a necessary connection with a sinking fund. But if they have an eventual connection; and if the nation, impressed with a conviction of the importance of a system established by a popular minister, has, in order to adhere to it, adopted measures, either of frugality in expenditure, or exertion in raising taxes, which it would not otherwise have done, the sinking fund ought not to be considered as inefficient; and its effects may be of great importance.

We are not of opinion that the sinking fund has contributed in any degree to frugality in expenditure. The time during which it has operated, has not been a time of national frugality. Ministers have had the full power of raising what loans they pleased, to supply the means of any expenditure, however lavish; and it will not be  
said

said they have used this power with a sparing hand.

In regard to increase of taxes, we are of opinion, that the sinking fund has had a real effect in calling forth exertions, which, although they might have been made as well and as effectually, would not have been made, unless to follow out the line which that system required. A loan is made, and the revenue is considered as charged, not only with the interest, but a certain proportion of the capital, annually. Taxes are imposed to meet the one as well as the other. If the sinking fund had not been in view, it is likely taxes would have been imposed for the interest only.

If the sinking fund could be conducted without loss to the public, it would not be wise to propose an alteration of a system which has gained the confidence of the public, and which points out a rule of taxation that has the advantage at least of being steady. If that rule be laid aside, our measures of taxation might become entirely loose.

But if the sinking fund be attended with a heavy loss, it seems proper to inquire whether a plan might be followed that would deliver us from this loss, and at the same time carry on the necessary measure of increased taxation. The present proportion of one per cent. on the nominal capital might be continued. If a loan of twenty millions be transacted in the 3 per cents. valued at

60, the sinking fund attached to it on the present system is L.333,333. Now taxes may be imposed to that extent, besides what are required for interest ; and that sum, instead of being made over to Commissioners, may be deducted from the loan. Thus the nation would save the loss it at present sustains, of borrowing on lower, and paying on higher terms ; and the imposition of L.333,333 additional taxes, which is the only measure of real efficacy, would be the same as before.\*

\* See Note XXX.

### CHAPTER III.

#### *Examination of Lord Henry Petty's Plan of Finance.*

WE have already given an account of Lord Henry Petty's plan of finance. It was proposed to Parliament and the public, in the year 1807, accompanied with an elaborate set of tables. Being very complex, it was not generally understood. As it promised to raise the necessary loans with little or no increase of taxes, it was favourably received, and probably would have been continued for some years, if the ministry who brought it forward had remained in office.

The scheme, as proposed, though sufficiently complex in itself, is blended with many circumstances extraneous to its general merit. Advantage is taken of the falling in of annuities at different periods, by the expiry of their term, and of the reduction of the rate of management, and of an expected surplus from the present sinking fund. The savings by annuities and management, must give the same relief to the national annual burthens, under any system of finance; and if it be a beneficial measure to call in the aid of the surplus of the present sinking fund, when it attains a certain magnitude, the advantage resulting

sulting from it will be same, with whatever other measures it be connected. The proper way to judge of the new scheme, is to lay these extraneous circumstances aside; to leave the old debt to combat with the sinking funds already provided for its redemption, aided by any other means which existing circumstances supply; and to consider the operation of the new scheme, in regard to the new debt, contracted during the time it is in force, compared with the effects of the continuance of the former system. This will render our view of the subject simpler; and if the new scheme will not bear the test of examination when applied in this manner, it will not bear it at all.

The first point which presents itself to our view, is, that the sums proposed to be raised by new taxes, during the first years of the scheme, are much less than the interest of the debts contracted; and therefore money must be borrowed, not only to supply the excess of the war expenditure above the sum raised within the year, but also to pay the interest of a great part of the loan, and thus subject the nation to the heavy and increasing expense of compound interest.

The sums borrowed the first year were,

On war taxes,	-	-	L.12,000,000
By supplementary loan,	-	-	200,000
<hr/>			
Carried forward,	-	-	L.12,200,000
E e			But

Brought forward,	-	L.12,200,000
But there was applied to the re-		
demption of the war tax loan,		
from the mortgaged taxes,	-	600,000

---

Nett loan, deducting part redeemed,	L.11,600,000
The sum required to compleat the	
expenditure is	- 11,000,000

---

And the remainder, applied to pay  
the interest of the war loan, is - L.600,000

The only additional taxes imposed, are L.10,000  
for interest of the supplementary loan, and L.3,333  
for a sinking fund on the same; and as the for-  
mer of these is appropriated, the latter only is to  
be stated against the interest of L.11,400,000,  
added to the funded debt, exclusive of the sup-  
plementary loan, of which additional debt, only  
11 millions were applied to the public service.

In the second year, the sums proposed to be  
borrowed were,

On war taxes,	-	L.12,000,000
By supplementary loan,	-	1,400,000

---

L.13,400,000

Of which applied to the redemption	
of war tax loans, by taxes mort-	
gaged this and former year,	- 1,200,000

---

Nett loan, deducting part redeemed,	L.12,200,000
Carried forward.	

Sum

Brought forward,	-	L.12,200,000
Sum required for expenditure,		11,000,000

Remainder applied to pay the in- terest of the war loans for two years,	-	-	-	L.1,200,000
---	---	---	---	-------------

Against which there is to be stated, Sinking fund of supplementary loan of first year, with interest,	-			L.3,500
Sinking fund of supplementary loan, se- cond year,	-	-	-	23,333
Interest of war tax loan redeemed first year,	-	-	-	30,000
				<u>L.56,833</u>

Leaving an additional interest, for which no taxes  
are laid on, of L.1,143,667.

If we trace the proposed operations of this scheme further, we will find that the same pernicious mode of borrowing, for payment of the interest as well as the principal, continues for a course of years, though at a rate gradually diminishing, because the interest on the loans annually raised on the credit of the war taxes, for which no new provision is made, becomes less, owing to the redemption of part of that debt; and the interest on the supplementary loans, for which, together with a sinking fund, provision is made, increases, together with these loans themselves.

In order to shew what the progress and effects of this system, if continued, would have been in a period of twenty years, unincumbered with extraneous matter, Table VIII. is inserted in the Appendix, divided into several parts.

Part I. relates to the loans on the war taxes ; Part II. relates to the supplementary loans ; and Part III. exhibits a general view of the effects of both loans combined.

The debts contracted and redeemed, inserted in this table, are according to their real value. If invested in a three per cent. fund, as was proposed, the nominal sum will be greater, (supposing the 3 per cents. at 60,) in the proportion of five to three.

By comparing the two last columns of Part III. it will appear how far the sums raised annually by taxes imposed since the commencement of the scheme, would fall short of the interest on additional debt contracted, for which taxes ought to have been provided. At the commencement, the difference is very great ; and although they come near to an equality towards the end of the period, yet, taking in the whole, the difference is great. The necessary effect of this deficiency of taxation, is to subject the public to the loss incurred by compound interest.

Part IV. is added to assist us in forming a judgment of the effects of this system compared with others. It exhibits the amount of debt existing

isting, and taxes paid, each year, for twenty years: first, upon the supposition of no sinking fund being established, and taxes imposed annually for the payment of the interest of the loans only; secondly upon the supposition of a sinking fund of 1-100th of the sum borrowed; thirdly, of a sinking fund of 1-60th of the same. The first of these was the old system; and, though not a good one, may be taken as a standard of comparison, whereby to judge of the merit of the others; the second is, the present system, when the loan is made in a five per cent. fund at par; and the third, when it is made in a three per cent. fund at 60.

It appears from this Table, that, at the end of fourteen years, the period at which the whole war taxes are mortgaged, the amount of unredeemed debt, by Lord Henry Petty's system, is L.202,784,803, and the amount of taxes paid during these fourteen years, is L.28,413,933. When no sinking fund is established, the amount of existing debt at the same period is L.154,000,000, and the taxes paid, L.57,750,000. The additional debt contracted by the former, is L.48,784,803, and the saving in taxes, L.29,336,667. The excess of the additional debt above the saving in taxes, is L.19,448,136. At the end of twenty years, the amount of unredeemed debt, by Lord Henry Petty's system, is L.285,519,205, and the amount of taxes paid during these twenty years,

is

is L.92,893,333. The amount of debt on the old system is 220 millions, and of taxes, 115 millions. The additional debt contracted by the former, is L.65,519,205 ; and the saving in taxes, L.22,106,667 ; the excess of additional debt above the saving in taxes, L.43,412,538.

In the system where a sinking fund of 1-100th is established, the unredeemed debt at the end of fourteen years, is L.139,527,162 ; and the amount of taxes, L.69,300,000. The debt is less by L.14,472,838 than according to the old system ; and to obtain this saving, there is paid, in additional taxes, L.11,550,000. The debt saved exceeds the additional taxes by L.2,922,838. At the end of twenty years, the unredeemed debt is L.187,617,650 ; the taxes, L.138,600,000. The saving in debt is L.32,382,350 ; the additional taxes, L.23,600,000. The excess in the saving of debt above the additional taxes, L.8,782,350.

In the system where a sinking fund of 1-60th is established, the unredeemed debt at the end of fourteen years, is L.129,878,604, and the amount of taxes, L.77,000,000. The debt is less by L.24,121,396, than according to the old system, and the additional taxes amount to L.19,250,000, and the debt saved exceeds the additional taxes by L.4,871,396. At the end of twenty years, the unredeemed debt is L.166,029,417, and the amount of taxes, L.154,000,000. The saving in debt is L.53,970,583 ; the additional taxes,  
L.39,000,000 ;

L.39,000,000 ; and the debt saved exceeds the additional taxes by L.14,970,583.

Thus it appears that Lord Henry Petty's system is by far the worst, and in twenty years brings on an addition of funded debt, (five per cents.) besides what is applied to the public service, of - - - L.65,519,203

By the old system, the debt contracted is equal to the sums applied to the public service.

By the system of a sinking fund of 1-100th, the debt contracted is less than the sums applied to the public service, by - - - 32,382,350

By the system of a sinking fund of 1-60th, the debt contracted is less than the sums applied to the public service, by - - - 53,970,583

The general result might have been known without calculation. In Lord Henry Petty's system, taxes are only imposed for a part of the interest of the loan, and, in the first years, only for a small part ; and the interest, not provided for, must accumulate in the manner of compound interest, to augment the capital debt. In the system where a sinking fund of 1-100th is established, a part of the loan is annually paid, and its interest of course cancelled ; and as taxes were imposed for the full interest, the part thus saved,

saved, operates in depressing the capital debt : and this effect takes place in a higher degree when a sinking fund of 1-60th is established.

In comparing the merit of different systems, the only points necessary to be attended to are, the amount of the loans contracted,—the part of these loans redeemed,—the interest incurred,—and the sums raised by taxes. The arrangement of the loans under different branches, and the appropriation of particular funds for payment of their respective interests, are matters of official regulation ; and the state of the public finance is neither the better nor the worse whether they be conducted one way or other. A complicated system may perplex and mislead, but it can never ameliorate.

It is frivolous to maintain that a part of the public debt is charged on the war taxes, and, being in a course of discharge, ought to be separated from the remainder, in forming an estimate of the whole. That part, as much as any other, is a burthen on the nation. It must be discharged, if ever it be so, by taxes levied in future on the nation ; and until it be paid, its interest must be provided for by such taxes ; otherwise compound interest accumulates against the public. It is of no consequence whether these taxes be of the kind originally imposed under the name of war taxes, and afterwards rendered permanent, at least for a period, by such appropriation ; or new taxes

taxes of a different kind, imposed when the war taxes are discontinued.\*

As well might a land steward, when required by his employer to lay before him a state of his rents and debts, reply, that it was unnecessary to bring the whole into view at once; that he had allocated a part of the rents of such a manor for the gradual discharge of a certain bonded debt, and those of another manor for the discharge of another bond; that, if the remaining rents, after these defalcations, were insufficient to support his lordship's expenses, he could easily borrow what money might be wanted; and if a growing deficiency should be the result of these operations, it might perhaps be made up at some future time, when the present leases on the estate expired, and the rents might rise.

We have heard it maintained, that a system may be so constructed, that, although it does harm in the first years of its operation, the result, after a long continuance, will be beneficial. From its effects after a few years, we may judge with certainty of its ultimate tendency. Suppose, after a trial of ten years, it has rendered the state of our national finance so many millions worse than it would have been under a different system; but after that period it takes a beneficial turn. Were this possible, it would be better to follow the measures of that other system for these ten

f f

years,

years, and then commence, upon a better basis, the measures of the former. But the supposition of a change of tendency is absurd. If it do harm in the beginning, it will do more harm the longer it is persevered in.

We have stated the loss to the public by Lord Henry Petty's system in twenty years, at L.65,519,205, or, deducting the saving in taxes, at L.43,412,538. But it may be justly estimated at a sum considerably higher. The above is the sum which the public must pay to the national creditors, or remain under the burthen of; in addition to the sums raised by loan, and applied to the national service. It arises from the operation of compound interest against the public, and is incurred for the sake of postponing the payment of interest, which should commence when the debt is contracted, to a distant time. But besides this, another loss is incurred by the system of borrowing larger sums than are wanted, in order to maintain a sinking fund, the consequences of which were considered in the last chapter; and a further loss is incurred by borrowing in a three per cent. fund during war, when the price is low, to be repaid during peace when the price is high, the consequences of which will be farther considered in a following chapter. These two sources of loss indeed attach to other systems, where similar measures are followed, as well as to Lord Henry Petty's; but they take place in his system  
to

to a greater degree, because the measures from which they arise, are carried there to a greater extent.

The distinction of war tax loans and supplementary loans, is in itself entirely futile: But occasion is taken from it to ascertain the portions of debt for which the interest shall be levied in taxes, and the portions, for the interest of which no provision shall be made at present. The proportion of these, like the scheme from which they arise, is altogether arbitrary, and very irregular, —the taxes imposed in the early part of the system being much smaller than those imposed afterwards.

After a continuance of twenty years, the sum raised in taxes within the year, is L.13,613,333, being L.2,613,333 more than it would have been under the old system, though less by L.662,627 than it ought to be, in order to cover the interest of the debt. This, and an additional capital of L.65,519,205, is incurred, for the sake of saving L.22,106,677 in taxes during these twenty years, chiefly in the early part of them. In the 16th and following years, the taxes raised within each year are greater than those required by the old system.

## CHAPTER IV.

### • *Examination of Mr. Vansittart's Plan of Finance.*

I, This plan has been assailed as trenching on the sinking funds formerly established, and thereby diminishing the security of the public creditors, to whom the national faith is pledged on the terms of these funds. It does not seem liable to any just censure upon this ground. It is justly observed, that “ the separation kept up for the  
“ purposes of account between the original sinking fund of 1786, and the additions subsequently made to it, is only nominal; it neither  
“ has been nor can be attended to in practice, because the whole of the debt contracted since  
“ the establishment of the sinking fund having  
“ been borrowed upon the old stocks, and no distinction made between the old and new proprietors, the whole debt is now considered as  
“ one indiscriminate mass, to which the purchases made by the sinking fund are equally applicable. No right of priority of redemption can  
“ exist in any particular class of stockholders, nor any conditions of repayment be claimed  
“ (except in the instance of the 5 per cent. loan of 1797) beyond those laid down in the act of  
“ 1792, under the faith of which all subsequent  
“ loans

“loans may be considered as contracted. By  
 “that act, provision is made for the redemption,  
 “within forty-five years, of all the debts subse-  
 “quently created; and within this limit, Parlia-  
 “ment has the power to regulate the mode of  
 “redemption at its discretion.”\*

The advantages given to the public creditors by the regulations of Mr. Vansittart's plan, appear to place them in a situation equally favourable to that which they held under the enactments of 1792.

After all, the security of the public creditors, is not so much affected by any regulations adopted in the management of our finance, as by the magnitude and increase of the national debt. If the amount of the loans be greater than what the capitalists can easily supply, the consequence is a depression of the funds; and this, at the same time, that it occasions the loans to be contracted on unfavourable terms, induces a loss upon those stockholders who are obliged to sell. The largeness of the loans, and the high amount of funded capital, are the real causes of the depression of the funds; and no security ever was or could be given to the public creditors, at the contraction of any loan, that could limit the contraction of such debts in future as the exigencies of the times might require; and if the amount of debt seem to approach to its utmost limit, while the

\* Outlines of a Plan of Finance, 1813, pages 6 and 7.

the public expense is still increasing, the dread of a national bankruptcy will depress the funds in a still higher degree.

A private creditor attends to the amount of the debts, and the comparative state of the income and expenses of his debtor. If he finds his debts increasing beyond the measure of his estate, his alarms will be excited, and they will not be much relieved by any detail of the arrangement of his affairs which the steward may communicate to him.

II. It is observed, that “ nothing more can be expected in a permanent war system than to provide for such a scale of expense as must necessarily arise out of the war, without including that great increase which has been occasioned by our extraordinary exertions abroad in the four last years,—which must be considered as only of an occasional nature,—that the equalization of the public income and expenditure may be considered as a primary advantage of the sinking fund ; and this object, so far as is requisite to meet that part of the expenses of the war, which may be considered as necessarily permanent, appears to have been already accomplished.”\*

The doctrine here laid down cannot be admitted without considerable limitation. If the situation

\* Outlines, 1813, pages 4 and 5.

tuation of a nation, as connected with surrounding nations, and the system of conduct observed toward them, be such as to promise alternate periods of war and peace at no long intervals, the proportion of revenue and expenditure may be regulated with a view to such a prospect. When there is a probability of a long continued war, (and the outlines appear to be drawn with a view to that case) the public revenue must be raised to the average of war expenditure, in order to prevent the risk of our finances being overwhelmed. If, during the continuance of war, the expense of one year, or of a few years, should, from special circumstances not likely to recur, much exceed the average war expenditure, it is consistent with safety, and proper, that the revenue should equal the average expenditure, and not the increased expenditure of these years. There is the same reason for this, as for regulating the revenue under a system of alternate peace and war, to the average expenditure of a period which comprehends both. So far the doctrine is admitted. But the application to existing circumstances should be made with caution. We ought to enquire what reason there is to believe, on the supposition of the continuance of war, that the expense of the following years will be less than that of the present and immediately preceding ones. Shall we have fewer enemies? Do we propose to carry on our operations, by sea or land,

land, on a less extensive scale? Can we support our armies and navy, or defray any branch of public expenditure, at a lower, or even an equal sum, as we did some years ago? Have we fewer foreign possessions to defend? Shall we be less lavish in bestowing subsidies at every quarter? We have often flattered ourselves, during the late war, that our expensive exertions would not be of long continuance, and these hopes were uniformly disappointed.

III. No observation is juster, or of more importance, than that already quoted from the Outlines, of considering the whole public debt as *one indiscriminate mass*. We have had occasion to enlarge on this point in former parts of the present inquiry. By the system of frittering down the public debt into various portions, and allocating different funds for the discharge of each, and noticing the time when this and the other part would be discharged, the public has been misled, and even our financiers have not escaped embarrassment. In the Outlines, however clearly the above principle is laid down *in limine*, it seems to be lost sight of in the detail. In the tables annexed to the Outlines, the time when *each loan* will be discharged, according to the different systems and suppositions, is calculated with special care, and seems to be considered as an important circumstance.

IV. The

IV. The system now under consideration is attended with the same palatable feature which accompanied that of Lord Henry Petty's, of promising an exemption from additional taxes for the three next years, and a smaller amount of them in the succeeding years. The manner of obtaining the former of these points is by declaring the debt of 1786 cancelled, and allocating the sinking fund, provided for it, to bear the charge of the new loans. This is merely a point of official regulation. The measure itself is attended with no injury to the national creditors; but it is not clear that it is salutary for the public. Whenever a nation does not tax to the amount of its expenditure, an increase of debt, to a higher amount than the sum saved in taxes, is inevitable; and in the comparison of different systems, those which impose the lightest taxes must always bring on an increase of debt in a still higher degree. This principle has been fully illustrated in former parts of this inquiry: We shall now state its application to the different suppositions considered in the Outlines.

The first hypothesis, contained in Table A. annexed to the Outlines, is that of an annual loan of 28 millions, at 5 per cent. which is reduced in the then existing system to 27 millions, in the year 1821, but continues without diminution in the new system. To exhibit the comparative effect of these systems on this hypothesis, Table X. is

G g

inserted

inserted in our Appendix,\* from which it appears that the amount of additional taxes to be laid on from 1814 to 1821 inclusive, according to the existing system, is - - L.14,933,328  
According to the new system, - 7,099,110

---

The whole amount of additional taxes levied these eight years, by the existing system, is - L.67,199,976  
By the new system, - - 22,227,352

---

Excess of taxes by existing system, L.44,972,624  
The debt created, by either system in these eight years, is - 224,000,000

---

The amount of the sinking fund, Existing system, - L.152,912,380  
New system, - - 99,278,439

---

L.53,633,941

---

Additional debt unredeemed, Existing system, - - L.71,087,620  
New system, - - 124,721,561

---

The

\* See Note XXXII.

The national debt (reduced to 5 per cents.) is greater, after eight years, in the new system, by L.53,633,941  
 Saving in taxes, new system, during that period, - - 44,972,624

---

Excess of additional debt, above saving in taxes, - - L.8,661,317  
 The amount of additional taxes to be imposed in sixteen years, from 1814 to 1829 inclusive, by the existing system, is - L.29,333,328  
 By the new system, - 16,524,392

---

The whole amount of additional taxes levied these sixteen years, by the existing system, - L.251,466,600  
 By the new system, - 118,859,736

---

Excess of taxes by existing system, L.132,606,864

---

Debt contracted in these sixteen years, existing system, - L.440,000,000  
 New system, - 448,000,000

---

Amount sinking fund, Existing system, - - L.403,586,488  
 New system, - - 226,114,350

---

Additional debt unredeemed, Existing system, - - L.36,413,512  
 New system, - - 221,885,650

---

The national debt (reduced to 5 per cents.) is greater after sixteen years, in the existing system, by - - - L.185,472,138

Saving in taxes, new system, during that period, - - - 132,606,864

Excess of additional debt above saving in taxes, - - - L.52,865,274

The hypothesis in Table B. annexed to the Outlines, is that of an annual loan of 25 millions, at 5 per cent. reduced, in the existing system, in 1821, to 24 millions. According to this hypothesis, there is more additional debt contracted and unredeemed by the new system, in the first eight years, to the amount of L.51,543,153

The saving in taxes is - - - 43,626,792

Excess of additional debt above saving in taxes, - - - L7,916,361

The unredeemed national debt (reduced to 5 per cents.) will be greater in the new system, after sixteen years, by - - - L.184,692,891

Saving in taxes, - - - 130,208,242

Excess of additional debt above saving in taxes, - - - L.54,484,649

The hypothesis in Table C. is that of an annual loan of 12 millions, at 3 per cent. reduced, in the existing system in 1826, to 11 millions.

Accord-

According to this hypothesis, the national debt, on the new system, is greater after sixteen years, by - - - L.59,566,359  
 Saving in taxes, - - - 46,992,592

---

Excess of additional debt above saving in taxes, - - - L.6,573,767

The hypothesis in Table D. is that of the continuance of war until 1820, and afterwards alternate periods of ten years peace and war; annual loans of 25 millions, during war, but reduced in the existing system after 1821 to 24 millions; interest during war, 5 per cent., during peace, 4 per cent. According to this hypothesis, the national debt is greater by the new system, at the end of 7 years war, by - L.42,000,234  
 And the saving in taxes, - 25,600,907

---

Excess increase of debt above saving in taxes, - - - L.6,399,327

During the next ten years of peace, the sum applicable to the discharge of the public debt, in the existing system, is greater by L.114,435,708  
 And the aggregate of additional taxes in that period is greater by 81,383,850

---

Excess of sum applicable to discharge of debt above additional taxes, - - - L.33,051,858

V. The next circumstance which claims our attention

attention is the periods at which additional taxes are proposed by the new system. All the late systems of finance have held forth a distant prospect, that, after a certain period, more or less remote, the national revenue would become equal to its expenditure, even in a state of continued warfare, and therefore no further taxes would be needed. If that period should ever arrive, it is obvious that the amount of taxes then levied must be much greater than what would at present cover our expense. For what reasons then do we not now raise them to that amount? We shall not ascribe this to our propensity to stave off the evil day at present, and leave posterity to provide for themselves as they can. In whatever degree this motive may operate, it is too unprincipled to be openly avowed. The only other reasons we remember to have heard adduced, are, that the nation is increasing in wealth, and will be better able to bear heavier taxes at a future time; and that a sudden increase of taxes would occasion so much discontent that a Minister dare not attempt it; whereas taxes, at first moderate, and increased at intervals, are submitted to with less reluctance, and do not become unproductive in an equal degree by occasioning the disuse of the articles taxed. We shall not at present enter into a discussion of these reasons. Whether we refer the deferred and gradual increase of taxation to either or both of them, or to any other that can

can be imagined, they concur in this point, that additional taxes should be imposed annually and equally, while the public necessities continue the same. By the new system, the amount of taxes imposed in different years is very unequal. According to the first hypothesis there are no additional taxes imposed in the years 1814, 1815, and 1816. In 1817, the additional taxes come near to L.1,300,000; in 1818, they fall below L.700,000; in each of the three following years they amount to about L.2,000,000; in 1822, there are no additional taxes; and in 1823, the additional taxes little exceed L.600,000. Like inequalities occur in the following years, and according to the other suppositions. The reason of this is, that the amount of taxes imposed is regulated by the periods at which the loans of former years are declared to have been redeemed. If several loans, or one large loan, fall in, no new taxes are imposed. If none fall in within the year, a large amount of additional taxes is had recourse to. Thus the amount of taxes to be imposed in future years is made to depend on the amount of loans contracted many years ago, and the period of the redemption of these loans, as ascertained by their terms, and the sinking funds appropriated to them at their contraction, under the regulations of the new system. There seems to be no good reason for regulating the periods of additional taxation in this manner. The several

ral loans constitute the public debt, united into *one indiscriminate mass*. If the means adopted to meet the increase of this debt be a progressive increase of taxation, the progress ought to be uniform; or if otherwise, any diversity ought to arise from the circumstances and exigencies of the times when the taxes are imposed, and not from the discharge of former loans as estimated by an artificial system. In time of war, there is no real discharge of debt, but an annual contraction of debt, equal to the difference between the capitals created and the capitals redeemed.

VI. An advantage of a very extraordinary kind is affirmed to result from this system. "The principal advantage of the proposed plan in time of peace, would be the facility of keeping in reserve a large sum (suppose L.100,000,000) as a resource in the case of the renewal of hostilities. This fund, which would be formed in a few years by the redeemed stock standing in the name of the Commissioners, would be continually increasing, unless checked in the manner abovementioned; and in no case should be reduced below such a sum as may be thought amply sufficient to support the confidence of the country at home, and maintain its dignity abroad. It would indeed be *such a treasure as no other country has ever possessed*, and the first example of an immense accumulation of public property,

“property, formed without the impoverishment  
“of any individual, or any embarrassment of the  
“general circulation.”\*

We are altogether at a loss to form a distinct conception of the nature of the *valuable treasure* here held forth. So soon as any stock is purchased by the Commissioners, and stands invested in their name, a like amount of the public debt is in fact discharged. Whether a Parliamentary declaration to that effect be made or not, is only a matter of form. If the money remain vested in the name of the Commissioners, no doubt it may be transferred again to purchasers, in the stock exchange, when war breaks out anew, and money may be raised for the public in this manner. But this is in every respect a new loan. It is an application to the public to invest their capital in the purchase of this dormant stock. The capitalists must be possess of the sum wanted; and they will not part with it, except upon terms from which they derive a profit. They would do this with equal readiness, if a loan was proposed to them in the ordinary form. We can discover no facility or advantage which the public could derive from a loan conducted in this manner, rather than any other. Indeed the inefficacy of this *reserved treasure* appears so clear, that we almost doubt whether we have rightly apprehended the  
nature

H h

\* Outlines, page 17.

nature of the resource held forth : But we are not able to affix any other meaning to it.

If it be said that the whole capital of funded debt was once in circulation, and although a part of it is for a time withdrawn, it may be brought into circulation again, this amounts to no more than that the nation, having once born a greater amount of debt than at the time alluded to, may be expected to be able to bear a like amount again. This may be affirmed either of a nation or a private estate, if other circumstances remain the same ; but it is not much to the purpose. The proprietor of the private estate, who has experienced the hardships that result from being in debt, will feel little solacement, after these are relieved, from the consideration that if he chooses to engage in a fresh career of extravagance, he will only be plunged again into the same difficulties ; and if ever the public be partially delivered from that load of debt which cramps its national operations, and occasions privations to the individuals who compose the public, it will be no great source of rejoicing that it may engage in new wars for a season without undergoing greater hardships than those which it had experienced before.

It is true, that if the taxes imposed during war for the purpose of a sinking fund, be continued after peace is restored, till a large sum (suppose L.100,000,000) be vested in the hands of the  
Commis-

Commissioners, the public, upon the renewal of war, may spend to that amount without imposing fresh taxes. This amounts to no more than that if we choose, during peace, to submit to the hardships of war taxation after our debt is partially discharged, we may engage again in war, without bearing heavier burthens than those from which we might have been delivered, if we had repealed the taxes as the debt was discharged.

VII. In examining this and the other systems of finance, we have chiefly confined ourselves to a view of the effects expected from them, during the first 16 years or thereby from their establishment. Such a period is fully sufficient to ascertain their merits. In the Tables annexed to the plan, their operation is traced for a much longer time. That of the sinking fund, Table C. 2. is extended as far as the year 1866 ; and we are informed, in a note, that the remaining debt will be redeemed according to the existing system in the year 1912, and according to the new system in the year 1875. It is altogether unnecessary to trace their operations to such distant periods. It is morally impossible any system can be adhered to so long. Sir Robert Walpole's sinking fund was never supported with efficacy. Mr. Pitt's sinking fund commenced in 1786, and was corroborated in 1792 ; considerably infringed on in 1798 ; underwent a great alteration in 1802 ; was

laid aside for Lord Henry Petty's plan in 1807; revived in 1808; and is now superseded by Mr. Vansittart's plan in 1813; and it may be almost certainly foreseen that measures different from those now proposed will be had recourse to by succeeding financiers. This will arise, not only from the different views of different men, but from the change of circumstances which the fluctuation of human affairs always induces. The proper measures to be followed in that great department of national administration half a century hence, will depend on the exigencies and resources of the time, and cannot be foreseen at present.

## CHAPTER V.

### *General Observations on Sinking Funds.*

I. IN the resolutions frequently proposed by Ministry to Parliament, in order to exhibit a general and comparative view of the state of our finance at different periods, the proportion of the sum applicable to the discharge of debt, to the debt itself, is introduced, and seems to be considered as an important circumstance. This proportion in 1788 was  $\frac{1}{238}$ , in 1793 it was  $\frac{1}{160}$ , in 1803,  $\frac{1}{77}$ , in 1809,  $\frac{1}{54}$ , and in 1813,  $\frac{1}{44}$ . The inference drawn from this growing proportion is, that although the national debt has greatly increased, the means provided for its discharge have increased in a still higher degree, and therefore its present magnitude affords no cause of alarm.

The extent of the sinking fund is artificial, and may be brought, by a mere change in the arrangement of the public accounts, to bear any proportion to the amount of debt, without the slightest advantage, or any tendency to promote its discharge. In time of war, we raise a certain sum by taxes for the expense of the year, and borrow what farther is wanted.

ed. If a sinking fund be maintained, the sums appropriated are deducted from what would have otherwise been expended on the war, and a greater loan is required. We may throw into the sinking fund any share of the revenue we please. We have only to add as much to the loan, and we shall raise a larger sum in the form of loan, with the same facility, by the effect of the sums thrown into the money market for the stock purchased by the Commissioners. In time of war, the sinking fund is nominal; in time of peace, a large sinking fund will discharge the debt more quickly; but this amounts to no more than that a continuance of the taxes, which we paid in war, after peace is restored, will be attended with a speedier reduction of debt, than what would take place if a large part of these taxes were repealed.

II. A similar circumstance, held forth to ease the alarms arising from the magnitude of the national debt, is the progress already made in its discharge by the sinking fund, and the large sum redeemed. We are told that these operations have succeeded beyond expectation, and that the whole debt existing in 1786, amounting to 238 millions, is already paid off. This is altogether fictitious and delusive. We may pay off as much debt as we please at any time by borrowing: But the only real alteration in the state of our finance  
is

is the difference between the debt contracted and the debt paid off ; and while the former of these exceeds the latter, our situation is growing worse to the extent of that difference.

A private gentleman, whose estate is incumbered, may, if he have any credit, pay off all his debt every year, by borrowing from other hands ; but if he spends more than his free income, his embarrassments will continually increase, and his affairs are so much the worse by being conducted in this manner, from the fees he pays to his agents. The absurdity of supposing any advantage derived from this annual discharge of his debts will appear still stronger, if we suppose him, instead of borrowing from other hands, only to renew the securities to the same creditors annually, paying a fee to the agents, and a *douceur* to the creditors themselves on the renewal. All these observations are equally applicable to the debt of a nation, conducted as ours is. It would not be impracticable, or very difficult, to redeem our whole debt in any year, if the measures we follow be redemption. It would only require a large loan every month, and the large sums we were thus enabled to pay would supply the funds for these loans. Our capitalists would be well pleased to promote these loans, as they would derive a *bonus* from each. Such a system would be ruinous in the extreme ; and the system we follow

low is the same on a smaller scale, and is therefore only pernicious in a less degree.

In the year 1786, our funded debt was 238 millions. We had paid all this off in 1813, but we had contracted (exclusive of the loans of that year) a new debt of 574 millions. Does not this amount to the same, as that we had paid no debt at all, but contracted an additional debt of 336 millions?

III. The dangers, arising from the magnitude and progressive increase of the national debt, ought to be laid before the public without exaggeration, but without palliation. Another source of alarm has been started of late years, of the evils to be apprehended from too great an increase of the sinking fund, and too rapid a discharge of the national debt, or too sudden a repeal of taxes. These fears were first announced (at least with any degree of energy) on the publication of Lord Henry Petty's Plan of Finance, in 1807; and they seem to have taken considerable possession of the public mind. "It [the plan of 1802] would throw such  
 "large and disproportioned sums into the public  
 "market, in the latter years of its operation, as  
 "might produce a very dangerous depreciation of  
 "the value of money. Many inconveniences  
 "might also arise from the sudden stop which  
 "might be put to the application of these sums,  
 "when the whole debt shall have been redeemed,  
 "and

“and from the no less sudden change in the  
 “price of all commodities, which must follow  
 “from taking off, at one and the same moment,  
 “taxes to an extent then probably much exceed-  
 “ing 30 millions.”\*—“This successive redemp-  
 “tion is, indeed, a point of no small importance  
 “to the regulation of the money market, as the  
 “rate of interest, and the value of money might  
 “be very inconveniently affected by the too rapid  
 “increase, or the too sudden reduction of the  
 “sums brought into circulation by the sinking  
 “fund. It should not, therefore, be suffered to  
 “accumulate for too long a period, while, on the  
 “other hand, it should not be too much dimi-  
 “nished, by extinguishing at once too large a  
 “proportion of the public debt.”† We have seen  
 the fears of these inconveniences urged, in some  
 private publications, in still stronger terms.—  
 They appear to us altogether groundless.

The operation of the sinking fund during war,  
 when loans to a higher amount are annually con-  
 tracted, we trust we have evinced to be altoge-  
 ther fictitious. It is not probable, that during  
 the continuance of war, taxes will be raised to the  
 measure of war expenditure ; but they are likely  
 to exceed much what is wanted for a peace esta-  
 blishment ; and the excess is likely to be larger,  
 the longer that war is continued. At the restora-  
 tion of peace, the nation possesses a surplus re-  
 venue,

venue, which may be either diminished or annihilated altogether, by the repeal of taxes, or applied to the discharge of the public debt. We have already annihilated a great part of this surplus by the repeal of the property tax; and it is proper and probable that we shall continue to embrace both measures. The proportions of surplus revenue to be disposed of, the one way or the other, are completely at command, and ought to be determined from the state of affairs at the time, and not from the results of an artificial system, laid down many years before.

It was generally believed, during the war, that, when it terminated, prudence would require us to support a higher peace establishment than we ever did before. We have done so since the restoration of peace, and are likely to continue it. This prospect alone may allay our fear of bad consequences from too sudden a discharge of debt.

Those who believe, as we do, that the load of public debt is a great evil, and that its discharge would be a great deliverance, may at the same time admit, that a *sudden alteration*, however beneficial in its ultimate result, would be attended with serious inconveniencies, and that every precaution should be employed to prevent or alleviate these.

The inconveniencies apprehended, arise from the difficulty of employing the capital paid off, and the reduction of the rate of interest.

A

A low rate of interest is generally esteemed beneficial, and is said to have prevailed in the wealthiest and most flourishing nations, while the rate has been much higher in those that were in a semi-barbarous state. We do not admit this doctrine without considerable qualification; but could not discuss the argument without a length of digression unsuitable to this place.

We have no doubt that the whole capital, at present invested in the funds, may be beneficially employed in agriculture, manufacture, and commerce, and thereby prove a source of increasing wealth to the country. But this cannot be done all at once. These objects must expand by degrees, and no more capital should be paid off in any year that can be otherwise disposed of to advantage. We have little apprehension that we should have more to offer; but, if the case should be otherwise, we can restrict it, in any degree, by the repeal of taxes.

Apprehensions of inconveniencies from the sudden amelioration of the circumstances of the middling and lower ranks, arising from the repeal of taxes, have been insinuated. We cannot enter into these views. That numerous part of the community, which has for some time laboured under great privations, when they feel this relief, will afford themselves a greater share of the comforts of life; and, by their additional consumption, give encouragement to agriculture,

manufacture, and trade. Excess, in a certain measure, will be the consequence of affluence in every rank ; but it will not be maintained that, in order to avoid that evil, all ranks should be kept in a state of depression. The sudden dismissal of many of the officers employed in collecting the revenue is surely too trivial an object, and admits of too obvious remedies to merit notice. One evil apprehended from the sudden repeal of taxes is the loss which dealers would sustain, by the fall in price of the commodities on hand, on which the taxes were repealed. This class of men gained by the rise in price of commodities on hand when the taxes were imposed. We would not, however, wish them to undergo a loss on their repeal. This might be greatly alleviated, if not altogether prevented, by allowing a considerable time between the enactment and repeal, and by other regulations suited to that purpose.

A funded capital, transferable as ours, is considered to be beneficial, as affording an easy and secure way of investing small sums belonging to persons in the lower ranks of life—the hard-earned savings of industry. There is something in this ; but there is no reason to apprehend the amount of our funded debt will ever fall so low as to be insufficient for that purpose.

## CHAPTER VI.

### *Examination of the System of Funding by Increase of Capital.*

IN the early part of the funding system, the capital assigned to the public creditor seldom exceeded the sum advanced by him. We find only two slight deviations from this rule during the seven years war, and one in the American war, before 1781. Annuities for years or lives were granted, as a bonus on many of the loans, during these periods. Afterwards, when the difficulty of raising loans increased, capitals were assigned to the creditors much higher than the sums advanced; and this practice has been continued since to a great extent.

It has been maintained in the House of Commons, on the part of Ministry, and, if we mistake not, even admitted by the Opposition, that it was the duty of a financier to raise the loan at the least annual expense it could be procured for, without regard to the amount of the nominal capital. We apprehend that this opinion is indefensible, except upon the supposition that all views of discharging the national debt, or any part of it, are for ever laid aside; and that the measures founded on it  
are

are very pernicious. The nation ought to pay no more in discharge of debt than the sum borrowed, together with the interest during the time the debt subsists. By the system now followed, it pays, besides, the excess of the capital assigned above the sum borrowed, in case the redemption be at par. Or, if the price of the funds enable the public to redeem the debt on lower terms, the nation pays, in addition to the sum borrowed, the difference between the price of stock at the times of borrowing and paying, which is always great.

The terms of the debt contracted during the American war, and since the commencement of the war in 1793, have been already given. The excess of the capital funded, above the money borrowed, is as follows :

	Sums borrowed.	Capital funded.
Debt contracted during American war, - -	L.91,763,842	L.115,267,993
Loans from 1793 to 1816, inclusive, - - -	420,307,425	658,506,728
Bills funded in that period,	89,148,773	107,030,717
	<hr/>	<hr/>
	L.601,220,040	L.880,803,438
Of which redeemed, -	183,369,223	291,719,172
	<hr/>	<hr/>
	L.417,851,817	L.589,086,266
		<hr/>
		417,851,817
		<hr/>
Excess of capital above sum raised, -		L.171,234,449
		<hr/>

Thus

Thus it appears, that if the funded debt, contracted since the commencement of the American war, were paid off at par, the nation would pay above 171 millions more than it ever received, which is more than four-tenths of the sum borrowed, deducting that expended in redemption. The far greater part of this excess has arisen since the war of 1793, and almost the whole of it since the year 1780.

The national creditors are not obliged to accept of payment under par, that is, a sum equal to their nominal capital. But as they cannot, like private creditors, demand payment, and as the price of those funds which bear a low rate of interest is generally under par, it has been in the power of the public, in former intervals of peace, to pay off part of the national debt considerably under par, with the voluntary consent of the creditors; and the same end is now obtained, in a more constant manner, by the purchases made by the Commissioners.

Dr. Price was of opinion, at the time he wrote, that the three per cents. on the return of peace, would rise to par, or above it; and he considered that as a desirable event. Whether it would be so, we may hesitate to pronounce, when we attend to the variety of interests involved. It could not take place without a general reduction of the rate of interest; and this must be accompanied by a like reduction of the profits on trade  
and

and manufacture. It would obstruct the redemption of the national debt under par, and prevent its being accomplished, unless at the loss abovementioned.

But we do not consider the rising of the three per cents. to par as a probable event; and had Dr. Price lived to see the magnitude which our debt has now attained, it is likely he would have been of the same opinion. From the establishment of the sinking fund to the 1st of February, 1791, there was L.6,772,350 of the three per cents. redeemed for L.5,424,592, being at the rate of 80 nearly.

Now, if we suppose the three per cents. redeemed at 80,\* and the four per cents. and five per cents. at par, the sum required for the redemption of the abovementioned debt would be,

L.386,366,568	Capital in three per	
	cents. at 80,	L.309,093,254
202,719,698	Capital in 4 and 5	
	per cents. at par,	202,719,698
<hr/>		<hr/>
L.589,086,266	redeemed for	L.511,812,952
	Sum borrowed,	417,851,817
		<hr/>
		L.94,961,195

Hence the loss incurred by the public on this favourable supposition would be 95 millions, in discharging the whole capital, and a like proportion for any part of it that might be discharged during a period of peace.

This

\* See Note XXXIII.

This system was only in its infancy when Dr. Price wrote, and he censures it in the following terms:—" In 1758, the lenders of L.6,600,000 " were entitled to a capital of L.115 for every " L.100 subscribed, or L.7,590,000 in the stock " of the three per cent. annuities: The conse- " quence of which must be, that, in discharging " this debt, 15 per cent. or near a million, must " be paid, which was never received, and by " which nothing has been gained.—Were a per- " son in private life, to borrow L.100, on condi- " tion it should be reckoned L.200 borrowed, at " two and a half per cent. he would, by subject- " ing himself to the necessity (if he ever dis- " charged the debt) of paying *double* the sum he " received, gain somewhat of the air of borrow- " ing at two and a half per cent. though he real- " ly borrowed at five per cent. But would such " a person be thought in his senses? One can- " not, indeed, without pain, consider how need- " lessly the capital of our debts has been, in se- " veral instances, increased.—Thus do spend- " thrifts go on, loading their estates with debt, " careless what difficulties they throw on the dis- " charge of the principal, leaving that to their " successors, and satisfied with any expedients " that will make things do their time."\*

This censure, severe as it is, appears in a great

K k

measure

\* Preface to 3d edition of Observations on Reversionary Annuities, page 14.

measure deserved. We ought, however, to pay attention to any saving of interest, which is the inducement for contracting the public debt in the manner that has been followed.

The natural proportion of the price of capital in the three per cent. four per cent. and five per cent. funds, is the same as that of the respective rates of interest. Thus, if the five per cents. be at par, the four per cents. should be at 80, and the three per cents. at 60; and this proportion, except some slight deviations from transient causes, would continue to hold when the prices rose, if it were certain the debt would never be redeemed. The only object, in that case, in which the national creditors are interested, is to draw an annuity for the money they advance; and it would be to them a matter of indifference what denomination be given to the fund from which the dividends were drawn. If the three per cents. rose to 75, the four per cents. should rise to 100, and the five per cents. to 125. But as all the funds are redeemable at par,\* the actual price can never much exceed it. So soon as the five per cents. rise above par, the financier will offer payment, and by doing so, induce the creditors to submit to a reduction of interest.—The holders of stock in a three per cent. or four per cent. fund, have thus a prospect of gain by the

\* See Note XXXIV.

rise of value, in which the five per cent. stockholders do not participate ; and, in like manner, when the three per cents. rise above 75, the holders have a further gain in which the four per cent. stockholders do not participate. In consequence of these expectations, the price of four per cents. is higher, compared with that of the five per cents. ; and the price of the three per cents. higher than that of either of the others, than the proportion of the rates of interest ; and loans are transacted in the 3 per cents. on easier terms. The lender expects to gain by the rise of stock ; and what he gains, the public loses, at re-payment or redemption.

In order to estimate the extent of the difference of interest occasioned by funding in capitals of different sorts, we may consider the rates of interest paid by the public on those loans, and the sums funded, where the contract was made at one rate only, and not incumbered with a long annuity.

There have been eleven loans of this sort, in the three per cents. since the commencement of the war in 1793, the amount borrowed being L.157,650,000, and the sum funded L.267,804,500, the interest of which is L.8,034,135, being at the rate of L.5 2s. per cent. at an average on the sum borrowed ; the particulars being as follows :

k k 2

1793,

	Sums raised.	Capital funded.	Interest.
1793,	4,500,000	6,250,000	187,500
1798,	3,000,000	5,624,250	168,727
1799,	12,500,000	21,875,000	656,250
1800,	18,500,000	29,045,000	871,350
1801,	25,500,000	44,816,250	1,344,488
1804,	10,000,000	18,200,000	546,000
1805,	20,000,000	34,400,000	1,032,000
1806,	18,000,000	29,880,000	896,400
1810,	8,000,000	11,230,000	336,900
1812,	15,650,000	27,544,000	826,320
1814,	22,000,000	38,940,000	1,168,200
	157,650,000	267,804,500	8,034,135

There was only one loan, and one operation of funding bills, at 4 per cent. viz.

	Sums raised.	Capital funded.	Interest.
1808, Loan,	L.8,000,000	L.9,454,000	L.378,160
1813, Bills funded,	3,755,700	5,220,423	208,817

L.11,755,700 L.14,674,423 L.586,977

The interest being at the rate of L.4 19s. 10d. at an average.

There have been twelve loans, and operations of funding bills, in the 5 per cents., viz.

	Sums raised.	Capital fund.	Interest.
1794, Bills funded,	1,907,451	1,926,526	96,326
1795, Bills funded,	1,490,647	1,609,898	80,495
1796, Bills funded,	4,226,727	4,414,074	220,703
— Loyalty loan,	18,000,000	20,124,843	1,006,243
1810, Bills funded,	8,311,000	8,581,108	429,055
1811, Bills funded,	7,018,700	7,278,392	363,919
— Loan & bills,	4,981,300	5,166,319	258,316
1812, Bills funded,	5,431,700	5,866,236	293,312
— Loan & bills,	6,789,625	7,332,795	366,639
1813, Bills funded,	12,000,000	13,860,000	693,000
1815, Bills funded,	10,313,000	12,066,210	603,310
— Loan & bills,	7,822,598	9,142,192	457,109
	88,292,748	97,368,593	4,868,427

The interest being at the rate of L.5 10s. 3d. at an average.

Another consideration considerably reduces this difference in the interest. In the loans, the public pays the whole interest for the year that the loan is transacted, although the money be advanced by instalments, or discount allowed if the whole be paid up at once. If the lender did not obtain this advantage, he would demand an additional capital at least equivalent to L.2 10s. in the five per cents. and yielding an interest of 2s. 6d. Nothing similar to this occurs in the transactions of funding bills, from which the greater part of the 5 per cent. stock arises.

Thus, for a difference not exceeding six shillings or, at most, eight shillings per cent. on the interest, the public, by borrowing in the three per cents. incurs almost a certainty of paying L.133 for every L.100 borrowed, and a risk of paying L.166, when the debt comes to be discharged.

This view of the result is unfavourable to the system of borrowing on an advance of capital, and a low nominal interest.

If the debts were never to be paid, it would be proper to borrow in the manner in which money could be raised at the least interest, as the capital, in that case, would be merely nominal: But, under such a view, the lenders would not accept of less interest in one fund than another. If there be a prospect of paying the debt, but at a very distant time, the public may gain more by saving of interest, than it loses by the additional

sum

sum ultimately paid. If the difference of interest be 8 shillings on L.100 borrowed, and the additional capital L.33, it would require 33 years before the accumulation of what was saved on the interest, at 5 per cent. compound interest, would become equal to the additional capital. But this is stating the saving too high, and the additional capital too low. If the saving of interest be 7 shillings, and the additional capital L.50, it would require 43 years for that purpose.

The only inducement which the lender can have for preferring a 3 per cent. capital, yielding a less interest, is the prospect of ultimate gain by the rise of the funds. This, he expects, will more than recompense the present loss he sustains by accepting an inferior interest. If he be right in his expectation, the public is a loser; and the lender, in this case, is more likely to conjecture right than the financier.

On the whole, we are of opinion, that the capital funded should never exceed the sum raised; and such a rate of interest should be allowed on this capital as the lender will accept of.

During a continued war, money often cannot be obtained for five per cent. interest; and it seems to be thought improper to give, in direct terms, a higher rate than can be legally taken in private transactions; though there is a necessity of doing so in an indirect manner.

For this purpose, it has been proposed to grant a long annuity, in addition to a capital equal to the  
the

the sum borrowed at 5 per cent. This measure, however, is liable to one considerable objection—annuities being irredeemable, the public have it not in their power to take advantage of a fall in that rate of interest during peace, so far as the debt is constituted in that manner. This was heavily felt in the reign of George I. A large part of the debt contracted in the two former reigns was upon annuities ; and when a general reduction of interest took place, a large additional capital was granted to the holders of these annuities, above the sum originally advanced, to induce them to convert their annuities into redeemable stock. There is not so much in the objection now, as the existing annuities form only a small part of the charge of our debt ; and as we have enough to redeem besides, we may leave them to expire by the course of time, without seeking to redeem them. Still there is some weight in it. That part of the national charge cannot be diminished without the consent of the annuitants, whatever alteration may take place in the current rate of interest.

The objection against granting more than 5 per cent. interest, in direct terms, when necessary, is perhaps founded more in prejudice than reason. We affix an immorality to what is deemed usury ; and, as we reprobate it in private life, we revolt at its admission into public transactions.

Many

Many intelligent men are of opinion, that our usury laws originated in narrow views of political economy; and ought to be repealed, now that the advantage of leaving commerce free, in all its branches, is understood. Should these opinions gain ground so far as to influence legislative measures, every objection against contracting loans at a higher rate of interest would be removed.

We have lately heard of a proposal for borrowing in the 3 per cent., or, (what comes to the same purpose) selling out 3 per cent. stock in the hands of the Commissioners, in order to pay off the 5 per cents. at par. This does not appear to us so exceptionable as funding in the 3 per cents. The loans in the 3 per cents. were generally contracted when these funds were very low. In that of 1804, L.182 capital was granted for L.100 raised. In the imperial loan of 1797, a capital of L.226 10s. was granted; and on an average of all the 3 per cent. loans, since the commencement of the war, about 170 has been granted. The public incurs the risk of paying all the additional capital, and a certainty of paying the greater part of it when the debt is discharged. At the present price of the funds, (Dec. 1817,) L.100 may be procured for about L.120 in the 3 per cents; and if this were applied to pay off L.100, 5 per cents., the public would be freed from L.5 of interest, while it only incurred L.3 12s., and thereby save L.1 8s. annually; while the ultimate loss by increase

create of capital could not exceed L.20, and might probably not be so much. There are, however, various other ways by which the public may gain advantage from the present state of the funds; and we give the preference to those which may be effected without increase of capital, though the present having were smaller.

We have seen a claim brought forward in the public papers, in favour of the stockholders, to whom payment might be offered, with an option of conversion; as if they should receive more than an equivalent in the 3 per cents. to recompense the diminution their incomes would sustain by the fall of interest. We consider such a claim as deserving the most decided reprobation. The capitalists have gained by that financial system, which has loaded the public with very heavy burthens; and it would be unjust and oppressive to the community, to pay them on more favourable terms than they have any claim to, or were ever held out to them. What would be thought of a private creditor, who, when offered payment of all that was due him, with interest, should demand from his debtor an additional sum, on the ground that he could not employ his money now in a manner that yielded so large a return as formerly?

It is impossible to go over this subject without remarking the great variety of modes that have been had recourse to in raising money. From

1793 to 1816, inclusive, there have been thirty-one loans, of which eighteen have been in the three per cents., and five of these have been aided by a long annuity. One has been funded in the four per cents. and four in the five per cents., three of which were blended with the funding of Exchequer Bills. Six have been funded partly in the three per cents. and partly in the four per cents.; five of which were accompanied by a long annuity : and two partly in the three per cents. and partly in the five per cents.

In the same period there have been thirteen operations of funding bills, besides those connected with the loans abovementioned ; of which eight have been altogether in the five per cents., one altogether in the four per cents. ; two partly in the four per cents., and partly in the five per cents. ; and two, jointly in the three, four, and five per cents. ; and to one of these a long annuity is attached.

## NOTE I.—Page 21.

THE increase of circulating medium, of whatever kind, by deteriorating the value of money, enhances the money price of manufactures and native produce, and thereby obstructs, *cæteris paribus*, their sale in foreign markets. In this respect, paper money is always disadvantageous. It may give encouragement to industry by extending private credit, and thereby prove beneficial; but its application in this way is apt to be carried too far. The consideration of its influence upon the rate of exchange with foreign countries, and the other effects it produces, would lead us beyond the bounds of our present subject.

## NOTE II.—Page 28.

SINCE the imposition of war taxes in 1798, the permanent revenue was divided during the war into two great branches :

1st, The consolidated fund, consisting of all the branches existing in 1786, when Mr Pitt's sinking fund was established, and many taxes which have been imposed since; and charged with the interest of the public debt, the sums payable to the Commissioners for its redemption, the allowance to the civil list, and pensions and other grants by Parliament. The surplus, which is always considerable, is applied to the current services of the year.

2d, The war taxes, consisting of the property-tax, and additional articles of customs and excise, appropriated thereto, and charged with the interest, &c. of the loans of 1807, 1809, and 1811, the amount of which is transferred from that branch of the revenue to the consolidated fund.

To these may be added,

3d, The duties granted annually. These were formerly the land and malt-tax: Since the land-tax was rendered perpetual, certain duties on sugar and tobacco, and the tax on offices, pensions, and salaries, formerly joined to the land tax, besides the malt-tax, have been granted annually. These annual duties have of late years been charged with three millions to the supplies, and the overplus is transferred to the consolidated fund.

#### NOTE III.—Page 36.

THE amount of foreign property in the British funds, as ascertained by the claims of exemption from property tax in 1806, was L.18,598,666, besides L.17,147 *per annum* of terminable annuities. This account does not include the bank stock, the duty on the dividends of which are paid by the company. The whole amount at that time, may be estimated at about 22 millions, being about 1-25th of the funded debt then existing, besides a considerable sum belonging to foreigners, who did not claim the exemption. The foreign property in the British funds, in 1762, has been estimated at 18 millions, being about 1-7th of the funded debt at that time. In a late anonymous, but seemingly authentic statement, the capital held by foreigners is estimated at L.16,599,421, besides L.6,363 of terminable annuities.

#### NOTE IV.—Page 45.

PARADOXICAL effects are ascribed to the increase of money by compound interest.

One

One penny put out at the Christian era, at five per cent. compound interest, would, before this time, have increased to a greater sum than could be contained in *five hundred millions of Earths*, all of solid gold.

Mr. Ricard appointed by his will, that the sum of 500 livres should be divided into five portions. The first, at the end of a hundred years, amounting to 13,100 livres, to be laid out in prizes for dissertations proving the lawfulness of putting out money to interest. The second, at the end of two centuries, amounting to 1,700,000 livres, to be employed in establishing a perpetual fund for prizes in literature and arts, and for virtuous actions. The third, at the end of three centuries, amounting to more than 226 millions of livres, to be employed for establishing patriotic banks, and founding museums with ample establishments. The fourth, at the end of four centuries, amounting to 30,000 millions, to be employed in building a hundred towns in France, containing each 150,000 inhabitants. The fifth, at the end of five centuries, amounting to four millions of millions of livres, to be appropriated for the payment of the national debt of Britain and France,—for producing an annual revenue to be divided among all the powers of Europe,—for buying up useless offices, purchasing a royal domain, increasing the income of the clergy, and abolishing fees for masses,—for maintaining all children born in France till they be three years of age,—for improving waste lands, and bestowing them on married peasants,—for purchasing manors, and exempting the vassals from all servitude,—for founding houses of education, workhouses, houses of health, and asylums for females,—for portioning young women,—for conferring honorary rewards on merit;—besides a large surplus to be appropriated at the discretion of his executors.

Dr. Franklin is somewhat more moderate in his views: He leaves L.1000 to the city of Boston, and a like sum to Philadelphia, to be lent out at interest to young artificers; upon proper security, in sums not less than L.10, nor more than L.60.

This

This plan, he says, if executed without interruption for an hundred years, will raise the capital to L.131,000 for each place, of which L.100,000 is to be applied for public works, such as fortifications, bridges, aqueducts, public buildings, baths, pavements, &c. The remaining L.31,000 to be lent out at interest for another hundred years, as before, when, if no unfortunate accident has intervened, it will amount to L.4,061,000; of which, L.1,061,000 to be given to the towns for such purposes as abovementioned; and the remaining L.3,000,000 to the Government of the State,—“not presuming,” says the Doctor, “to carry my views any farther.”

It is theoretically true that compound interest may accomplish all these things; but such extravagancies rather tend to throw ridicule on the subject, than increase our confidence in its operations.

#### NOTE V.—Page 60.

IN early times, all interest for money, or *usury*, as it was then called, was unlawful. Yet, in defiance of heavy penalties, necessity enforced the payment of interest, often upon exorbitant terms. The first statute authorising and limiting the rate of interest in England, was in the reign of Henry VIII. in the year 1546, when it was fixed at ten per cent. In the reign of his successor, Edward VI. all interest was again prohibited. In the year 1572, in the reign of Elizabeth, interest was permitted at the rate of ten per cent. In 1624, in the reign of James I. the rate was reduced to eight per cent. In 1651, during the usurpation of Cromwell, it was reduced to six per cent.; and this was confirmed at the Restoration. In 1714, it was reduced to five per cent.; at which, as the legal rate, it has continued since.

All these reductions by law seem rather to have followed than anticipated the actual rate of interest, arising from the commercial

cial state of the nation. To compel the lending of money at a lower rate of interest than that which naturally results from existing circumstances, is equally impracticable as to prohibit interest altogether. But when the actual rate of interest fell below the legal standard, that rate was reduced, to prevent particular acts of oppression.

In Italy and other states where commerce was earlier established, interest was reduced sooner and lower than in England. In Scotland, the reduction took place a little later. Interest there was reduced to eight per cent. in the year 1633, being nine years later than in England; and it was reduced to six per cent. in 1661, ten years later than in England.

NOTE VI.—Page 62.

THE terms of this tontine were, That the subscribers of L.100 5s. being distributed into six classes according to their ages, should receive the undermentioned annuities, with benefit of survivorship in their respective classes, till the annuity on the original share amounted to L.1000, after which the surplus is to fall to the public.

1st Class, under 20 years of age,	-	-	L.4	3	0
2d Class, from 20 to 30,	-	-	4	5	6
3d Class, from 30 to 40,	-	-	4	8	6
4th Class, from 40 to 50,	-	-	4	18	6
5th Class, from 50 to 60,	-	-	5	1	6
6th Class, above 60,	-	-	5	12	0

The amount of annuities granted on these terms (including a subsequent addition) was - - - L.18,847

And for the remainder, annuities for 69½ years were allowed at the rate of L.4 5s. for each subscription, as above, amounting to - - - L.24,565

And in order to place those persons who retained their shares in the tontine on the same footing as if the whole had been filled

ed up, the treasury was empowered to nominate lives among persons in public station, to be distributed in the several classes in the same proportion as the nominees appointed by the subscribers; by whose death, as well as that of the actual holders of the tontine, the benefit of survivorship should be regulated. The amount of annuities entered in these names was L.24,681: Thus the sum payable by the public is variable, according as a greater proportion of deaths happen among the real or fictitious nominees.

NOTE VII.—Page 68.

THE cause of the difference of the interest of money in this and several other loans was, that the orders for repayment were discharged according to their dates, and those who subscribed late were obliged to wait longer for repayment; and if the fund prove deficient, the whole inconvenience fell on them, for which reason they were allowed a higher rate of interest.

NOTE VIII.—Page 74.

THE sum appointed to be raised on annuities by 3d Anne, chap. 3. is L.300,000; but there appears to have been raised,

	<i>Annuity.</i>
L.200,820 on single lives, at 9 years purchase,	L.22,313 6 s
115,808 on two lives, at 11 years purchase,	10,528
47,756 on three lives, at 12 years purchase,	3,979 13 4
<hr/> L.364,384	<hr/> L.36,821

And, by an act of the following year, the holders of these annuities were entitled to extend them to the term of 99 years from

from their commencement, on payment of six years purchase for annuities on a single life; four years purchase for annuities on two lives; and three years purchase on annuities for three lives; and a like right was given to strangers when the holder of the annuity declined it. L.187,980 was raised by this conversion.

NOTE IX.—Page 78.

THE revenue appropriated to the civil list is charged not only with the personal expenses of the Sovereign and his household, but with part of the salaries of the judges, foreign ambassadors, and officers of state, and other expenses of civil government. The separation of these from the other branches of public expenditure took place after the revolution. In king William's reign, they amounted to about L.680,000 per annum. At the beginning of queen Anne's, certain branches of the revenue were granted during her life, to defray the expenses of civil government, which were estimated at L.700,000, but are supposed to have fallen short of that sum. Of this, L.100,000 was annually appropriated by that Sovereign in aid of the expenses of the war. The same revenue, with some alterations, was granted at the accession of George I.; but this, notwithstanding some casual accessions, being insufficient, L.1,000,000 was borrowed in 1721, charged on a duty on pensions, and still forms a separate article of our funded debt. At the accession of George II. the civil list was raised to L.800,000. The branches then appropriated to it were certain articles of the excise and customs, the profits of the post-office, part of the duty on wine licences, the revenue of the crown lands, and other remains of the ancient hereditary revenue, and L.120,000 charged on the aggregate fund. If these funds fell short of the stipulated sum, the deficiency was to be supplied by Parliament; but if they exceeded it, the Sovereign was to retain

the advantage. At first, they proved deficient, and grants were made, at different times, of upwards of L.500,000, to make up the sum; but in the latter part of the reign, they considerably exceeded it.

At the beginning of the present reign, these branches were transferred to the aggregate fund; and that fund was charged with L.800,000, as a full and permanent allowance for the civil list. This list was subject at that time to payments of L.50,000 to the princess dowager of Wales; L.25,000 to the duke of Cumberland, and L.12,000 to the princess Amelia; and soon after, L.58,000 to the queen. In progress of time, these burthens on the civil list were much augmented, by allowances to different members of the royal family.

To the abovementioned grant of	-	L.800,000
there was added in 1777,	- - -	98,000
in 1802,	- - -	60,000

---

L.958,000

And in 1812, at the commencement of the regency,	.	
there was granted during its continuance,	-	70,000
And transferred from the allowance formerly settled on the prince of Wales,	- -	50,000

---

L.1,078,000

And there is deducted L.100,000 for his majesty's expenses, L.60,000 for his privy purse, and L.10,000 additional to her majesty—in all,	-	170,000
--	---	---------

Leaving for the prince regent's civil list,	-	L.908,000
---	---	-----------

Besides these sums, charged on the consolidated fund, an allowance from surplus fees is transferred to the civil list, and now fixed at L.48,000.

The

The following sums have been granted in the present reign,  
in aid of the civil list.

In 1769,	-	-	-	L.513,581
in 1777,	-	-	-	620,000
in 1784,	-	-	-	60,000
in 1786,	-	-	-	30,000

---

L.1,223,581

And to the prince regent, for extra expenses, on

his assuming the functions of government, - 100,000

---

L.1,323,581

---

Besides these, large sums have been granted for expenses on the royal palaces, portions to the princesses at their marriage, and annuities to the several branches of the royal family. The amount of these annuities in 1817 was L.355,500.

Notwithstanding these augmentations and additional grants, the whole money appropriated to it during the present reign is inferior to the produce of the branches which formerly belonged to it; and the augmentations are by no means adequate to the deterioration of the value of money during the period.

The revenue of the civil list being still found inadequate to defray the charges, an act was passed in 1816, by which, among other regulations, pensions to different branches of the royal family, amounting to L.30,500, formerly paid from the civil list, are transferred to the consolidated fund. By a schedule, annexed to this act, the future probable annual charge is classed, and estimated as follows:

- Class 1. Pensions and allowances to the royal family, L.298,000
2. Allowances to the chancellor, judges, &c. 32,955
3. Allowances to foreign ministers, &c. - 226,950
4. Bills of his majesty's tradesmen, - - 209,000

---

Carried forward, - - L.766,905

m m 2

Class 5.

Brought forward,	-	-	L.766,905
Class 5. Departments of lord chamberlain, lord steward, master of the horse, master of the robes, and surveyor of the works,	-	-	140,700
6. Pensions, limited by 22 Geo. III. cap. 82. to			95,000
7. Salaries and allowances to certain officers and persons,	-	-	41,300
8. Salaries to commissioners of the treasury, and chancellor of the exchequer,	-	-	13,822
Occasional payments,	-	-	26,000

			L.1,083,727
			<hr/>

## NOTE X.—Page 85.

L.500,000 was authorized to be raised in 1726, by Exchequer bills, bearing interest at 2d. per day, charged on the victuallers' act, and L.481,400 thereof was raised. In 1743, a farther sum of L.518,600 was authorized to be raised, to complete a million; and, as the victuallers' act was repealed, the interest at 3 per cent. was charged on a duty on spirit licences. In 1746, the Exchequer bills issued upon these acts, amounting to L.986,900, were taken in by the Bank, and cancelled. The Bank were allowed 4 per cent. on that sum, which was then added to, and still forms a part of their permanent capital.

## NOTE XI.—Page 91.

ALL the loans contracted in the American war were connected with letteries. The subscribers to the loan of 1776 received,  
for

for every L.100 subscribed, stock in the 3 per cents. L.77 10 0

And three lottery tickets (in all 60,000) valued at

L.10. The prizes being funded, the holders of  
the fortunate tickets received a capital, in the  
same fund, of - - - - - 30 0 0

---

L.107 10 0

---

This arrangement was intended to afford a profit on the lottery tickets to the subscribers, and a plan still more beneficial was adopted in the loans of the following years.

The subscribers to the loan of 1777 received 50,000 tickets, being one ticket for every L.100 subscribed.

The subscribers to the loan of 1778 received 48,000 tickets, being eight tickets for every L.1000 subscribed.

The subscribers to the loan of 1779 received 49,000 tickets, being seven tickets for every L.1000 subscribed.

The subscribers to the loan of 1780 received 48,000 tickets, being four tickets for every L.1000 subscribed.

The subscribers to the loan of 1781 received 48,000 tickets, being four tickets for every L.1000 subscribed.

The subscribers to the loan of 1782 received 40,500 tickets, being three tickets for every L.1000 subscribed.

The subscribers to the loan of 1783 received 48,000 tickets, being four tickets for every L.1000 subscribed.

The subscribers to the loan of 1784 received 36,000 tickets, being six tickets for every L.1000 subscribed.

The subscribers to the loans subsequent to 1776 paid for their tickets at the rate of L.10, in addition to the sum advanced by them for the loans; and the prizes were not funded, as they had been in the seven years war, and in the lottery of 1776, but were paid to the holders of the fortunate tickets, to the extent of L.10 per ticket, in the spring of the following year.

NOTE

## NOTE XII.—Page 92.

A MORE particular account of the progress of the national debt, previous to the war of the French revolution, is now given than in our former editions, and the sums stated as due at different periods are not all the same. The original documents at the earlier periods are not now easily accessible ; and those who have treated on the subject before us do not always agree in their statements. We shall not detain our readers with a detail of the labour we have undergone in endeavouring to reconcile their differences, and obtain an exact statement. We have not always succeeded, and cannot warrant every sum now given, previous to the commencement of the late war, as exact ; but are confident, that no error is committed that can materially affect the general view of the subject, and the reasonings founded on it. We have not followed any one writer implicitly, but have endeavoured to state every article in the way that appeared nearest the truth.

We have distinguished the permanent funded debt, the capital raised upon annuities, and the unfunded debt. The first of these is easily traced, and we trust little or no error on that head is committed. In regard to the second, a large part of the debt, contracted in the reigns of king William and queen Anne, was raised on annuities, without any permanent capital ; and, in the accounts of the national debt published by authority, the sum originally advanced, deducting only so much as corresponded to what had fallen in by the death of the annuitants, was stated as part of the debt, and added to the permanent capital. These amounted, at the peace of Utrecht, to upwards of twelve millions : A great part of which was subscribed into the South Sea Company, in the year 1720, and thereby converted into permanent stock. When these transactions were completed, the following sums remained, for many years, charged as part of the national debt.

Annunities

	<i>Principal.</i>	<i>Annuities.</i>
Annuities for long terms, granted in the reigns of king William and queen Anne, not subscribed into the South Sea stock, -	L.1,836,275	L.136,453
Tontine annuities, 1692, -	108,100	7,567
Annuities for two or three lives, granted in 1693, decreasing annually, but originally, -	192,152	22,633
	<hr/> L.2,136,427	<hr/> L.166,653

The terms of the first of these expired in the years 1792, 1805, 1806, and 1807. The tontine annuities expired, by the death of the last nominee, in 1783. The other annuities for lives are, no doubt, all expired; but a remnant of L.8,195 still stands in the books of the Exchequer, the deaths of the annuitants not having been reported. In the statements we have given previous to 1793, we have followed the mode used in the official accounts, though it obviously over-rates the value of the annuities. By this arrangement, a sum of more than two millions is subtracted from the amount of the public debt, in the statements subsequent to 1786, not by payment, but by the operation of time; and, consequently, the debts paid in certain periods are represented greater, or those contracted less, than they ought to be.

The annuities granted at later periods (except the tontine of 1789,) are all in addition to a permanent capital equal at least to the sum advanced, and no capital is charged for them in the official statements. The first of these were life annuities, to the extent of L.22,500, granted on a loan during the rebellion, 1745, in addition to the permanent capital, at a time when public credit was low. Various other annuities have been granted for lives or years in the same manner.\* In some private statements of the national debt,† a value is put upon these, equal to the supposed

\* See Note XXI.

† By Dr. Price and others.

posed sum for which they might be bought off at the time: But as no such permanent capital existed, and there is little doubt of their being left to expire with the course of time, it seems more proper to view them in the light of an additional interest granted for a limited term, and state their amount and duration accordingly, in the enumeration of our public burthens.

We could not avoid some inaccuracy in stating the amount of subsisting life annuities, at some of the periods, not having met with a return of those which had fallen in by death since the former period; but any error of this kind must be very inconsiderable. Errors of greater magnitude are probably committed in regard to the unfunded debt, which we have not always accurate means of ascertaining. In regard to this, we must remark, that, in the statements previous to the American war, Exchequer bills, which were then circulated to a comparatively small extent, were classed along with the permanent debt; and what is stated as unfunded, consists of the debt of the navy, and other similar articles. In the later statements, the Exchequer bills are always classed as part, and generally the greatest part of the unfunded debt.

The statements of the unfunded debt since the commencement of the late war, are correct, so far as the returns to Parliament are compleat. We have estimated the interest on the unfunded debt, since 1748, at 3 per cent. It ought to have been higher at some of the periods.

One observation more is necessary. The total sums of debt, assigned at the different periods, comprehend the funded and unfunded. The latter of these cannot be discharged without payment of the full sum stated. The former may be redeemed for a less sum; and, as the proportions vary at different periods, the totals do not exhibit an exact comparative view of the amount of our burthens. There was no way of avoiding this, unless we had fixed a value on the funded debt, according to our views of what it might have been redeemed for. But as the prices of stock are continually fluctuating, an attempt to do so would

would have been liable to more exception than the statements we have given.

We may offer an apology for the acknowledged imperfection of this part of our work, from the inability of those who had every means of official information at command, to present a complete statement of the progress of our debts. In a Note, annexed to the account of the public debt presented to the House of Commons, in 1799, it is said, "It has been found impracticable to ascertain the amount of the sums raised at different periods, which created the capitals composing the several funds existing prior to 33 Geo. III. anno 1793."

The Note intended as XIII. being considered as unnecessary, is omitted.

#### NOTE XIV.—Page 105.

THE following annuities, expired before 1793, were transferred to the Commissioners for the redemption of the national debt.

Old long annuities, William and Mary,	-	-	£.54,881
Annuities, 17 Geo. III.	-	-	25,000

---

L.79,881

Which added to the annuities existing in 1792,	-	1,293,870
--	---	-----------

Makes up the sum stated by the select committee

of finance, in 1797,	-	-	L.1,373,751
----------------------	---	---	-------------

---

#### NOTE XV.—Page 109.

In funding the navy bills, 1797, option was given to the holders to receive capital either in the three per cents. the four per

N N

cents.

cents. or the five per cents. at different rates, according to the dates of the bills, as exhibited in the following table.

Bills dated before

	3 per cent.	4 per cent.	5 per cent.
1st January, 1796,	L.178 11 5	L.138 17 0 $\frac{1}{2}$	L.119 0 11 $\frac{1}{4}$
30th April,	176 19 9 $\frac{3}{4}$	137 18 7 $\frac{1}{4}$	118 6 10 $\frac{1}{4}$
31st July,	175 8 9	136 19 8 $\frac{3}{4}$	117 12 11 $\frac{1}{4}$
27th October,	173 18 3	136 1 1	116 19 2

If all the navy bills then funded, had been at the second of these rates, (which were the rates allowed for the Exchequer bills funded at the same time,) the amount would have stood as follows:—

L.9,293,483 in 3 per cents. at L.176 19 9 $\frac{3}{4}$	L.16,438,175
544,982 in 4 per cents. at 137 18 7 $\frac{1}{4}$	765,428
1,728,617 in 5 per cents. at 118 6 10 $\frac{1}{4}$	2,034,890
<hr/> L.11,567,082	<hr/> L.19,238,493

But the amount of navy bills actually funded, was L.11,595,529; therefore the average rates must have been lower than those the second class.

#### NOTE XVI.—Page 110.

THE loan of L.18,000,000 in the year 1796, (commonly called the *Loyalty Loan*,) was contracted on the following terms: The subscribers of L.100, received a capital of L.112 10s. in a separate fund at five per cent.; and it was agreed that the holders, two years after the ratification of a definitive treaty of peace, should be entitled either to receive payment, or to have their stock converted into three per cents. at the rate of L.133 6s. 8d. for L.100 capital. But this loan is not redeemable on the part of Government, till three years after the other five per cents. be paid.

paid. The subscription was filled up in a few days, the sum funded being L.20,124,848.

This agreement came to be implemented in 1804. The consequent operations were continued for several years ; but these are all introduced in Table II. in the year 1805 : and some portion of this loan has been paid every year since, which payments are all deducted together at the end of the Table.

In consequence of the renewal of the war, the price of the funds was so low, that the holders of the loyalty would have been losers by accepting of L.133 6s. 8d. in the three per cents. It was necessary, therefore, either to pay them, or offer them more advantageous terms.

By act 44 Geo. III. cap. 99. the holders of the loyalty loan were entitled to receive L.100 in the five per cent. consols ; and so much additional in the three per cent. reduced, as would make up the value of L.100, at the current price.

By act 45 Geo. III. cap. 8. the holders of L.4,448,817 were to receive so much capital in the five per cent. consols, or the three per cent. reduced, as would be equal in value to L.100 ; and so much additional capital in the three per cents. reduced, as would be equal to ten shillings more ; and these terms were accepted by the holders of about three-fourths of that sum.

By act 45 Geo. III. cap. 73. the same terms were granted to other holders of the loyalty loan, to the extent of L.1,254,629.

The money required to pay such as did not accept of these terms was obtained by allowing the same terms in the way of loan ; and the capital granted in the five per cents. for every L.100 advanced, as settled by the average price of stock for the ten preceding days, was L.113 13s. 4d.

The holders of the five per cent. annuities, 1802, amount, L.2,227,612, which was joined to the loyalty loan, were entitled to the same terms.

The result of the operations on the Loyalty Loan is as follows :

	Sum transferred from loyalty loan.	Sum added to 3 p. cent. red.	Sum added to 5 per cent. cons.
1804.			
Subscribed into 5 p. ct. cons.	13,263,553	- -	13,263,553
And an additional capital granted in 3 p. cent. red. of	- -	2,716,815	
1805.			
Subscribed into 3 p. ct. red.	2,678,561	2,678,561	
And an additional capital of	- -	1,785,707	
And afterwards a further capital of	- -	245,149	
Subscribed into 5 p. ct. cons.	2,019,661	- -	2,019,661
And an additional capital granted of	- -	- -	265,018
Borrowed in 5 p. cent. cons. to pay off loyalty loan, -	1,005,290	- -	1,005,290
And an additional capital granted of	- -	- -	130,434
	18,967,067	7,426,233	16,683,958
Sum transferred from loyalty loan,	- -	- -	18,967,067
Sum deducted from 5 per cents. by these operations,	- -	- -	2,283,109

NOTE

## NOTE XVII.—Pages 114 and 118.

A METHOD was had recourse to in adjusting the terms of the loan 1802, which indicated considerable pressure on our resources: L.125 was granted in the three per cents.; and as part of the annuities for terms of years expired in 1808, an additional capital was granted to compleat the necessary emolument, the interest of which was deferred till these annuities should expire. Thus the relief in view by the falling in of these annuities, was disappointed to a certain extent. The bidding for the loan was on this deferred stock, and it was taken at L.6 19s. 3d.

## NOTE XVIII.—Page 117.

THE loan of 1807 was raised on Lord Henry Petty's plan, an account of which is given, page 143, &c. L.12,000,000 was charged on the war taxes, and L.1,200,000 of these taxes mortgaged for interest and redemption. The remaining L.200,000 was raised as a supplementary loan in the common manner, with a sinking fund of one per cent. A separate accompt is kept of this loan: But this plan, though intended to be perpetual, was never followed out afterwards.

## NOTE XIX.—Page 119.

THE loan of 1809 was raised at L.60 in the three per cent. reduced, L.60 in the four per cent. cons. and a long annuity of 8s. 10d. L.600,000 of this loan was for Portugal; and instead of distributing that sum among the different funds charged with the general loan, L.895,522 was set aside in the three per cent. reduced, as an equivalent, and a sinking fund of L.30,000 provided for its redemption.

NOTE

## NOTE XX.—Page 119.

AN option was given this year to the holders of the Exchequer bills proposed to be funded, that they might receive either L.103 5s. in the five per cent. cons. or L.81 8s. in the five per cents. and L.26 5s. in the four per cents. A similar option was given next year.

## NOTE XXI.—Pages 105 and 128.

ANNUITIES for lives have been granted at various times, to the amount of L.151,437, exclusive of those which were converted, or entirely fallen in before 1786; generally on single lives; sometimes on two or three lives; and sometimes with the benefit of survivorship. They were reduced by death in 1786, to L.94,878; at which time the present sinking fund was established, and the sums saved by their farther reduction, appointed to be carried to that fund. They were reduced in 1798 to L.87,380; in 1802, to L.81,891; and in 1816, to L.73,397: of which, L.8,195, granted in king William's reign, and probably a considerable sum besides, may be considered as expired. The particulars of the original amount of these annuities; their state at the commencement of the sinking fund; and their present state, are exhibited in the following table.

ACTS.	Original amount.	Expired before 1786.	Remain- ing 1786.	Exp. from 1786 to 1817.	Remain- ing, Feb 1, 1817.
5 Will. and Mary,	22,633	14,438	8,195	- -	8,195
18 Geo. II.	22,500	10,182	12,318	4,039	8,279

## NOTE XXII.—Page 128.

AN account of the allowances for the management of the national debt is given, page 133 and 134. It has been diminished by the reduction of the rate,—by the falling in of annuities,—  
the

the redemption of the capital by the sinking fund,—and the transference for land tax. It was thought unnecessary to introduce the portions of abatement in the statement of each year's charge, and the whole is deducted at the end of Table II.

NOTE XXIII.—Page 140.

THE interest, &c. of all the debt, whether existing at the establishment of the consolidated fund, or contracted since, as well as the civil list, and other parliamentary grants, are charged on the consolidated fund; and it is credited with all the taxes in force at its commencement, or imposed since, applicable to these purposes. But in the accounts of the consolidated fund lately reported to Parliament, the charges on the loans for ten years, or thereby, preceding, are placed against the branches of revenue appropriated to each. In the earlier parts of the accounts, they are placed promiscuously.

The interest, &c. of the loan 1803, is charged on £.250,000 reserved out of the consolidated customs; £.59,965 from the consolidated stamp duties; and a variable sum from the assessed taxes.

The interest, &c. of the loan 1804, is charged on the consolidated stamp duties, which were augmented by a duty on the transfer of property according to its value.

The interest, &c. of the loans 1805, is charged on consolidated stamp duties and customs, to which certain additions were made; on additional postage; additional duty on horses; and additional excise on salt, auctions, bricks, coffee, cyder, glass, vinegar, and wine.

The interest, &c. of the loan 1806, is charged on additional duties on wine and spirits; an addition of ten per cent. on assessed taxes; and a small charge on the stamp duties.

The interest, &c. of the loan 1807, is charged on the war taxes, agreeably to Lord Henry Petty's system.

The interest, &c. of the loans 1808, is charged on additional assessed taxes and stamp duties. The short annuities, now fallen in, and savings by the reduction of the rate of management, were brought in aid of this year's charge.

The interest, &c. of the loans 1809, was charged on the war taxes, except an allowance of L.105,000 from the consolidated customs.

The interest, &c. of the loans 1810, was charged on the surplus of stamp duties, produced by their increase and consolidation.

The interest, &c. of the exchequer bills funded in 1811, was charged on additional duties on spirits; and that of the loan, on the war taxes: to replace which, additional duties were imposed on timber, ashes, and foreign linen, and added to the war taxes.

The interest, &c. of the debt contracted 1812, was charged on additional assessed taxes; additional duties on glass, hides, tobacco, and snuff; and additional postage.

The system of finance adopted in 1813, held forth an exemption from additional taxes for several years, the charge of the loans being compensated by cancelling part of the redeemed stock: But, as a sum was required to be added to the sinking fund at the commencement of that system, additional permanent customs were imposed that year to a considerable extent. No taxes were imposed in 1814. In 1815, the surplus arising from additional stamp duties, and excise duties on tobacco and licences, then imposed, were appropriated to defray part of the charge of the loan of that year; and in 1816, additional duties on soap, foreign butter and cheese, and the saving by the diminution of the drawback on sugar, and interest on exchequer bills, were appropriated for the charge of the money borrowed from the Bank, that year.

## NOTE XXIV.—Page 142.

THE term of forty-five years was mentioned when the one per cent. sinking fund was announced, as that in which each loan would be repaid at furthest. The actual term depends upon the rate of interest, and the comparative prices of stock when the debt is contracted, and during the period of its redemption.

Supposing the sinking fund 1-100th of the sum borrowed, the periods required for redemption are,

At 3 per cent. interest,	-	47 years.
At $3\frac{1}{2}$ per cent.	-	44 years.
At 4 per cent.	-	41 years.
At 5 per cent.	-	37 years.

If the sinking fund be 1-60th of the sum borrowed, the periods required for redemption are,

At 3 per cent.	-	47 years.
At $3\frac{1}{2}$ per cent.	-	40 years.
At 4 per cent.	-	$35\frac{1}{2}$ years.
At 5 per cent.	-	29 years.

## NOTE XXV.—Page 152.

To place the sinking fund proposed on the loans, upon Mr. Vansittart's plan, in a clear point of view, we shall detail its application to the financial operations of the year 1813.\*

	Sums borrowed.	Capitals funded.
Exchequer bills funded at L.115 10s. in 5 per cents.	12,000,000	13,860,000
Ditto funded at L.139 in 4 per cents.	3,755,700	5,220,423
Loan funded at L.170 in 3 per cents.	21,000,000	35,700,000
	36,755,700	54,780,423
Estimated sum applicable to the discharge of the national debt, 1st February, 1813,	13,013,914	
Additional debt contracted,	23,741,786	

o o 2

The

\* See act 53, Geo. III, cap. 95.

The sinking fund to be provided on the former is 1 per cent. on the funded capital, and on the latter, one half of the interest.

The charge on the former part is,

funded for

Ex. Bills, L.12,000,000	L.13,860,000	Interest,	L.693,000

3 per cent. reduced,	47,892,500		
	<hr/>		
	L.94,777,100	Interest,	L.2,843,313
	<hr/>		<hr/>
Difference, not accounted for,	-	-	L.1,771
			<hr/>

(For the progress of this system afterwards, see Appendix II. Table XI.)

NOTE XXVI.—Page 155.

THE terms for the purchase of the land tax, now offered, are the following, in option of the purchaser.

1st. Transfer of stock at one time, or by four instalments in two years.

2d. Payment of money at like periods, the amount being regulated by the current price of stock.

3d. Transfer of stock in sixteen years, by two instalments each year.

4th. Payment of money at the like periods, and to the like amount.

5th. Land tax on houses may be redeemed at 18 years purchase, to be paid within three months.

6th. Land

6th. Land tax on lands not exceeding L.10, may be redeemed by a double assessment of land tax for 18 years.

7th. By a double assessment of land-tax, until the quantity of stock purchased therewith, and the dividends and interest accruing thereon, be sufficient for the redemption of the land tax ; giving the proprietor the benefit of accumulation at compound interest. This mode, at the present price of stock, will redeem the land tax in 14 years.

NOTE XXVII.—Page 159.

THE inequality of the funded debt contracted in different years is remarkable. The expense was much greater in some years than others ; but the inequality is partly to be accounted for from the loans having sometimes been made near the end of the year, and applied to the service of the following year ; and also, from the increase or diminution of the unfunded debt.—The debt contracted annually, after the renewal of the war in 1803, was less than in the former war, owing to the large sums raised by war taxes and otherwise, within the year. It is remarkable that the debt redeemed in 1808, before reduction to three per cent. is greater than the debt contracted. But part of the debt was contracted in the 4 and 5 per cent. stocks, and that redeemed was all in the 3 per cents. ; so that a less sum of money was laid out in the redemption than the amount of the loans and funded bills.

The increase of the public debt for Britain, in 1812, may be thus estimated.

		Reduced to 3 per cents.
L. Funded in 5 per cents.	L.5,866,236	L.9,777,060
M. Funded in ditto, -	7,832,795	12,231,325
N. Funded in 3 per cents. -	-	27,544,000
		<hr/>
		L.49,552,385
Increase of unfunded debt,	3,800,637	6,334,395
		<hr/>
Carried forward, -	-	L.55,886,780
		Redeemed

Brought forward,	-	L.55,886,780
Redeemed by sinking fund in 3 per cents.		20,922,876
<hr/>		
Addition to public debt, estimated in 3 per cents.		L.34,963,904
and estimated in 5 per cents.	-	20,978,342
And the increase in other years may be estimated in the same manner.		

## NOTE XXVIII.—Page 198.

WE have repeated this calculation at each of our editions, according to the state of finance at the time. On the 1st February 1812, the loss by the sinking fund appeared to be L.10,861,688; on the 1st February 1813, L.12,585,580; and now, on the 1st February 1817, L.16,450,661. In this last calculation, we have deducted the sums expended, and capital redeemed, before the war, from the whole sums expended and redeemed since the commencement of the sinking fund. This was not done in our former editions.

## NOTE XXIX.—Page 203.

THE sums inserted in our last edition were taken from a Return to the House of Commons, in which the hereditary revenue, and some other articles, were included with the taxes; and the expense of management deducted, as mentioned in a note annexed to that passage. The sums of taxes now given, from 1803 to 1814, inclusive, are taken from an accurate statement compiled by Charles Stokes, Esq. from accounts presented to the House of Commons, in which nothing extraneous is blended with the taxes, and nothing deducted except drawbacks, and bounties in the nature of drawbacks. The sums for the two last years are compiled in the same manner.

NOTE

## NOTE XXX.—Page 207.

THE high encomiums bestowed upon Mr. Pitt's sinking funds, rendered it necessary to enter into a full discussion of their merits.

"To the consolidated fund the country has looked for the interest of its debt; and for its extinction, to the sinking fund. The best eulogium that could be made on the sinking fund, was the plain statement he had made. *There could be but one opinion in the House on the subject. It was owing to the institution of the sinking fund that the country was not charged with a much larger amount of debt. IT WAS AN ADVANTAGE GAINED BY NOTHING, and a system likely to be attended with still greater advantages. Therefore, independent of considerations of good faith, which should induce the House to hold and cling to a system once adopted, it was pledged to support it, having positive trial and experience of its utility*"—(*From Lord Henry Petty's Speech at opening the Budget, 29th March, 1806, as reported in the Newspapers at the time.*)

"On the same principle which guided the determination of Parliament in 1786, another act was passed in 1792, which provided, that on all future loans, a surplus of one per cent. per annum on the capital, should be raised for the redemption of the capital. *This was an idea conceived in the spirit of inflexible integrity and economy, of which nations rarely afford an example, though, like the same virtues in private life, it is calculated to promote, in the highest degree, their prosperity.*"—(*Examination into the Increase of the Revenue, from 1792 to 1799, by George Rose, Esq.*)

Quotations of a like kind might be adduced to a large extent.

NOTE

## NOTE XXXI.—Page 217.

IN Mr. Rose's Examination into the Increase of the Revenue, &c. 1799, a table is given of the money borrowed, and capital debt contracted since the commencement of the war, in which the loan of 1798 is stated at nine millions, with a corresponding capital, and the columns summed accordingly. He adds, indeed, in a note, that "the loan of 1798 was for 17 millions; but the charge on the consolidated fund was only for nine millions, as the remaining eight millions is to be supplied from the aid and contribution tax, in purchasing stock to the extent of the capital created by that sum."

Did he believe, or did he expect his readers to believe, that this part of the loan, which he endeavours to keep out of view, was less a burthen on the public, because it was then proposed to discharge it by a certain tax to be levied on the public;—an arrangement which was soon after relinquished?

## NOTE XXXII.—Page 226.

IN the first part of Table X. which exhibits the progress of taxation, and of the sinking fund on Mr. Vansittart's plan, compared with that of the former system, the years marked on the margin are higher by one, than in the outlines, Table A. 1.; because the taxes imposed, suppose in 1813, can hardly become effectual before the 1st August of that year; and, therefore, their produce the first year, or from 1st August 1813, to 1st August 1814, ought to be set in opposition to the produce of the sinking fund during the same time.

## NOTE XXXIII.—Page 248.

IN our former editions, we ventured a conjecture, founded on the abovementioned fact, that the 3 per cents. on the restoration

P p

tion

tion of peace, might rise to 80. They have now risen to a higher value, and are at present (January, 1818,) about 82. We shall not at present speculate upon the causes of their rise, or the height they may afterwards reach. As it does not affect the general reasoning, we did not think it necessary to alter the hypothetical rate we had used before in this calculation. It is obvious, that if we substitute a higher rate, the loss resulting will be greater.

NOTE XXXIV.—Page 250.

IN order to support the value of the five per cent. stock, it was enacted in 1786, that it should not be redeemable till 25 millions of the three per cents. were paid off with money applicable to the redemption of the public debt. This restriction is now removed by the condition being fulfilled. The loyalty loan is not redeemable at par till the expiration of three years after the consolidated five per cents. are paid off.

# APPENDIX I.

---

## SECTION I.

### ACCOUNT OF THE STOCKS.

THE term *Fund* properly signifies any sum of money, or annual revenue, appropriated to a particular purpose. Thus, the part of the revenue which is set aside for the payment of the national debt is called the *Sinking Fund*. But when we speak of the funds, we generally mean those large sums which have been lent to Government, and constitute the national debt, and for which the lenders or their assignees receive interest from the public revenue. These persons are said to invest their money in the funds. The term *Stock* is used nearly in the same sense, and is also applied to the sums which form the capital of the Bank of England, the East India and South Sea Company, and other public companies, the proprietors of which are entitled to a share of their respective profits.

The funds which at present constitute the public debt, or are connected with it, are,

*Bank Stock.* The Bank of England was incorporated in 1694. Their original stock, raised by subscriptions, not exceeding L.20,000 in one name, was L.1,200,000, which was lent to Government at 8 per cent. interest, and L.4000 allowed for the expense of the house, amounting together to L.100,000. In the year 1709, the Bank advanced L.400,000 more to Govern-

ment, without additional interest, after the two first years, which reduced the interest received by them to 6 per cent. They afterwards advanced various sums to Government, by withdrawing Exchequer bills, or otherwise, until the permanent debt due to them amounted, in 1746, to L.11,686,800, at which it has remained till lately. The rate of interest has been gradually reduced, and is now 3 per cent. Besides this permanent debt, the Bank has been long in the practice of assisting Government, by advancing money on Exchequer bills, in anticipation of the land and malt taxes, and now of the annual taxes substituted for the former ; by payment of bills drawn on the treasury, and otherwise, to a great extent. The stock of the Bank has been enlarged, at a rate nearly keeping pace with their advances to Government, but not exactly the same : The sum upon which they divided, till lately, was L.11,642,400.

The first term of the charter of the Bank was only to the year 1705, and it has since been extended from time to time, being liable to dissolution at the term specified in each charter, upon twelve months notice, and repayment of the money advanced, by Government. It is also provided by the various loan acts, that the Bank shall remain an incorporation after the term specified in the charter, for the purpose of transacting the business of these loans, till they be redeemed.

In the year 1800, at which time their charter stood extended to 1812, it was agreed, upon the advance of L.3,000,000 by the Bank to Government for six years without interest, to prolong their charter till the end of twelve months notice, after 1st August, 1833 ; and, in 1806, it was agreed to continue this advance till six months after the conclusion of a definitive treaty of peace, at 3 per cent. interest. This debt was paid off in 1814.

In 1808, a further advance of L.3,000,000 was agreed to be made by the Bank, without interest during the war, in consideration of the large deposits of public money made in their hands, the average of which was estimated to exceed ten millions.

lions. Since the restoration of peace, this advance has been continued, and is at present extended to 5th April, 1818.

The practice of depositing money in the Bank, for payment of the dividends to the public creditors, is of long standing; and, after the establishment of Mr. Pitt's sinking fund, the money placed at the disposal of the Commissioners was deposited in the Bank at the commencement of each quarter. The amount of these deposits increased as our financial system expanded, and was much enlarged by the regulations established in 1806, of depositing all public money, so far as practicable, in the Bank, in consequence of malversations in office, detected at that time. The average amount of these deposits since 1806 has been estimated at eleven and a half millions, and supposed to yield a profit of 5 per cent. Admitting these suppositions, the profit accruing to the Bank, from the deposit of public money, will stand thus:

From 1806 to 1808, interest on eight millions and a half, at 5 per cent.	"	"	"	L.425,000
And on three millions lent to Government, at 3 per cent.	"	"	"	90,000

---

Annual profit,	"	"	"	L.515,000

The

The last transaction between the Bank and Government was in 1816. The Bank agreed to continue the advance of three millions, without interest, to April, 1818; and to advance three millions, at 3 per cent. interest, to be repaid, at furthest, before August, 1833. They also agreed to advance six millions more, on Exchequer bills, at 4 per cent., for two years certain; and for three years more, subject to repayment during that period, upon six months notice, either by the Treasury or the Bank. In consideration of these stipulations, they were authorized to make an addition of one-fourth to their former capital; to be placed to the credit of the proprietors of Bank stock, from the undivided profits.

Their former stock was	-	-	L.11,642,400
Addition of one-fourth,	-	-	2,910,600
<hr/>			
Their present stock is	-	-	L.14,553,000
<hr/>			

In 1797, the unfavourable rate of foreign exchange occasioned such a demand for specie, as had nearly exhausted their treasure; and, upon application to Government, an act was obtained, restraining them from making payment in cash: at first for a limited time, afterwards continued during the war, and now prolonged to July, 1818, when the restriction is proposed to be removed.

The quantity of Bank notes in circulation has been much increased since the restriction. At that time, it amounted to between 11 and 12 millions, but went on afterwards gradually increasing, and in June, 1815, amounted to L.31,300,000; and the average amount for the two last years has been about L.27,000,000.

This great increase of circulation may be attributed to the following causes; first, the removal of the prudential restraint they were formerly under, from making large issues by discounting bills, or otherwise, arising from the risk of their being returned in demand for cash; secondly, the permission, granted

ed at the same time the restriction was imposed, of issuing notes under L.5, which had been formerly prohibited. A circulation of such notes was then wanted, by reason of the scarcity of specie; and their amount for some years past has been about nine millions.

The Bank also advanced to Government L.376,739 in 1791, and afterwards L.500,000 more in 1808, without interest, in consideration of the large sum of unclaimed dividends on the public funds always remaining in their hands.

The dividend on the Bank stock at its establishment in 1694, was 8 per cent. In 1697, it rose to 9 per cent., but soon afterwards fell, and varied from 6 to  $5\frac{1}{2}$ , and 5 per cent.; and in 1754 fell so low as  $4\frac{1}{2}$  per cent. In 1788, it rose to 7 per cent. and in 1807, to 10 per cent., at which rate it has continued since. The dividends are payable on the 5th April and 10th October.

In the interval between 1788 and 1807, the following *bonuses* were paid to the proprietors of Bank stock, over and above the usual dividend of 7 per cent. from the surplus profits.

Ladyday, 1799, L.10	0	0	0	per cent in the loyalty loan.
Ladyday, 1800,	5	0	0	in the navy 5 per cents.

Admitting the accuracy of this statement, some alterations have taken place since, in consequence of the repeal of the property tax, and the arrangements of 1816.

*South Sea Stock.* We have already had occasion to notice (pages 71, 72,) the origin of the South Sea Company, and their first transactions with Government; also, (pages 79, 80, 81,) their extensive undertakings in 1720, the failure of their expectations, and the arrangements which took place in consequence. The only branches of trade in which this Company ever engaged, were that of conveying slaves to the Spanish colonies, and the whale-fishery; and these being attended with loss, were abandoned. Since 1748 they have carried on no trade whatever. Their stock has since undergone various modifications, and has been considerably reduced by payments from Government, and the rate of interest has sustained the same reductions as in the other public funds. It is at present distributed into the following branches:—

A sum, considered as the trading capital of the Company, though they have long ceased to trade. This was fixed, in 1733, at L.5,662,784, and has remained invariable since. The dividend received by the proprietors of the stock is  $3\frac{1}{2}$  per cent., of which 3 per cent. is paid by Government, and the remaining half per cent. by the Company. This they were enabled to make, from fines to which they are entitled from ships trading within the bounds of their charter, and the allowance received from Government for management. This article amounted, in 1786, to about L.15,000, but is since reduced, in consequence of the redemption of part of the capital under their management.

By act 55 Geo. III. cap. 57, the exclusive privileges of the South Sea Company are repealed; and, as a compensation, a guarantee fund of L.610,464 is appointed to be invested in some 3 per cent. stock; being raised from a duty of 2 per cent. on all goods imported from places within the limits of their charter, except the produce of the fisheries, and of 1s. 6d. tonnage duty on ships trading to these places. This fund, till completed, is under the management of the Commissioners for the reduction of the national debt; and is to be transferred, when

completed, to the South Sea Company, when it will afford a dividend equal to one-half per cent. on their stock. In the mean time, a sum is annually allowed them from the consolidated fund, sufficient to enable them to make the accustomed dividend of one-half per cent.

*Old South Sea Annuities.* These were separated from the other funds of the Company in 1723, when they amounted to L.16,901,099, bearing interest at 5 per cent., reduced in 1727 to 4 per cent., in 1751 to  $3\frac{1}{2}$  per cent., and in 1757 to 3 per cent. Part of the capital being paid off at different times, it was reduced in 1775 to L.11,907,470, at which it remained till Mr. Pitt's sinking fund was established in 1786.

*New South Sea Annuities,* separated from the other funds of the Company in 1733, when they amounted to L.10,988,318, bearing interest at 4 per cent. The capital was reduced in 1775 to L.8,494,830, and the interest has undergone the same reductions as that of the old annuities.

*Three per cent. Annuities,* 1751, are also under the management of the South Sea Company. This fund consisted originally of L.2,100,000, borrowed for the purpose of paying off those holders of South Sea annuities who did not consent to the reduction of interest which took place at that time. It was reduced in 1775, by payments at various times, to L.1,919,600.

A considerable part of these three last mentioned funds has been redeemed since 1786.

The dividends on the South Sea stock, the new South Sea annuities, and the 3 per cents. 1751, are payable 5th January and 5th July; those on the old South Sea annuities, 5th April and 10th October.

*Three per cent. Reduced Annuities.* This fund commenced in 1749, and was then formed of various articles of public debt which formerly bore a higher rate of interest, from which circumstance it derived its name. But many additions have been made to it by subsequent loans, which never bore interest at  
any

any other rate. The dividends are payable 5th April and 10th October.

*Three per cent. Consolidated Annuities.* This is the largest of all the public funds. It commenced in 1731, but derived its present name from the consolidating act in 1751, being formed by the union of several capitals formerly kept separate. Many additions have since been made to it. The dividends are payable 5th January and 5th July.

*Three per cent. Annuities, 1726.* This fund consists of L.1,000,000 borrowed by lottery in that year, for the discharge of Exchequer bills issued for paying the arrears of the civil list. The interest was at first charged on a duty of 6d. per L.1 on pensions, but it is now paid from the consolidated fund; though the fund itself, for reasons which do not appear, is still kept separate. The dividends are payable at the same terms as those of the 3 per cent. cons.

A fund bearing interest at  $3\frac{1}{2}$  per cent., irredeemable for 15 years, was established in 1756, but it was paid off at the end of that term. A similar fund was established in 1758, irredeemable for 24 years; but at the end of that term it was united to the 3 per cent. consols.

*Four per cent. Consolidated Annuities.* This fund commenced in 1760; but L.23,500,000 borrowed on it, in that and the following years, being paid off, or the rate of interest reduced, the earliest article now belonging to it is a loan of L.5,000,000, in 1777, to which various other loans, or parts of loans, have since been added. The dividends are payable at the same terms as those of the 3 per cent. reduced.

*Navy five per cent. Consolidated Annuities.* This stock commenced in 1784, and was first applied for funding the navy, victualling, and transport bills, then in circulation, from which it derived its name. It has since received many additions, chiefly by funding Exchequer bills. The dividends are payable at the same terms as those of the 3 per cent. cons.

*Loyalty Loan, or five per cent. Annuities, 1797 and 1802.* An

q q 2

account

account of this fund is given in Note XVI. The dividends are payable at the same terms as those of the 3 per cent. reduced.

*Imperial three per cent. Annuities.* An account of this fund is given, pages 132, 133. The dividends, though due November 1st and May 1st, are not paid till January and July.

*Irish five per cent. Annuities,* are not guaranteed by Britain, but transferable at the Bank of England, and the dividends payable there on the 25th March and 25th September.

And the terminable annuities are,

*Annuities on Lives.* The amount of these, standing in the books of the Exchequer, including tontines, on the 1st February, 1817, was L.73,397; but a considerable part had not been demanded for upwards of three years, and is probably expired. They are payable at the Exchequer, half yearly, on the 5th January and 5th July, and are transferable by assignment indorsed on the order, which must be registered at the Exchequer. Any person receiving an annuity, knowing the nominee to be dead, forfeits L.500, and treble the sum received. See Note XXI.

*Long Annuities.* These terminate on the 5th January, 1860, and are now payable half yearly, at the Bank, on the 5th April and 10th October. The amount on the 1st Feb. 1817, was,

British,	-	-	-	-	L.1,224,961

## SECTION II.

### OF THE EAST INDIA COMPANY.

THE affairs of the East India Company have been, and still are, so much blended with the public revenue, that some account of their progress and present state belongs to the subject of our inquiry.

This Company presents a singular example of a mercantile society commencing on slender funds, and gradually expanding, but not assuming for a century and a half any great political importance ; and afterwards acquiring the sovereignty of a mighty empire, exceeding the British Isles in extent and population, perhaps in wealth ; still remaining in compleat subjection to the parent state, without contributing much, at least not directly, to the public revenue.

The first charter was granted by Queen Elizabeth, in 1600, and conferred the exclusive privilege of trade to all countries, from the Cape of Good Hope to the Streights of Magellan, for fifteen years. Their original capital was only L.72,000, in shares  
of

of L.50 each ; and it was not formed into a joint stock for some years after, and for a long time their exertions were feeble. In the reign of James I. they received a new charter, and their stock was enlarged. The Company was dissolved during the usurpation of Cromwell in 1655, and the trade laid open to the public ; but this being attended with inconveniences, it was re-established about three years after, at which time their nominal stock was L.739,782, whereof only one half, or L.369,891, was paid up, and was properly their trading capital. In the subsequent period, the renewals of their charter were frequent, there being no fewer than six between the Restoration and the Revolution, and three between the Revolution and 1698. These charters conferred sovereign power. The Company had been invested with criminal jurisdiction by the charter of James I. They were now authorized to possess all plantations, forts, and factories, in the East Indies, and erect new fortifications there, and at St. Helena, *and to make war or peace with any prince or people that were not Christians.* The other charters were chiefly granted for enlarging their powers to suppress interlopers. In 1693, a tax of 5 per cent. was imposed on their stock, which at that time amounted to L.744,000, and their charter was forfeited for nonpayment, but was immediately restored. These charters were not limited in point of time, but reserved a power of dissolving the Company upon three years intimation, if its privileges should be found prejudicial to the public.

A new East India Company was established by king William, in 1698, which advanced L.2,000,000 to Government, at 8 per cent. interest. Their right of trade was to continue till 1714, after which they might be dissolved upon three years notice, and repayment of the money due by the public ; and a similar clause was inserted in all the subsequent charters. In 1702, the two Companies were united, and, in 1708, the united Company lent a further sum of L.1,200,000 to Government without interest, which reduced the rate of interest to 5 per cent. upon which their charter was prolonged to 1729. In 1712, it was further  
prolonged

prolonged to 1736, and again in 1730, to 1769, on which occasion the Company gave L.200,000 to the public revenue, and agreed to the reduction of the rate of interest on their debt to 4 per cent. The next prolongation of their charter took place in 1743, when they advanced L.1,000,000 to Government at 3 per cent. interest, and obtained an extension to 1783. When a general reduction of the interest on the public debt took place in 1749, the interest of the whole debt of L.4,200,000 due to the Company was reduced to 3 per cent. and they were empowered to borrow by the sale of annuities to that extent, and did borrow L.2,992,440 accordingly. The debt due them by the public remained in this state as a separate fund till 1793, when it was joined to the 3 per cent. reduced stock. The annuitants on the Company agreed to accept of 3 per cent. reduced stock in exchange for their annuities, and the Company themselves became holders in that stock, to the extent of L.1,207,560, being the residue of the debt of L.4,200,000. This is the only debt now due by the public to the Company.

The dividends of this Company, arising from the profits of trade, have been variable, and the value of their stock exposed to greater fluctuation than that of any other of the other public funds. Previous to 1757, although invested, in some measure, with sovereign power, their possessions in India were limited to forts and factories, with a small contiguous territory: But soon after that time, in consequence of the conquests made by Lord Clive and others, they acquired extensive dominions, which they held at first by dependent Nabobs, whom they raised and removed at pleasure, but afterwards assumed into their immediate possession. From these dominions they drew an ample revenue, which soon attracted the attention of Government, as an object in which the public had a right to participate. An agreement was made in 1767, that the Company should pay L.400,000 annually for two years, and in 1769 it was extended for five years more, as a consideration for being permitted to retain the revenue of their acquired territory. The Company, however,

however, have been so often engaged in expensive wars with the native powers, that the prospect of deriving a revenue to Britain from their possessions was never realized for any length of time. In 1773, they were not only unable to make the stipulated annual payment, but were obliged to apply to Government for a loan, and received one of L.1,400,000, their dividends being limited to 6 per cent. till it should be repaid. This debt was paid up in 1777, and the restriction on their dividends of course removed.

In 1781, a new agreement was made with the Company. A payment of L.400,000 made that year was accepted of, in discharge of all former claims; their exclusive privileges were extended to 1794; and, their dividends being at that time 8 per cent. it was stipulated that three-fourths of their surplus profits should be appropriated to the public service, and the other fourth retained by the Company for the enlargement of their dividends; which, however, were not to be increased above one per cent. in any year, and never to exceed  $12\frac{1}{2}$  per cent. The public never derived any revenue from this agreement; for, in the following years, the nett profits of the Company did not amount to 8 per cent., and their affairs fell under such embarrassment, that Government was induced to postpone the payment of customs due by them, and also to issue Exchequer bills to the amount of L.300,000, upon which the Bank advanced money, for their relief.

By an act passed in 1784, the Board of Commissioners for the affairs of India, generally called the Board of Controul, was established, to whose orders the Directors of the East India Company are subject, in all matters of civil and military government, and who have also the power of regulating the administration of their territorial revenue; and "*whereas schemes of conquest and extension of dominion in India are measures repugnant to the wish, the honour, and the interest of this nation,*" the Governor-general was prohibited from commencing hostilities, or entering into any treaty for making war against any of the princes of the country.

country, unless hostilities have been committed, or preparations made for hostilities against them or their allies. The history of the succeeding thirty years will shew how far the conduct of Britain to the native powers of India has been conformable to this excellent principle.

At the next renewal of their charter, in 1793, the exclusive privileges of the Company underwent some restrictions. Every British subject was permitted to export any goods, except military stores and copper, to India, but not to China; and the civil servants of the Company, and merchants residing in India under their protection, were permitted to import any goods, except piece goods of cotton and silk, on board the Company's ships to London; and for these exports and imports in private trade, the Company was obliged to appropriate 3000 tons of shipping, at L.5 per ton outwards, and L.15 inwards, of freight, in time of peace, with an addition in time of war. Under these limitations, their exclusive privileges were extended to 1st April, 1814. The full extent abovementioned of tonnage for private trade outwards has never been required.

The clear profits of the Company were directed to be applied as follows; 1st, in payment of 10 per cent. dividend on their stock, besides one half per cent. more, eventually, from a separate fund; 2d, in payment of L.500,000 annually of bills drawn from India for the liquidation of the debt due by the Company in that country; 3d, in payment of L.500,000 annually to the Exchequer for the public service. The surplus after these payments to be applied to the further discharge of the debts in India, till it should be reduced to two crores of rupees, or nearly two millions sterling; and of the bonded debt in England, till it should be reduced to L.1,500,000; after which one-sixth of the surplus profits was to be applied to the augmentation of the dividends, and the remaining five-sixths to be paid into the Bank of England, to be placed to the account of the Commissioners for the reduction of the national debt, till it should amount to 12 millions, (which sum was to be a guarantee fund

for securing the stock and dividends of the Company); and when that fund was completed, the foreshaid five-sixths of surplus profits was to be paid into the Exchequer, as the property of the public. The abovementioned payment of L.500,000 to the Exchequer, has not been made since April, 1794. It is unnecessary to add, that the guarantee fund has never been made up; and, consequently, that the public have never participated of any surplus profits. In 1812, the embarrassed state of the Company's affairs obliged them to apply again to Government for aid; and, accordingly, a loan of L.2,500,000 was granted to them, joined to the loan of that year.\* The sum funded for this was L.4,400,000 in the 3 per cents.; and the Company was bound to pay into the Bank of England, besides the interest and charges of management, L.110,820 as a sinking fund for the discharge of the principal, being about  $2\frac{1}{4}$  per cent. on the funded capital. The sum redeemed, 1st February, 1817, was L.900,523.

The charter being on the eve of expiring in 1813, the object, so long contended for, of laying the trade to India open to the public, was at last, in a great measure, obtained. By act 53 Geo. III. cap. 155, permission is granted to every British subject to trade to India, but not to China, both in export and import, after 10th April, 1814. This trade, however, is subjected to various regulations, the most important of which are: That no vessel shall proceed on private trade, to India, without a licence from the Directors, which shall be granted, on application, of course, to the principal settlements of Fort-William, Fort-George, Bombay, or Prince of Wales Island; but no vessel may fit out to other places, unless specially authorized; and in case the Directors refuse to grant such special licence, the Board of Controul shall ultimately determine in regard to the same: That no vessel under 350 tons shall be employed: That goods imported in private trade shall be brought to some port in the  
United

\* See page 123, A.

United Kingdom, which shall have been declared fit for that purpose by order in Council: That the importation of articles of silk and cotton manufacture, for home consumption, shall be confined to the port of London, and the goods deposited in the Company's warehouses there: And the importation of tea, in private trade, is prohibited without licence from the Company.

The Company retain, till 10th April, 1834, the government and revenue of their territorial acquisitions, subject to the regulation of the Board of Controul, and the exclusive trade to China, and may trade as a corporation to India, in common with his Majesty's other subjects.

The same hopes of procuring a revenue to the public, which have so often before proved delusive, are still held forth. The enactments for the distribution of their territorial and commercial revenue are nearly the same as at the renewal of their charter in 1793. Their commercial profits are to be employed, 1st, in payment of bills of exchange; 2d, in paying debts, (the principal of the bond debt in England excepted,) and commercial charges; 3d, in payment of a dividend of  $10\frac{1}{2}$  per cent. on their capital; 4th, in the reduction of their bond debt. No annual payment to Government, except the interest and sinking fund of the loan of 1812, is required. The territorial revenue in India is applicable for the civil and military charges in that country, the payment of the interest, and liquidation of the Indian debt, and of the bond debt at home; and when the Indian debt is reduced to 10 millions, and the bond debt to 3 millions, then the surplus revenue, both territorial and commercial, shall be paid into the Exchequer, and applied, in the first place, for raising a guarantee fund of twelve millions; and when that fund is completed, one-sixth of the surplus shall belong to the Company, and the other five-sixths become the property of the public.

The progress and present state of the stock of the Company is as follows :

	Capital.		Sums advanced.
1708,	L,3,200,000	at 87½ per cent.	L-2,800,000
1786,	800,000	at 155 per cent.	1,240,000
1789,	1,000,000	at 174 per cent.	1,740,000
1793,	1,000,000	at 200 per cent.	2,000,000
	<hr/>		<hr/>
	L-6,000,000		L-7,780,000
	<hr/>		<hr/>

In 1797, an act was passed authorizing the Company to augment their capital by L-2,000,000 ; but this has not yet been carried into execution.

The dividends on India Stock have been as follows :—

Ladyday,	1709,	5 per cent.
Michaelmas,	1709,	8 per cent.
Michaelmas,	1711,	9 per cent.
Christmas,	1716,	10 per cent.
Midsummer,	1722,	8 per cent.
Christmas,	1732,	6 per cent.
Midsummer,	1733,	7 per cent.
Christmas,	1755,	8 per cent.
Christmas,	1766,	6 per cent.
Midsummer,	1767,	10 per cent.
Midsummer,	1769,	11 per cent.
Midsummer,	1770,	12 per cent.
Midsummer,	1771,	12½ per cent.
Christmas,	1772,	6 per cent.
Christmas,	1776,	7 per cent.
Midsummer,	1778,	8 per cent.
Midsummer,	1798,	10½ per cent.

And they have continued at that rate since.

Additional regulations of the trade to the East Indies have been established by acts 54 Geo. III. cap. 34, 35, 36 ; and 55 Geo. III. cap. 10, 32, 93 ; and 57 Geo. III. cap. 36, 95, 120.

A grant of L.2,000,000 was made to the East India Company in 1813, and another of L.917,705 in 1816, to defray the expenses incurred by them in the public service.

*India Bonds.* The Company owes a large sum on transferable bonds, generally of L.100 each, the rate of interest on which has frequently varied, and is at present 5 per cent. payable twice a-year, on the 31st March and 30th Sept. Government have several times interfered to restrict the amount of this debt. In 1773, their dividend was limited to 7 per cent. till their bond debt was reduced to L.1,500,000; and this was effected in 1778. Being afterwards enlarged to L.3,200,000, they were again required to restrict it to L.1,500,000, as a condition of the increase of their capital; but this reduction was not completed, and this debt has been enlarged since, with consent of the Board of Controul, occasioned partly by the transference of part of the debt due by the Company in India, to Britain. These bonds are received by the Company as cash, when there is six months interest due on them, and are a very marketable security, generally bearing a premium, being very convenient to be kept by merchants or public companies to answer exigencies. When sold, the interest to the day of sale, together with the premium, is added to the sum of the bond, and paid by the purchaser.

## SECTION III.

### MANNER OF TRANSACTING LOANS.

IN the early part of the funding system, the subscription for loans was taken at the Exchequer ; but, since 1714, they have been transacted at the Bank of England ; and this was formerly done by open subscription. Terms were proposed to the public, and as these were calculated to afford a profit, the subscription was generally filled up in a short time. If the terms were not judged sufficient, and consequently the subscription not filled up, others more advantageous were offered afterwards.

For a considerable number of years, a mode of transacting loans still more favourable to the public has been adopted. The Chancellor of the Exchequer fixes upon the funds in which the loan is to be made. These are often of different kinds, and not unfrequently a long annuity forms part of the emolument. He then gives public intimation that he will be ready, on a certain day, to receive offers, and assign the loan to those who are willing to accept of the lowest terms. If a long annuity be a part of the proposed emolument, the other funds to be assigned to the lenders are fixed at a rate somewhat lower than the estimated value for each L.100 borrowed, and the bidding is on the long annuity, the loan being granted to those who will accept of the least annuity in addition to the capital offered. If the loan be in different funds, but without an annuity, the capitals in all the funds except one are previously fixed ; and the bidding is on that fund, the loan being granted to those who will accept of the least capital. The Chancellor of the Exchequer is generally attended, at the time appointed, by several of the principal bankers in London, who deliver their offers, having previously made up a list of persons who are willing to share with them to a certain extent, in case their offer be accepted ;

cepted ; and the loan is assigned to the offerer who proposes the lowest terms. This method, since its adoption, has been generally conducted with impartiality, and, being a fair and open competition for the public benefit, has been uniformly ratified by Parliament. The only deviation from it, since its first adoption, was in the loan of 1796, called the Loyalty Loan, when the method of open subscription at the Bank was had recourse to. In the loan of November, 1813, a preference was given to the contractors of the former loan ; and, indeed, whenever a new loan has been contracted prior to the last instalment of the preceding loan, it has been usual to give the preference to the contractors of such preceding loan.

The loans are always payable by instalments at different periods of the year. But the dividends are payable on the whole from the first usual term of the funds in which the loan is made. Thus the lender receives dividends during the whole of the first year, although he only advances the money on the days appointed for payment of the instalments ; or, if he advances the whole at first, he is allowed a suitable discount, and he derives part of his profit from these allowances ; and, according to the terms of the loan, he is generally possest of several interests ; so much perhaps in a 3 per cent. fund, so much in a 5 per cent. fund, so much in a long annuity, and formerly so much in lottery tickets. After the loan is completed, these interests are assignable separately ; but when the loan is in progress, they may be either assigned separately or together. The separate parts, in this stage of the business, are called *scrip*, and their united amount is called *omnium*. In order to profit by a loan, it is necessary that the value of *omnium* at the time should be above par. This difference is called the *bonus* to the lenders. Instances, however, have occurred, in which the price of *omnium* fell below par, before the loan was completed. Lenders who do not pay their instalments at the appointed terms, forfeit their subscriptions. The Bank of England generally lends its aid in advancing some of the instalments.

The

The terms of the loan of 27 millions, contracted in June 1813, were,

L.110 in 3 per cent. reduced, <i>scrip</i> , valued at $57\frac{3}{4}$ ,	L.63	10	6
60 in 3 per cent. cons. <i>scrip</i> , valued at $56\frac{1}{4}$ ,	33	15	0
Long annuity, <i>scrip</i> , of 8s. 6d. for $46\frac{3}{4}$ years, at 14 years purchase,	-	-	5 19 0
<hr/>			
Value of <i>omnium</i> ,	-	-	L.103 4 6
Bonus to subscribers, besides discount for prompt payment,	-	-	3 4 6
<hr/>			

And the loan was payable by the following instalments.

Deposit at subscription,	-	-	L.10	0	0
July 23d,	-	-	10	0	0
August 20th,	-	-	15	0	0
September 17th,	-	-	10	0	0
October 22d,	-	-	15	0	0
November 19th,	-	-	10	0	0
December 17th,	-	-	10	0	0
1814. January 21st,	-	-	10	0	0
February 18th,	-	-	10	0	0
<hr/>					
			L.100	0	0
<hr/>					

Upon payment of the first instalment, a separate sheet is delivered to the original holder, for the sums paid on each component part of the loan, containing, on one side, a receipt for the sum paid, and on the other, a form of assignment. When a sale takes place, the original holder puts his name to the assignment, without filling it up, and delivers it thus blank-indorsed to the purchaser; and, in this manner, *scrip* and *omnium* pass from hand to hand, like bank notes. These receipts are so made out, before delivery from the Bank, as to shew how much money must be paid upon the several *scrips*, at each instalment.

Thus;

Thus, in the abovementioned loan, there was paid for each  
 £.1000 subscribed at the first instalment,

£.60 on the 3 per cent. reduced.

34 on the 3 per cent. cons.

6 on the long annuities.

---

£.100 being 10 per cent on the loan ; and like sums were payable at the instalments in July, September, November, and December, 1813 ; and in January and February, 1814 ; and one-half more, or 15 per cent. on the instalments in August and October, 1813. The holders of *scrip* must attend to the payment of these instalments at the Bank on the appointed days, under pain of forfeiture ; and when the last instalment is paid at its term, or the whole paid up at an earlier time, with allowance of discount, the *scrip* is converted into stock, and consolidated with the mass of the stock of the same name previously existing, from which it cannot afterwards be distinguished.

The value of *scrip*, after any given number of payments have been made thereon, is computed by deducting the amount of the remaining payments from the value of the stock at the market price.

---

#### SECTION IV.

##### MANNER OF TRANSFERRING STOCK.

AGREEMENTS for the sale of stock are generally made at the Stock Exchange, which is frequented by a set of middlemen called *Jobbers*, whose business is to accommodate buyers and

sellers with the exact sums they want.\* A Jobber must be possessed of considerable property in the funds ; and he declares a price, suppose  $59\frac{1}{4}$  or  $59\frac{3}{8}$  in the three per cent. cons. ; that is, he is willing to buy any sum from any person at  $59\frac{1}{4}$ , or sell him at  $59\frac{3}{8}$ . By this means, one who wishes to sell, suppose L.375 10s. and could hardly find a purchaser for that precise sum without the assistance of a Jobber, obtains his purpose, and the smallest sums are purchased and sold with the utmost facility. The Jobber's profit is generally  $\frac{1}{8}$  per cent. for which he transacts both a sale and a purchase ; and these persons often engage in no other stock speculation, but go away when the business of the day is over, possessed of the exact sum of stock they had in the morning.

The bargain, being agreed on, is carried into execution at the transfer office, at the Bank, or the South Sea house. For this purpose, the seller makes out a note in writing, which contains the name and designation of the seller and purchaser, and the sum and description of the stock to be transferred. He delivers this to the proper clerk,† and then fills up a receipt, a printed form of which, with blanks, is obtained at the office. The clerk, in the meantime, examines the seller's account, and if he find him possessed of the stock proposed to be sold, he makes out the transfer. This is signed in the book by the seller, who delivers the receipt to the clerk ; and upon the purchaser's signing his acceptance in the book, the clerk signs the receipt as witness. It is then delivered to the purchaser upon payment of the money, and thus the business is completed.

This business is generally transacted by brokers, who derive  
their

\* This is the proper acceptation of the term *Jobber*, in the language of the Stock Exchange. In common conversation, we generally understand by it, a speculator in the stocks.

† The letters of the alphabet are placed round the room, and the seller must apply to the clerk who has his station under the initial letter of his name. In all the offices, there are supervising clerks, who join in witnessing the transfer.

their authority from their employers by powers of attorney. Forms of these are obtained at the respective offices. Some authorize the broker to sell, others to accept a purchase, and others to receive the dividends. Some comprehend all these objects, and the two last are generally united. Powers of attorney, authorising to sell, must be deposited in the proper office for examination one day before selling. A stockholder acting personally, after granting a letter of attorney, revokes it by implication.\*

The person in whose name the stock is invested when the books are shut, previous to the payment of the dividends, receives the dividend for the half year preceding ; and, therefore, a purchaser, during the currency of the half year, has the benefit of the interest on the stock he buys, from the last term of payment to the day of transfer. The price of stock, therefore, rises gradually, *cæteris paribus*, from term to term ; and when the dividend is paid, it undergoes a fall equal thereto. Thus the 3 per cent. cons. should be higher than the 3 per cent. reduced, by  $\frac{1}{4}$  per cent. from 5th April to 5th July, and from 10th October to 5th January ; and should be as much lower from 5th January to 5th March, and from 5th July to 10th October ; and this is nearly the case. Accidental circumstances may occasion a slight deviation.

The dividends on the different stocks being payable at different terms, it is in the power of the stockholders to invest their property in such a manner as to draw their income quarterly.

The business of speculating in the stock is founded on the variation of the price of stock, which it probably tends, in some measure, to support. It consists in buying or selling stock, ac-

s s 2

cording

\* The rate of brokerage is 2s. 6d. per L.100 for buying or selling. A letter of attorney costs L.1 1s. 6d. The registration of a will, 2s. 6d. The transfer of Bank stock under L.25, costs 9s., above it, 12s.; of South Sea stock under L.100, 10s., above it, 12s.; of India stock, L.1 4s. Government stock is transferred without any charge.

ording to the views entertained by those who engage in this business of the probability of the value rising or falling.

This business is partly conducted by persons who have property in the funds. But a practice also prevails among those who have no such property, of contracting for the sale of stock, on a future day, at a price now agreed on. For example, A. may agree to sell B. L.10,000 of three per cent. stock, to be transferred in twenty days, for L.6,000. A. has in fact no such stock; but, if the price on the day appointed for the transfer, be only 58, he may purchase as much as will enable him to fulfil his bargain for L.5,800, and thus gain L.200 by the transaction: On the other hand, if the price of that stock should rise to 62, he will lose L.200. The business is generally settled without any actual purchase of stock, or transfer, by A. paying to B. or receiving from him, the difference between the price of in stock on the day of settlement, and the price agreed on.

This practice, which amounts to nothing else than a wager concerning the price of stock, is not sanctioned by law; yet it is carried on to a great extent: and as neither party can be compelled by law to implement these bargains, their sense of honour, and the disgrace attending a breach of contract, are the principles by which the business is supported. In the language of the Stock Exchange, the buyer is called a *Bull*, and the seller a *Bear*, and the person who refuses to pay his loss is called a *Lame Duck*; and the names of these defaulters are exhibited the Stock Exchange, where they dare not appear afterwards.

These bargains are usually made for certain days, fixed by a Committee of the Stock Exchange, called *settling days*, of which there are about eight in the year, viz. one in each of the months of January, February, April, May, July, August, October, and November; and they are always on Tuesday, Wednesday, Thursday, or Friday, being the days on which the Commissioners for the reduction of the national debt make purchases. The settling days in January and July are always the first days

days of the opening of the Bank books for public transfer ; and these days are notified at the Bank, when the consols are shut to prepare for the dividend. The price at which stock is sold, to be transferred on the next settling day, is called the price *on account*. Sometimes, instead of closing the account on the settling day, the stock is carried on to a future day, on such terms as the parties agree on. This is called a *continuation*.

All the business, however, which is done in the stocks *for time*, is not of a gambling nature. In a place of so extensive commerce as London, opulent merchants who possess property in the funds, and are unwilling to part with it, have frequently occasion to raise money for a short time. Their resource, in this case, is to sell for money, and to buy for account ; and although the money raised in this manner costs more than the legal interest, it affords an important accommodation, and it may be rendered strictly legal and recoverable.

The following statement has been given of the highest and lowest prices of the stocks, since 1720.

#### HIGHEST PRICES.

3 per cents.	June	1739,	L.107
4 per cents.	August	1791,	107 $\frac{1}{2}$
5 per cents.	Ditto	—	122 $\frac{3}{4}$
Bank stock,	February	1792,	219*
South Sea stock,	May	1768,	111
India stock,	December	1768,	276 $\frac{3}{4}$

#### LOWEST PRICES.

3 per cent. cons.	January	1798,	L.47 $\frac{3}{4}$
3 per cent. reduced,	June	1797,	47

3 per

\* The price of Bank stock here given is the highest price, previous to the late increase of dividend.

4 per cents.	January	1798,	L 59½
5 per cent. navy,	January	1798,	69¾
Bank stock,	January	1782,	91
South Sea stock,	February	1782,	62
India stock,	January	1784,	118½

In the time of the rebellion, 1745, the three per cents. fell to 75; but, during the war of that period, were generally above 80. After the peace of Aix-la-Chapelle, in 1748, they soon rose to par, and, in 1752, were at 106. In 1755, on the eve of the war, they fell to 90, and continued to fall during the war; and in 1762, were at 63, which was their lowest depression that war. During the following peace, they generally fluctuated between 80 and 90. They fell rapidly during the American war, and were about 60 in the years 1779 and 80, and so low as 54 in 1782. They remained low for about two years after the peace, and afterwards rose gradually, and attained the height of 96 in March, 1792; but fell rapidly after the commencement of the French revolution war, till they sunk to their lowest depression, 47, in January 1797. The other three per cent. stocks held nearly a similar course.

The four per cents., for some years after the American war, fluctuated between 70 and 80, and sometimes higher. In 1786, they rose to 96, and in August 1791, to 107½, their highest elevation. In January, 1798, they fell to 59½, their lowest depression.

The five per cents. which commenced in 1784, rose to 110 in the beginning of 1789; attained their highest elevation, 122, in August 1791; and sunk to 68¾, their lowest depression, in July 1798.

# APPENDIX II.\*

TABLE I.

AMOUNT of the different Funds on the 5th January 1793, and 1st February 1817, with the sums redeemed, and balances unredeemed; including the debts for Ireland, Germany, and Portugal, guaranteed by Britain, and the loan for the East India Company in 1812.

	Debt, Jan. 5. 1793.	Debt, 1st February, 1817.		
		Contracted.	Redeemed.†	Unredeemed
3 per cent. South Sea stock,	3,662,784	3,662,784	-	3,662,784

\* Besides this debt, L.799,300 was raised by debentures, (see page 126.)

## POSTSCRIPT.—FEBRUARY, 1818.

THERE was no loan in the year 1817. We have not yet materials for exhibiting a detailed account of the financial operations of that year : But, as was stated by the Chancellor of the Exchequer, in the House of Commons, that the increase of Exchequer Bills in circulation was little more than 12 millions, when about 15 millions\* had been applied to the reduction of the national debt ; being three millions more than the additional debt contracted. Most of the Exchequer Bills lately issued only bear interest at the rate of  $2\frac{1}{2}$ d. on L.100 per day ; and they are now issued at the low rate of 2d. per day.

The amount redeemed in the several stocks, payable in Britain, from 1st February to 1st October, 1817, was,

3 per cent. reduced,	-	-	L.9,351,796

CORRIGENDA

---

\* This seems to include a sum granted for the reduction of the debt of the navy, as the sinking fund that year was only about  $18\frac{1}{2}$  millions.

***CORRIGENDA ET ADDENDA.***

THE last paragraph, page 84, should be as follows:—

“ Britain and Spain were in a state of equivocal hostility  
“ from the beginning of the year 1739, or earlier, and war was  
“ declared between them in October of that year: But there  
“ do not seem to have been any loans for that war, except what  
“ were charged on the growing produce of the sinking fund,  
“ till 1741. War was not declared against France till March,  
“ 1744, though hostilities were carried on between the coun-  
“ tries long before.”

PAGE 102.—The war in Queen Anne's reign is stated as  
commencing in 1701; and, therefore, to have been of 12 years  
duration. The declaration of war was not made till May 1702;  
but preparations for it were begun the year before, in King  
William's reign. An alteration of the year would require the  
alteration of some figures, but would not much affect the ge-  
neral result.

PAGE 283.—The last paragraph of Note XXIV., instead of  
“ If the sinking fund be 1-60,” &c. should be as follows: “ If  
“ the loan be funded in the 3 per cents. at a capital propor-  
“ tionable to the rate of interest, and with a sinking fund of 1  
“ per cent. on the capital funded, the periods required for re-  
“ demption are,” &c.
